Microsoft 365 admin center: Email notifications for service health issues available in multiple languages

Microsoft 365 will now send **service health email notifications in your preferred language for issues requiring action**, making it easier for admins to understand and respond.

The screenshot shows the Microsoft 365 Admin Center interface. The left sidebar includes links for Copilot, Users, Devices, Teams & groups, Roles, Billing, Support, Settings, Reports, and Health. The 'Service health' link is highlighted with a yellow box. The main content area displays the 'Service health' page with sections for 'Issues for your organization to act on' and 'Active issues Microsoft is working on'. A large yellow box highlights the 'Customize' button in the top right. The 'Customize' modal is open, showing options for 'Page view' (Email selected), 'Send me email notifications about service health' (checked), 'Primary email address' (TChaniyari@RDXSHDMCTest.onmicrosoft.com), 'Other email addresses' (unchecked), and 'Translate emails to [language]' (checked). The modal also lists 'Include these issue types' (Incidents, Advisories, Issues in your environment that require action), 'Include these services' (Developer Tools, Dynamics 365 Apps, Exchange Online, Microsoft 365 apps, Microsoft 365 for the web, Microsoft 365 suite, Microsoft Bookings, Microsoft Clipchamp, Microsoft Defender XDR, Microsoft Entra, Microsoft Forms, Microsoft Intune), and a 'Save' button.

SharePoint Governance: Microsoft 365 Copilot customers now have SharePoint Advanced Management capabilities

Microsoft 365 Copilot licenses now include SharePoint Advanced Management capabilities to enhance oversharing management and restrict access controls.

Admins should utilize SharePoint Online PowerShell to generate the oversharing baseline report for cleanup and remediation efforts.

The screenshot shows the SharePoint admin center interface. At the top, a banner indicates "Your SharePoint Advanced Management subscription is enabled." The left navigation menu includes options like Home, Sites, Containers, Policies, Settings, Content services, Migration, Reports, Content solutions, Advanced (which is expanded), and More features. The "Advanced management" link under the Advanced section is highlighted with a yellow box. The main content area is titled "Advanced management" and describes it as a tool for managing and governing SharePoint and OneDrive with advanced tools and enhanced Microsoft 365 secure collaboration abilities. It also links to "Learn more about SharePoint Advanced Management". Below this, a section titled "What's included" lists various features with their locations and purposes:

Feature ↑	Location	Purpose
Block download policy for SharePoint and OneDrive	Microsoft PowerShell	Prevent download for both external and internal users
Change history	Reports > Change history	Find who made particular site or organization setting changes and when
Collaboration insights	Reports > Collaboration insights	Get insights about how users in your organization are collaborating in SharePoint and OneDrive in the last 7 days
Conditional access policies for SharePoint and OneDrive	Microsoft Entra conditional access	Control whether users can access sensitive sites based on conditions like location or operating system
Data access governance reports	Reports > Data access governance	Discover potential oversharing and keep track of sites that have sensitive files
Default sensitivity labels for document libraries	Library settings and Create document library panel	Help make sure sensitive project files are appropriately labeled
OneDrive access restriction	Policies > Access control > OneDrive access restriction	Allow only particular groups of users to use OneDrive
Recent actions	Active sites > Recent actions	Review recent site changes you made
SharePoint access restriction	Policies > Access control > SharePoint access restriction	Allow only particular groups of users to use SharePoint
Site lifecycle management	Policies > Site lifecycle management	Automate tasks across the life cycle of your sites
Site-level access restriction	Policies > Access control > Site-level access restriction	Allow admins to restrict access to specific SharePoint sites and their content

Microsoft 365 admin center: Configure end-users for Frontier features in Microsoft 365

Microsoft 365 Admins can now **configure Frontier features to give selected users early access to experimental AI features** in their own tenants.

Admins need to identify users who would benefit from this access and manage their participation through new controls in the Microsoft 365 Admin Center.

The screenshot shows the Microsoft 365 Admin Center interface. On the left is a navigation sidebar with various sections like Home, Copilot, Overview, Agents & connectors, Billing & usage, and Settings. Under Settings, there are sub-sections for Users, Devices, Teams & groups, Billing, and Reports. The main content area is titled 'Settings' and shows the 'User access' tab selected. It lists several items under 'Manage user access to Copilot in different products and services', including 'Copilot Frontier', 'Copilot in Edge', 'Copilot in Viva Engage', etc. The 'Copilot Frontier' item is highlighted with a yellow box. To the right, a modal window titled 'Turn on Frontier features' provides information about the program and allows admins to choose which groups of users get access to the Frontier program for Microsoft 365 Copilot app and web/mobile apps for Word, PowerPoint, Excel. It includes radio buttons for 'No access', 'All groups of users', and 'Specific user groups', with 'No access' currently selected. A 'Select groups' dropdown is also present.

Microsoft 365 admin center: Extending Copilot Chat to Microsoft 365 apps

Microsoft 365 is **introducing Copilot Chat as a side-by-side feature in Word, Excel, PowerPoint, Outlook, and OneNote**, available to users with or without a Copilot license.

If you want users without a Copilot license to access this feature, configure the "Pin" setting in the admin center.

The screenshot shows two side-by-side windows of the Microsoft 365 Admin Center. Both windows are titled "Pin Microsoft 365 Copilot Chat".
The left window displays the configuration for "On the navigation bar":

- Pin Copilot Chat to the navigation bar (recommended) (radio button)
- Do not pin Copilot Chat to the navigation bar (radio button selected)
- Allow users to be asked whether they want to pin it (checkbox checked)

The right window displays the configuration for "On the Windows taskbar":

- Pin Copilot Chat to the navigation bar (radio button selected)
- Do not pin Copilot Chat to the navigation bar (radio button)

Both windows include a "Save" button at the bottom right and a "Learn more about how this setting works" link. The background of the admin center shows a blurred view of the Microsoft 365 interface.

Microsoft 365 admin center: Copilot Custom Dictionary for Enhanced Transcript Accuracy in Teams

Tenant administrators can now upload a **Custom Dictionary** through the M365 Admin Portal's Copilot Settings page to include tenant-specific terminologies.

- This enhancement **improves entity recognition in Teams meeting transcripts**, benefiting both Recap and Copilot's understanding of the content.

The screenshot shows the Microsoft 365 Admin Center interface. On the left, the navigation pane is open with the 'Copilot' section selected. Under 'Copilot', 'Settings' is also selected. In the main content area, the 'Settings' page for Copilot is displayed. A table lists a single custom dictionary entry: 'Copilot Custom Dictionary'. The 'Name' column shows the dictionary name, and the 'Description' column indicates it manages custom dictionaries for the organization. The 'Applies to' column shows 'Copilot in Microsoft Teams' and 'Microsoft Teams'. To the right of the table, a modal window titled 'Upload a custom dictionary' is open. It contains instructions to download a template, upload a CSV file, and select a target language. The 'Upload' button is at the bottom of the modal.

Microsoft 365 admin center: Admin controls and user file uploads for agent knowledge sources

Microsoft 365 Copilot will soon allow users to **upload files as a knowledge source to agents**, with admins managing these through Microsoft 365 and SharePoint admin centers.

The screenshot shows the Microsoft 365 Admin Center interface. On the left, there's a navigation sidebar with various admin centers like Home, Copilot, Users, Devices, etc. The main area is titled 'Integrated apps' under 'Home > Integrated apps'. It displays a list of 'Shared agents'. One agent, 'Contoso GPT', is selected. To its right, there's a detailed view of the agent, including its description ('A trusted source for workplace information'), creation date ('Mar 10, 2025'), and publisher ('XYZ Corporation'). A yellow box highlights a modal dialog titled 'Delete Contoso GPT?' which contains a message: 'No one will be able to find, use, or update the agent, including the agent's publisher. This action is permanent.' A blue 'Delete' button is visible at the bottom of the dialog.

Microsoft 365 admin center: New admins controls for Copilot Search management

IT admins can now configure and customize Microsoft 365 Copilot Search, enhancing search experiences and productivity.

- Specific admin roles are required to access new settings.

The screenshot shows the Microsoft 365 Admin Center interface. On the left, there's a navigation sidebar with various admin centers like Copilot, Overview, Discover, Agents & Connectors, Search, Settings, Users, Devices, Teams & groups, Roles, Resources, Billing, Support, Settings, Setup, Reports, and Health. The main content area is titled 'Search' and contains a sub-section for 'Acronyms'. It lists several acronyms such as AAD, ABC, ACID, AD FS, AD, AI, API, ASP, B2B, and B2C, each with a status (Published or Excluded), stands for (e.g., Azure Active Directory, Active Directory), and a description. A modal window titled 'Add an acronym' is open on the right, showing fields for Acronym (NPS), Stands for (Net Promoter Score), Description (NPS is a satisfaction metric), and Reference link (https://aka.ms/nps). Below the modal, there's a preview section showing the search results for 'NPS' and 'Net Promoter Score'.

Microsoft 365 Copilot App: Copilot can generate an audio overview of a notebook

Copilot can **turn the referenced files in a notebook into a dynamic audio overview**, transforming them into a listening experience that's easy to follow.

- This capability is only available in English currently.

The screenshot shows the Microsoft 365 Copilot application interface. On the left, there's a sidebar with icons for Search, Chat, Agents, Conversations, Pages, Notebooks (which is selected and highlighted in blue), Create, Apps, and Admin. The main area is titled 'Your notebooks' and shows a notebook titled 'Dolphins research'. Below the notebook title, there's a button to 'Add Copilot instructions' and a note to 'Tell Copilot how to respond in this notebook'. A large input field says 'Ask Copilot about your references or another topic for this notebook.' with a plus sign to add more. At the bottom of this section is a yellow button labeled 'Get audio overview' and a white button labeled 'New page'. Below this, there are tabs for 'References' (which is selected) and 'Chats'. Under 'References', there are two items: 'Dolphins' (a Word document) and 'The Diverse World of Dolphins' (a PowerPoint presentation). Both items have a timestamp of 'Just now' and three dots for more options. At the bottom right of the interface, there's a '+ Add reference' button.

Copilot in Outlook: Schedule from email with Copilot (DoD)

Copilot is adding the ability to start **scheduling meetings right from an email conversation**. It saves you time and effort by generating a meeting invite that's ready for you to review and send.

When you click on "Schedule with Copilot" a meeting form will appear with the following generated from Copilot:

- Meeting title
- Agenda
- Conversation summary
- Pre-filled attendee list from the email thread
- Attachment of the original email thread

The screenshot shows the Microsoft Outlook interface. At the top, the ribbon is visible with tabs for Home, View, and Help. The Home tab is selected. Below the ribbon, there is a toolbar with icons for New (envelope), Ignore (red speechmark), Block (person icon), Delete (trash can), Archive (green folder), Report (shield), Reply (left arrow), Reply all (double left arrow), Forward (right arrow), Meeting (blue square with a person icon), and Schedule with Copilot (purple square with a person icon). The main area of the window displays an email titled "Tulip Growth Training Session Plan" from "Joni Sherman". The email contains fields for date (2024-08-15), time (12:00), duration (1 hour), repeat settings (All day, Don't repeat), and event type (In-person event). A "Teams meeting" toggle is also present. Below the email, a small preview window shows the generated meeting invitation with the subject "Invitation to Tulip Gr... Outlook Item" and an agenda list. The agenda includes: Introduction to Tulip Cultivation, Soil Preparation and Planting, Watering and Fertilization, Pest and Disease Management, and Bloom Maintenance and Aftercare. To the right of the email, a calendar view shows the date Thursday, August 15, 2024, with a green bar indicating availability from 12:00 to 12:30. At the bottom right, there are icons for Joni Sherman (JS) and Jim Edwards (JE).

Viva Engage: Manage GDPR requests in Engage admin center

The Remove User feature - previously available in the legacy Microsoft Yammer admin center - is being renamed and **relocated to the Microsoft Engage admin center**, streamlining the process and reducing reliance on the legacy Yammer admin center. This update centralizes compliance actions in one modern interface.

After this rollout, **the feature will be called Manage GDPR data subject requests** and will continue to support GDPR compliance by allowing verified admins and network admins to fulfill data subject requests directly from the new location.

The screenshot shows the 'Data management' page in the Microsoft Engage Admin Center. It includes sections for 'Export tenant data', 'Export data for a single user', 'Export user list', and a highlighted 'Manage GDPR data subject requests' section. The 'Manage GDPR data subject requests' section contains a search bar, a user profile for Lidia Holloway, and three radio button options for data retention: 'Permanently remove this user, but retain their messages.', 'Permanently remove this user, and remove their messages.', and 'Erase this user. Wipe their name and personal information, but leave their messages. (Can't be undone after 14 days)'. Buttons for 'Cancel' and 'Remove user' are at the bottom.

Microsoft Teams: Automatically set work location by connecting to a Wi-Fi network

Microsoft Teams will soon be able to **automatically set users' work locations when they connect to their organization's Wi-Fi.**

Automatic work location updates will be off by default. We recommend that admins enable this feature, which can be done in PowerShell using the *New-CsTeamsWorkLocationDetectionPolicy* cmdlet.

- This policy is also used to enable or disable automatic work location updates when connecting to bookable desks.
- If you have already enabled location updates for bookable desks, this feature will also be enabled as well.

For reference only: How to set your work location manually

Microsoft Teams: Allow recording and transcription by default in Teams calling global policy

Microsoft 365 is updating the **Teams Calling global policy** to allow users to transcribe or record calls. This change enhances access to AI-powered features (like Calls Recap and Calling Copilot).

Recording and transcription will be enabled by default for the following tenants:

- New tenants with newly created global Teams meeting policies
- Existing tenants without customized Teams meeting policies

This change will not impact existing custom calling policies or modified global calling policies.

The screenshot shows the Microsoft Teams admin center interface. The left sidebar has a 'Settings & policies' section with options like Teams, Users, Teams devices, Teams apps, Meetings, Voice, and Locations. The main content area is titled 'Calling settings' under 'Global (Org-wide default) settings \ Calling settings'. It includes a note about managing calling features for guest users. The 'General' section contains three toggle switches: 'Make private calls' (on), 'Cloud recording for calling' (on, highlighted with a yellow box), and 'Transcription' (on). Each setting has a link to related policies.

[Configure call recording, transcription, and captions in Teams](#)

Microsoft Teams: Support for making a silent test call

IT administrators will soon be able to run silent test calls in Microsoft Teams to check network readiness and detect issues proactively.

Admins can target specific subnets for these tests; when initiated, silent, non-disruptive calls will be performed on clients that meet the following conditions:

- Tests will only run on idle Teams desktop clients, where the user is not in a call.
- Tests will only run on a user's client if the user is licensed for Teams Premium.
- Tests will only be performed on devices connected to the subnet being targeted.

The screenshot shows the Microsoft Teams admin center interface. On the left, there is a navigation sidebar with various categories like Meetings, Voice, and Analytics & reports. The 'Analytics & reports' section is highlighted with a yellow box. To its right, the main content area displays an announcement about the new streamlined experience for chats, teams, and channels, which is expected to roll out to GA by late March 2025. Below the announcement, there are sections for Best practice configurations (with a note: 'No action required'), Self-help diagnostics, and Authentication.

For reference only: Configuration of silent tests will be available in the "Analytics & reports" menu

Teams Events: Upgrade to Meeting Recording Organizer policy setting by June 30, 2025

With this update, the **RecordingInitiator** value will be retired from the **Set-CsTeamsRecordingRollOutPolicy cmdlet**. In addition, the **MeetingRecordingOwnership** parameter overall will be retired from the cmdlet as well.

Going forward, **MeetingOrganizer** will be the default value for Recording Ownership, meaning that by default, recordings will be saved to the meeting organizer's OneDrive regardless of who started the recording.

- When the organizer does not have a OneDrive account, the following fallback logic will be in place to determine the recording owner: *Organizer -> Co-organizer(s) -> Initiator -> Async Media Storage (AMS)*

PowerShell

Set-CsTeamsRecordingRollOutPolicy -Identity OrganizerPolicy **-MeetingRecordingOwnership** RecordingInitiator

Microsoft introduces new enhancements to PowerPoint that allow users to create more engaging stories by incorporating video elements seamlessly into their presentations.

Exchange Online

Updated the rollout schedule for Exchange Online Tenant Outbound Email Limits

The Tenant External Recipient Rate Limit (TERRL) is the **maximum number of external recipients a tenant in good standing can send to per day (24-hour sliding window)**. External recipients are those whose email address domains are **not** an accepted domain in the tenant.

- The TERRL establishes base-line outbound sending limits for all tenants, but additional current and future restrictions can also occur due to factors like suspicious sending behavior, sending spam, fraudulent or excessively late payments.
- The rollout of the TERRL for tenants with more than 500 licenses has been paused.

Phase	Enable enforcement for tenant group	Rollout start date
1	Tenants with <= 25 email licenses	April 3, 2025
2	+ additional tenants with <= 200 licenses	April 18, 2025
3	+ additional tenants with <= 500 licenses	April 28, 2025
4	+ all remaining tenants	Paused

Important Update to the Get-FederationInformation Cmdlet in Exchange Online

The Get-FederationInformation cmdlet in Exchange Online will be updated **to restrict domain data returned to only those explicitly passed as parameters**, affecting scripts or tools relying on default retrieval of all federated domains. **Review automation, scripts, or tools using the cmdlet to ensure required domains are specified.**

Current behavior:

```
Get-FederationInformation -DomainName contoso.com
```

Returns:

```
TargetApplicationUri : outlook.com
DomainNames        : { contoso.com, contoso.net, mail.contoso.com, ... }
TargetAutodiscoverEpr : https://autodiscover-
s.outlook.com/autodiscover/autodiscover.svc/WSSecurity
TokenIssuerUris     : {urn:federation:MicrosoftOnline}
IsValid            : True
ObjectState         : Unchanged
```

Upcoming change:

```
Get-FederationInformation -DomainName contoso.com
```

Will return:

```
TargetApplicationUri : outlook.com
DomainNames        : { contoso.com }
TargetAutodiscoverEpr : https://autodiscover-
s.outlook.com/autodiscover/autodiscover.svc/WSSecurity
TokenIssuerUris     : {urn:federation:MicrosoftOnline}
IsValid            : True
ObjectState         : Unchanged
```

This change enhances the security and privacy of tenant information.

Resharing to external users required after enabling Microsoft SharePoint integration with Microsoft Entra B2B

Microsoft is changing how SharePoint and OneDrive integrate with Entra B2B, impacting external user access to content shared via older links.

Notify users that previously shared links will no longer work post-integration, and plan for multi-factor authentication for external users.

Sorry, something went wrong

This organization has updated its guest access settings. To access this item, please contact the person who shared it with you and ask them to reshare it with you.

Power Platform

Power Platform: Manage table list views with security roles

Admins can now **manage table list views by assigning system views** to users based on their security roles in Power Platform.

View settings

Security roles for Active Accounts in the United States view X

Security roles

You can assign security roles to a view to accommodate how different people in your organization need to interact with the same data in different ways. Applying security roles to views ensures users get access to only the views they need. These settings will not apply to the default public view. [Learn more](#)

Power Platform: Agent Level Message Capacity Limit

A new **cost control feature** in the Power Platform admin center helps manage Copilot Studio agents by offering **visibility, control, capacity optimization, and operational efficiency**.

The screenshot shows the Power Platform Admin Center interface. On the left, there's a sidebar with various navigation options like Home, Actions, Manage, Security, Copilot, Monitor, Deployment, Licensing, Support, and Dev tools. The main area is titled 'Copilot Studio Agents' and displays a table of agents with columns for Name, State, Status, Environment, Message Limit, Billed Messages, and Non-billed Messages. The 'Customer Intent Agent' is selected, showing it's On, Within Limit, running in ContosoTest01 environment with a 10000 message limit, 7500 billed messages, and 0 non-billed messages. To the right, there's a detailed configuration panel for the 'Customer Intent Agent'. It includes sections for 'Capacity limit' (set at 10000 messages), 'Notification and throttling thresholds', and 'Overage notification' (set at 80%). A note says 'Percent value can only be between 50-100%'. At the top of this panel, it says 'Adjust usage limits and notification threshold for this agent running in environment: ContosoTest01 Draw from tenant pool'.

Agents	State	Status	Environment	Message Limit	Billed Messages	Non-billed Mes
Customer Intent Agent	On	Within Limit	ContosoTest01 Draw from tenant pool	10000	7500	0
Customer Knowledge Management Agent	On	Within Limit	ContosoTest02	5000	3200	0
IT Helpdesk	On	Within Limit	EnvGHITest03 Draw from tenant pool	15000	0	12000
Jakes Agent	On	Within Limit	EnvDEFTest04 Draw from tenant pool	2000	500	0
Email Helper Agent	On	Within Limit	EnvABCTest05 Draw from tenant pool	5000	0	0
Tax Expert	Off	Over Limit	EnvOPSTest06 Draw from tenant pool	6000	6500	4000

Microsoft Copilot Studio: Install managed agents from Microsoft

Microsoft 365 announces the ability **to browse and install custom agents from templates in Copilot Studio**, enhancing the ease of deploying and customizing agent functionalities.

The screenshot shows the Microsoft Copilot Studio interface. On the left, there's a vertical sidebar with icons for Home, Create (which is selected and highlighted in blue), Agents, Flows, Tools, and an ellipsis. The main area is titled 'Create' and features a 'New agent' button. Below it, a prominent button labeled 'Install a managed agent' is highlighted with a yellow box. To the right, there are six cards representing different managed agents:

- Awards and Recognition (Managed agent)
- Document Processor (Preview) (Managed agent)
- Factory Operations (Preview) (Managed agent)
- Leave Management (Managed agent)
- Store Operations (Managed agent)
- Wellness Check (Preview) (Managed agent)

Power BI (Fabric)

Microsoft Fabric: Workspace inbound/outbound access protection will be available by default (preview)

Microsoft Fabric is **introducing Preview features for enhanced security**, enabling workspace admins to use **Workspace-level private links and Outbound access protection** to secure inbound and outbound connectivity.

Tenant admins may choose to disable these features for workspace admins if desired.

The screenshot shows the Microsoft Fabric Admin portal's Tenant settings page. On the left is a sidebar with various navigation options like Home, Create, Browse, OneLake, Apps, Metrics, Monitor, Learn, Real-Time, Workloads, Workspaces, Custom branding, Fabric identities, and Featured content. The main area is titled 'Admin portal' and shows 'Tenant settings' with a 'New' badge. It lists several configuration items: Usage metrics, Users, Premium Per User, Audit logs, Domains (New), Workloads, Tags (New), Capacity settings, Refresh summary, Embed Codes, Organizational visuals, Organizational themes (preview), Azure connections, Workspaces, Custom branding, Fabric identities, and Featured content. A specific section, 'Configure workspace level outbound network rules' (also with a 'New' badge), is highlighted with a yellow border. This section contains a note: 'With this setting on, workspace admins can configure outbound access protection in workspace settings. Turning off this tenant setting also turns off outbound access protection in all the workspaces in the tenant.' Below the note is a toggle switch set to 'Enabled'. A yellow callout box below the note says 'This setting applies to the entire organization'. At the bottom of the page are 'Apply' and 'Cancel' buttons.
