Microsoft 365 – General Updates

Microsoft Loop: Retirement of Loop component rendering in Word for the Web

Support for rendering Loop components in Word for the web as interactive elements is being retired; after the retirement, they will be displayed in documents as read-only placeholders.

Loop component rendering in Microsoft Word

No public documentation at the time of writing

User Awareness ☒

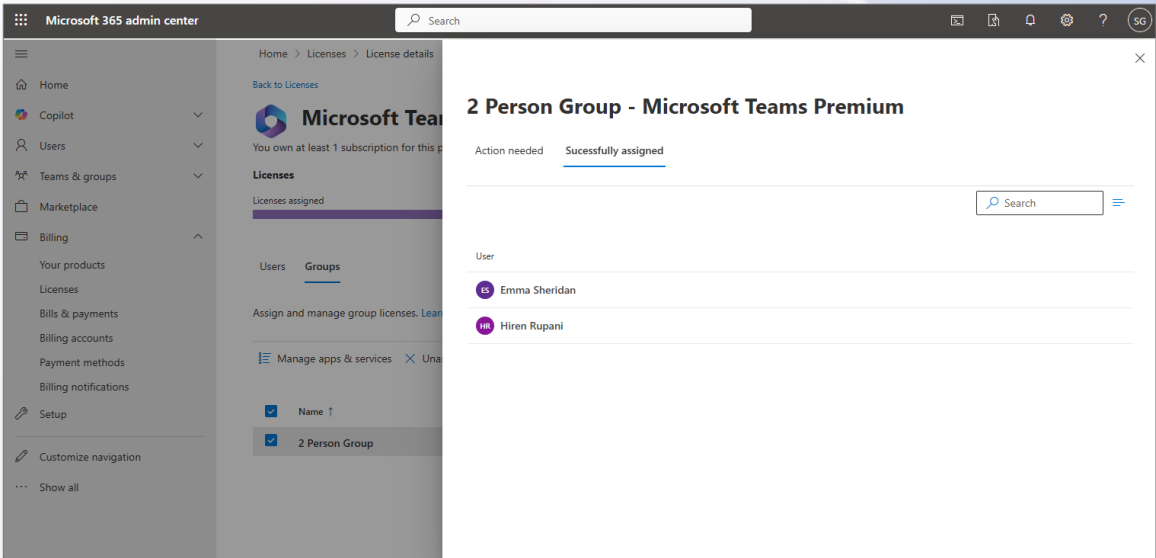

Admin Relevant ☐

Microsoft 365 Admin Center: Updates to user and group assignment views

The Microsoft 365 Admin Center is updating its licensing pages to **separate direct and group-based license assignments**, improving clarity and performance.

No immediate action is required, but it's recommended to review internal processes that assume all assignments appear in the User tab.

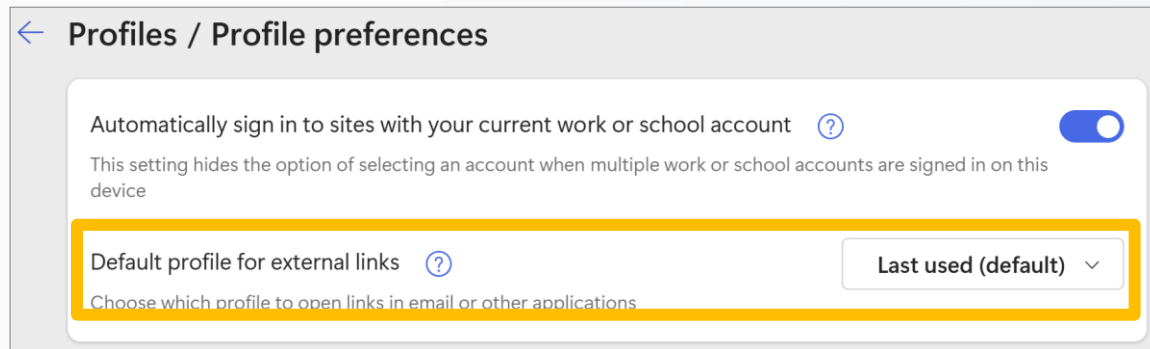

Group license assignment in the Microsoft 365 Admin Center

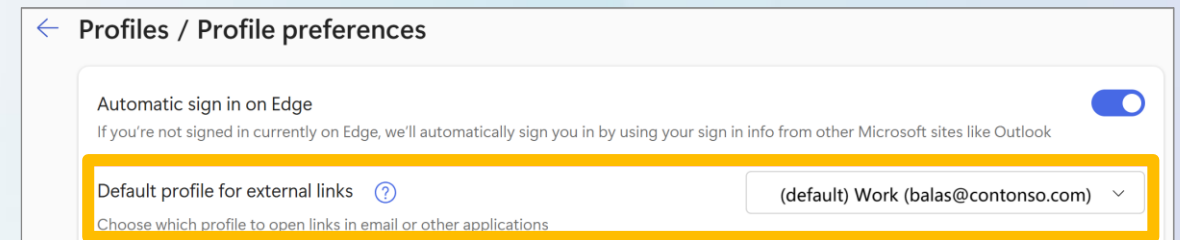

Microsoft Edge: Primary work profile will open external links by default

Microsoft Edge will now default to the Primary work profile for opening external links for users signed in with Microsoft Entra ID.

Admins can manage this behavior through the `EdgeOpenExternalLinksWithPrimaryWorkProfileEnabled` policy.

Before: Edge settings to open External Links using Last used (default)

After: Edge settings to open External Links using the Work profile

Microsoft Places: Built in admin roles support

Microsoft Places is introducing Role-Based Access Control (RBAC) for efficient administrator management. Places will support the following roles through Exchange Online and Microsoft Entra:

- **Places administrator** (available in Entra)
- **Building administrator** (available in Exchange)
- **Desk administrator** (available in Exchange)

Organizations using Microsoft Places should plan for role assignments to support onboarding and operations.

Microsoft 365 Admin Center: New multi-admin notifications for Microsoft 365 Backup

Microsoft 365 is introducing **multi-admin notifications for Microsoft 365 Backup, allowing the configuration of centralized notifications for key backup events** to enhance visibility and administrative awareness.

Notifications will be triggered for important backup events, such as backup disablement, offboarding, restore initiation, or policy updates. You'll be able to configure the notification list in one of four ways:

- Include all global and Microsoft 365 Backup admins
- Include only global admins
- Include only Microsoft 365 Backup admins
- Define a custom list (individual users, distribution lists, or security groups)

Action is required to configure the backup notification list with appropriate stakeholders.

Microsoft 365 Backup: Protection unit-level offboarding (Preview)

Microsoft 365 Backup is introducing a feature for **deleting backups at the protection unit level**, enabling efficient storage management and compliance with GDPR requests.

No immediate action is required, but reviewing current backup configurations may be beneficial.

	Backup Active	Offboarding		
		Days 0-30	Days 31-90	Day 91+
New Backups taken	Yes	No	No	No
Backups billed	Yes	Yes	No	No
Restores Allowed	Yes	Yes	No	No
Backups visible if re-enabled	Yes	Yes	Yes	No
Backups still exist	Yes	Yes	Yes	No

For reference only: Microsoft 365 Backup offboarding

OneNote now offers improved multi-monitor support, enhancing user productivity and making it easier to organize and manage notes across multiple screens.

[Get to Your Notes Faster with the New Most Recently Used \(MRU\) Notebook List](#)

The new Most Recently Used (MRU) feature in Microsoft 365 enhances note accessibility by enabling quicker access to your most recently used notes across devices.

[Graph-Based AI System for Real-Time Detection and Rollback of Performance Regressions](#)

Microsoft has introduced a graph-based AI system for proactive real-time detection and rollback of malicious behavior in Microsoft 365 environments.

[Transforming Business with Microsoft 365 Copilot and Clipchamp](#)

Microsoft 365 is integrating AI capabilities to enhance business productivity, streamline operations, and foster innovation by harnessing the power of advanced technology solutions.

[Microsoft 365 data residency offerings now available in Chile](#)

Microsoft 365 has expanded its data residency offerings to include Chile, enhancing data management and compliance for local customers.

[What's new in Microsoft Planner – June 2025](#)

Microsoft Planner has introduced loop components, new graphs in the Teams app, updates for Windows users, and enhancements to its Android integrations.

[What's new in Microsoft Planner – May 2025](#)

New updates in Microsoft Planner enhance user experience with improved collaboration features, increased productivity tools, and customizable task management options.

[Microsoft Stream and Microsoft Clipchamp: Brand unification update for Microsoft 365 video](#)

Microsoft is unifying the brands of Microsoft Stream and Clipchamp to create a cohesive video experience for Microsoft 365 users.

[Microsoft Stream and Microsoft Clipchamp: Brand unification update for Microsoft 365 video](#)

Microsoft Stream and Clipchamp are aligning their branding, offering a unified video experience within the Microsoft 365 ecosystem.

[What's New in Microsoft EDU, ISTE Edition June 2025](#)

Microsoft EDU introduced new tools and updates aimed at enhancing learning experiences, including improved accessibility features, integrations, and innovative resources for educators and students.

[A Seamless Shift: New Outlook for Windows Coming to Microsoft 365 Education](#)

Microsoft 365 is introducing a new Outlook for Windows, optimized for educational institutions to enhance productivity and streamline communication.

Microsoft 365 Copilot

Copilot Memory and Copilot Personalization

New capabilities enhance user-specific context and control in Microsoft 365 Copilot:

Copilot:

- Users can manage their **Copilot memory** by deleting past chats or switching to **temporary chat** mode for sensitive interactions, ensuring privacy and control.
- With **personalization**, users can define their communication style (tone, length, greetings) via custom instructions, enabling Copilot to generate responses that reflect their individual voice and evolving role context.
- Admins can enable/disable memory tenant-wide via Microsoft 365 Copilot settings.

Settings

Microsoft 365 Copilot Tuning admin guide (Preview)

Microsoft 365 Copilot Tuning enables organizations to securely fine-tune large language models (LLMs) using tenant-specific data, and to deploy declarative agents based on those fine-tuned models to Microsoft 365 Copilot.

- Administrators retain full control over who can fine-tune models, how they're published, and how they're governed throughout their lifecycle.

Standard and Priority access to Copilot capabilities

Starting early August, **Copilot Chat users without a Microsoft 365 Copilot license will get standard access to tools like image generation and file upload based on service capacity.**

- Users will be notified via an in-product message if the service capacity is not available.
- Tasks in progress will not be interrupted if service capacity becomes unavailable.
- Microsoft 365 Copilot users are offered priority access to these tools.

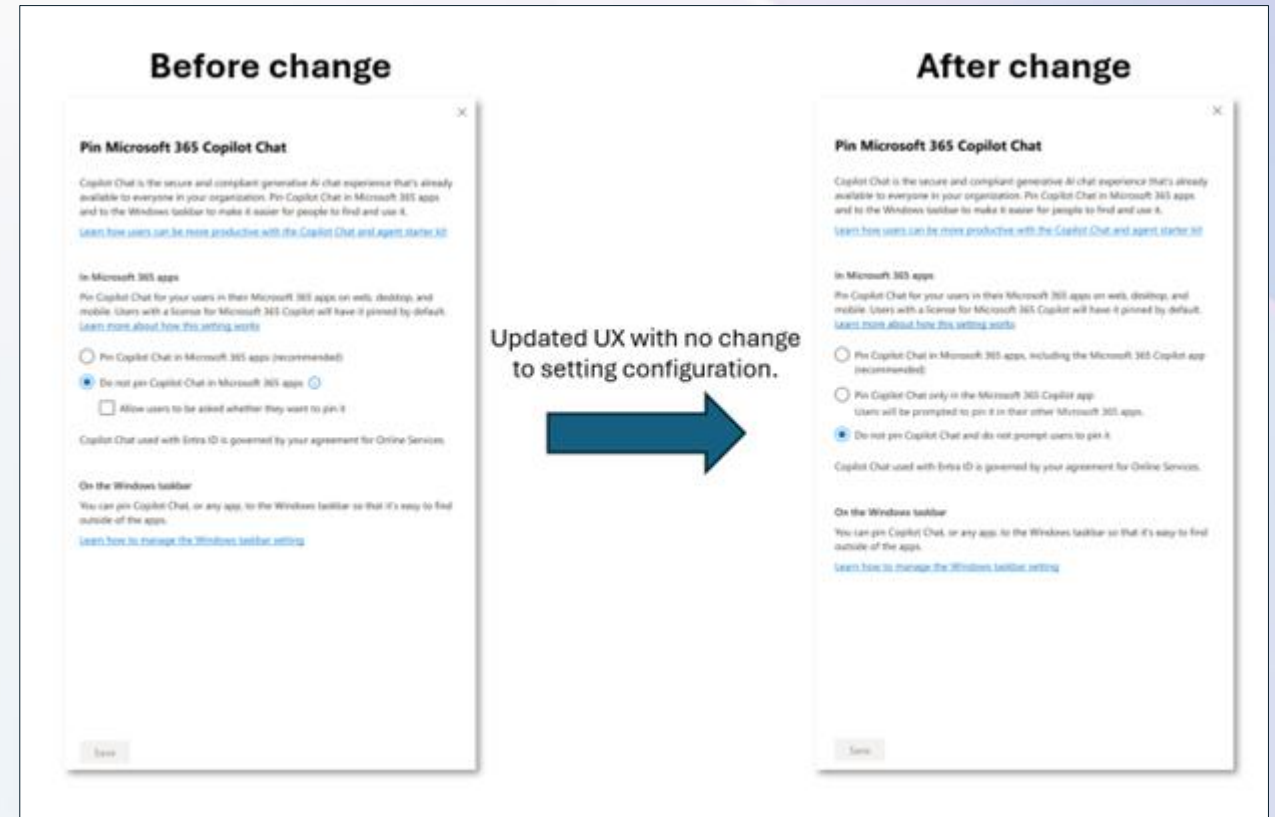

Simplifying Copilot Chat in the Microsoft 365 Copilot app

Microsoft is simplifying the behavior of Copilot Chat in the Microsoft 365 Copilot app for users without a Microsoft 365 Copilot license. **This update applies to tenants who have the “Pin Microsoft 365 Copilot Chat” setting on the following configuration:**

- *“Do not pin Copilot Chat in Microsoft 365 apps” is selected.*
- *“Allow users to be asked whether they want to pin it” is not selected.*

With this update, for tenants with this setting configuration, there is no change to the configuration or the end user experience. **The only change is that for users without Microsoft 365 Copilot licenses, the text of the pinning options will be updated in the settings pane.**

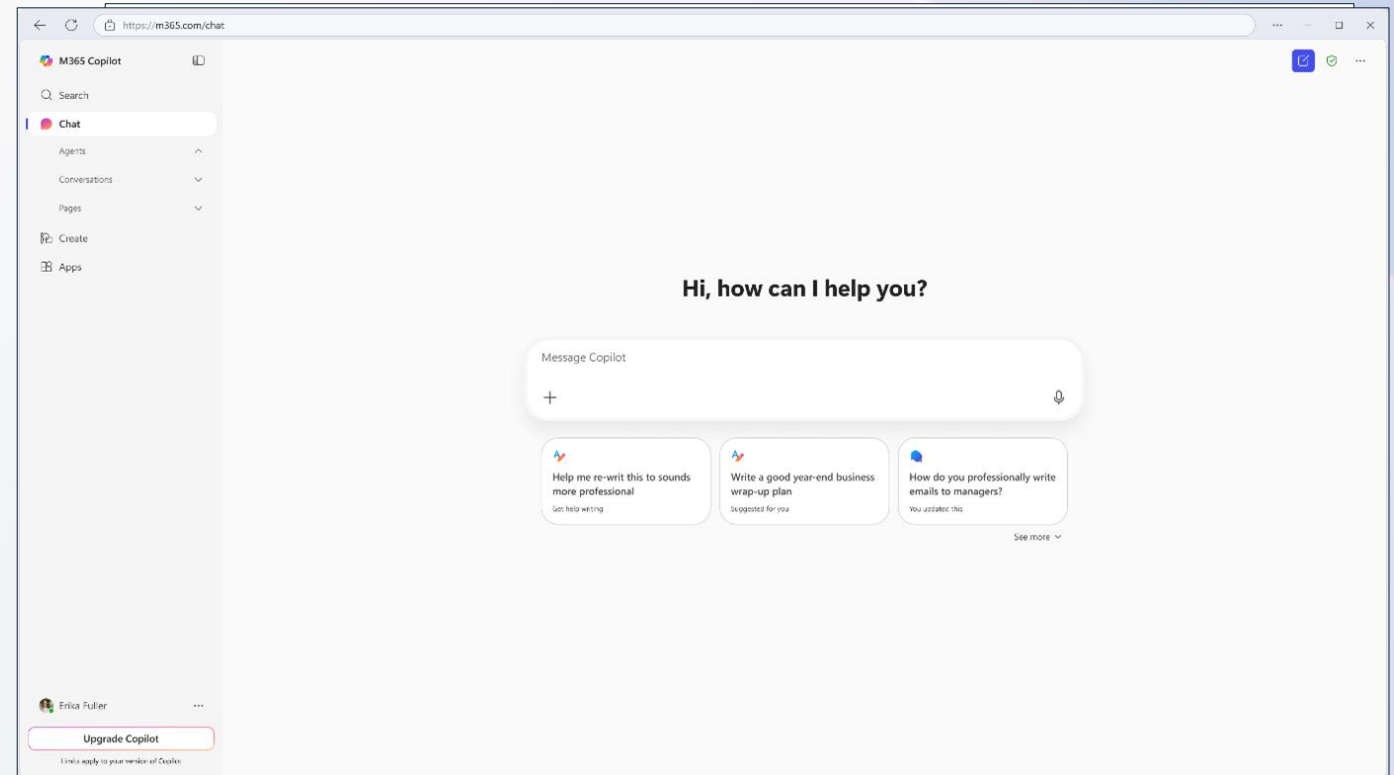

Simplifying Copilot Chat in the Microsoft 365 Copilot app

Microsoft is simplifying the behavior of Copilot Chat in the Microsoft 365 Copilot app for users without a Microsoft 365 Copilot license. **This update applies to tenants who have the “Pin Microsoft 365 Copilot Chat” setting on the following configuration:**

- “Do not pin Copilot Chat in Microsoft 365 apps” **is selected.**
- “Allow users to be asked whether they want to pin it” **is selected.**

With this update, **the pinning setting for Copilot Chat will no longer apply to the Microsoft 365 Copilot app**, allowing users without a Copilot license to see Chat as the default module with an entry point in the navigation menu.

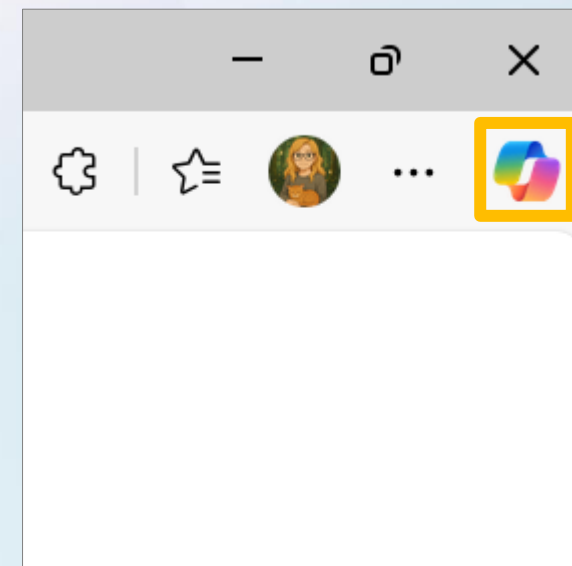

New policy to manage Copilot Chat button visibility in Edge for Business

Starting in August 2025, Microsoft Edge for Business will support a **new policy, *Microsoft365CopilotChatIconEnabled*, that allows administrators to control the visibility of the Microsoft 365 Copilot Chat button in the Edge toolbar.**

This gives organizations more flexibility in managing user access to Copilot features in Edge.

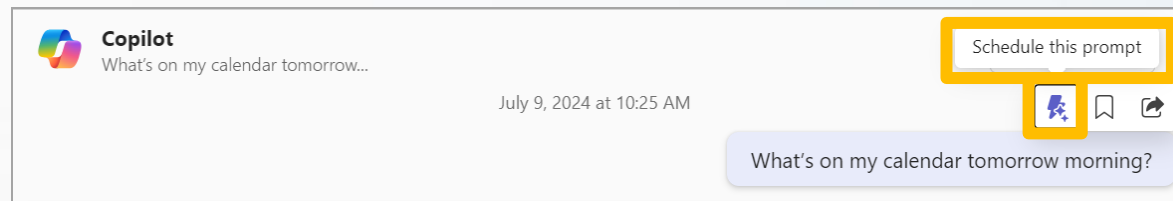

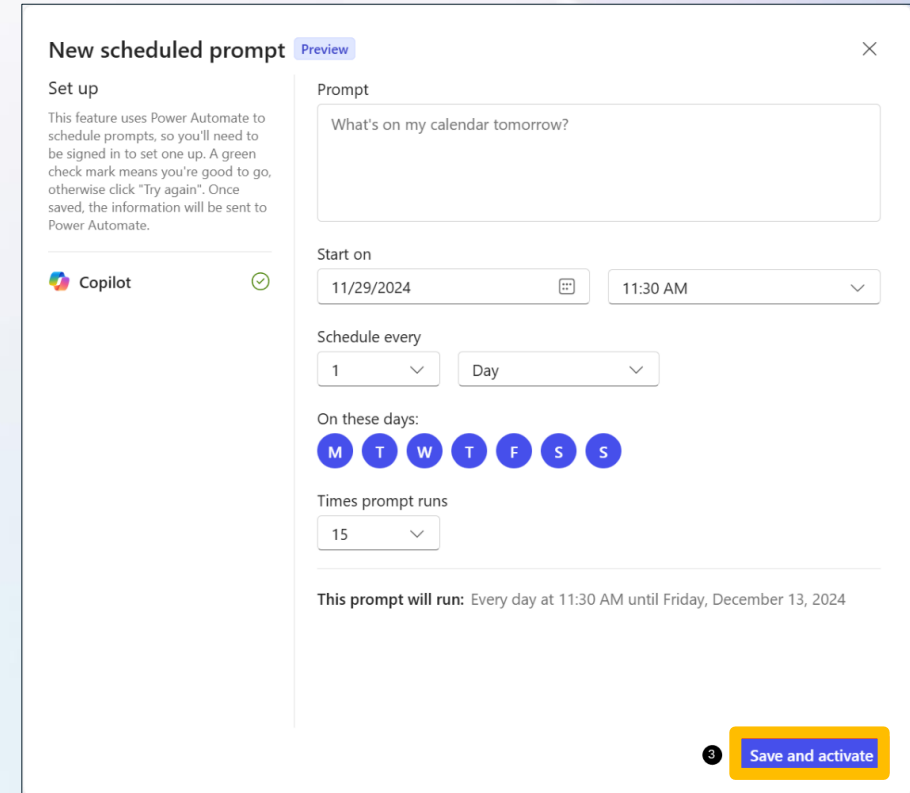

(Updated) Microsoft Copilot for Microsoft 365: Scheduled prompts feature

Microsoft Copilot for Microsoft 365 introduces the **Scheduled prompts feature**, allowing users to **automate prompts**.

- Key updates to this feature include the removal of the Power Automate license requirement and the removal of the need to configure Data Loss Prevention (DLP) settings.

Schedule prompt entry points

Schedule prompt Creation dialog

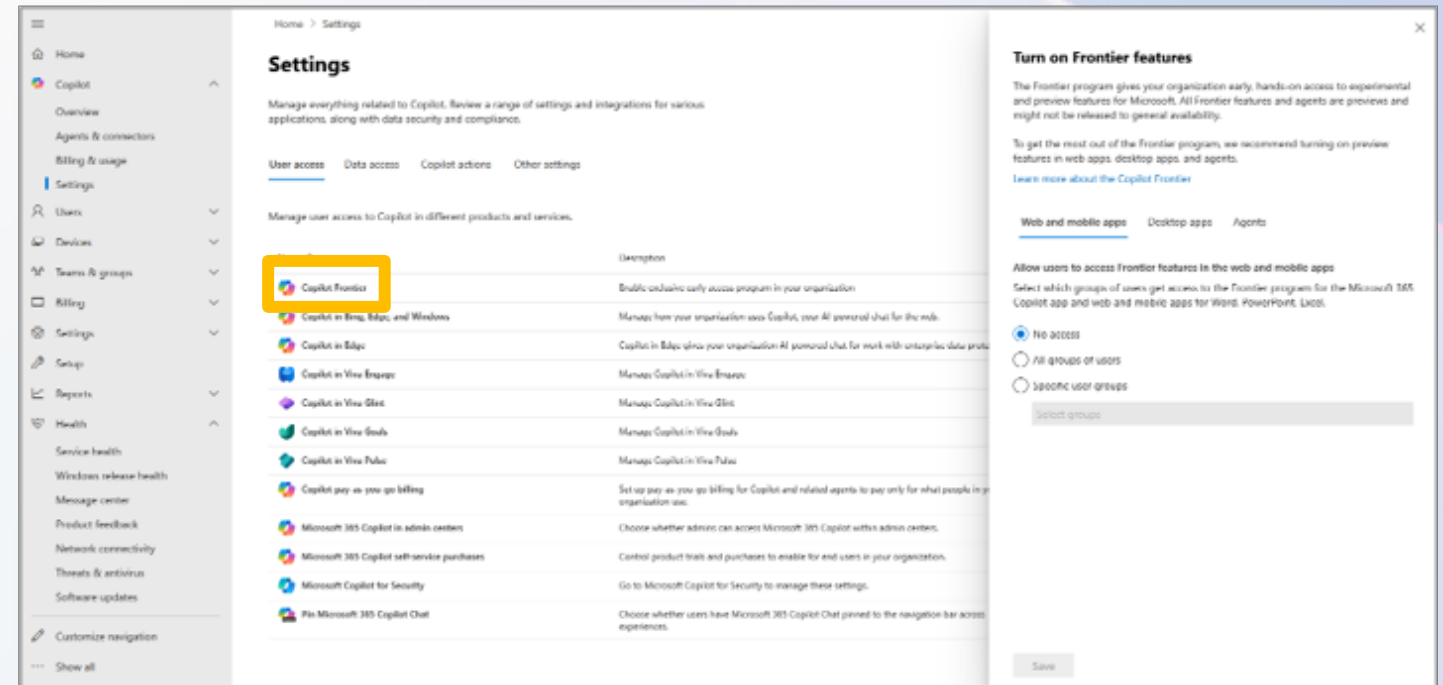

(Updated) Configure end users for Frontier features in Microsoft 365

Frontier features in Microsoft 365 allow admins to **opt-in users for early access to AI features**.

- This lets users experience the latest AI features being released while using their data inside of their home tenant.

Admins should prepare by identifying users, configuring access via Microsoft Entra ID groups, and ensuring users have active Copilot licenses.

Microsoft 365 Admin Center: Extending Copilot Chat to Microsoft 365 apps

Microsoft 365 is introducing **Copilot Chat** as a **side-by-side feature in Word, Excel, PowerPoint, Outlook, and OneNote**, available to users with or without a Copilot license.

If you want users without a Copilot license to access this feature, configure the "Pin" setting in the admin center.

Pin Microsoft 365 Copilot Chat

Copilot Chat is the secure and compliant generative AI chat experience that's already available to people in your organization. Pin Copilot Chat to the navigation bar and Windows taskbar to make it easier for people to find and use it.

[Learn how users can be more productive with the Copilot Chat and agent starter kit](#)

On the navigation bar

Pin Copilot Chat for your users in Teams, Outlook and the Microsoft 365 Copilot app on web, desktop, and mobile. Users with a license for Microsoft 365 Copilot will have it pinned by default. [Learn more about how this setting works](#)

☒ Pin Copilot Chat to the navigation bar (recommended)

☐ Do not pin Copilot Chat to the navigation bar ⓘ

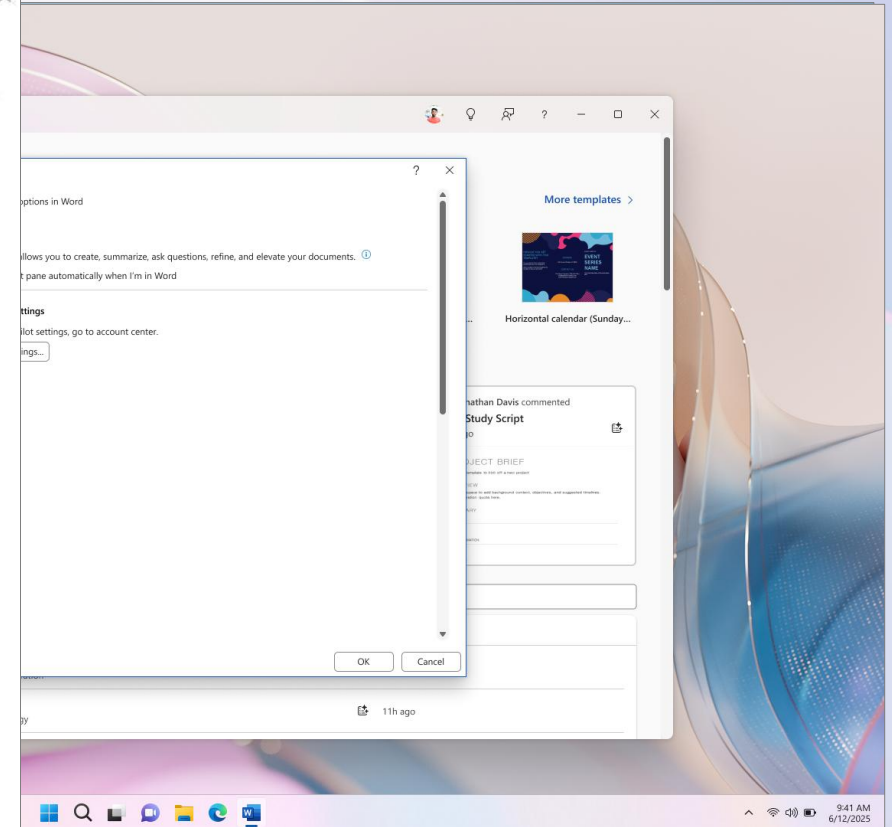

Copilot Chat used with Entra ID is governed by your agreement for Online Services.

On the Windows taskbar

You can pin Copilot Chat, or any app, to the Windows taskbar so that it's easy to find outside of the apps.

[Learn how to manage the Windows taskbar setting](#)

Save

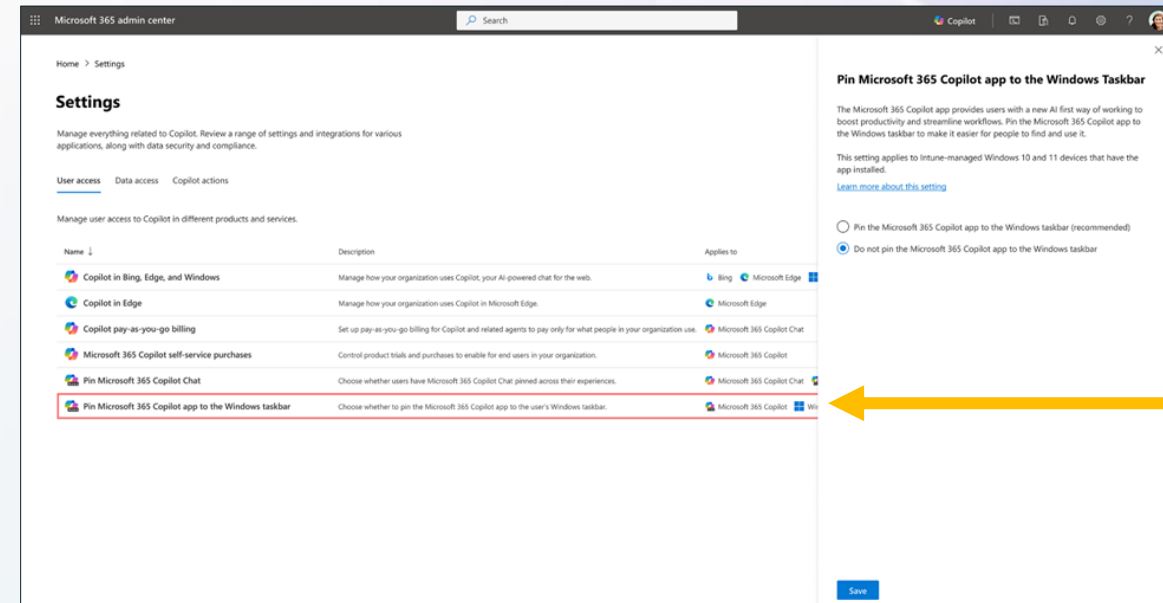

New Copilot setting for pinning the Microsoft 365 Copilot app to the Windows Taskbar

Microsoft 365 is introducing a new setting for admins to **pin the Copilot app to the Windows taskbar on Intune-managed devices** for easier access.

- Pinning this app to the Windows taskbar gives users **easier access to Copilot Chat, Search, Agents, and more**, if these capabilities are already available to them.

Admins should ensure the Microsoft 365 Copilot app is deployed to devices where pinning is desired.

New setting to pin Microsoft 365 Copilot app to the Windows taskbar

User experience

Copilot in the Teams Admin Center available in Public Preview

Microsoft 365 is expanding the availability of **Copilot to include the Teams Admin Center**, enabling admins to manage settings and troubleshoot issues using natural language.

- No action is required, but admins can disable Copilot or exclude specific admins via a security group if needed.
- Copilot will be enabled by default for eligible tenants.

The screenshot shows the 'Manage users' page in the Teams Admin Center. The page includes a 'Users summary' card with 25.3 total users, 512 voice users, and 8 locations. It also shows 'Directory hosting' with 8,106 Skype for Business users and 17,224 cloud hosted users. A 'Users enabled for Microsoft Teams' bar chart shows 8,407 users for Skype for Business and 16,923 for Microsoft Teams. A Copilot overlay is present, showing a search for 'Investigate poor call quality for users' and a list of 5 users with poor call quality. The Copilot interface also includes a 'Navigate to meeting policies for your organisation' button and a 'Meeting bandwidth settings' button.

Manage users

You can manage Audio Conferencing settings, policies, phone numbers, and other features for people in your organization. Go to [Admin center > Users](#) to manage other user settings such as adding or deleting users, changing passwords, and assigning licenses. [Learn more](#)

Microsoft 365 Admin Center: Copilot Pay-as-you-go budget limits

Admins can set **up budget limits for Copilot Pay-as-you-go** by defining billing policies scoped to departments or groups.

- These policies can be assigned to specific Copilot services, such as M365 Copilot Chat or SharePoint-based agents, and configured with budget thresholds and alerting rules.
- Email notification alerts (soft alerts) are supported, enabling proactive cost control.

Set up a budget

1. Sign in to the [Microsoft 365 admin center](#).
2. Go to **Copilot > Billing & usage**.
3. On the **Billing policies** tab, select the policy you want to manage.
4. On the policy panel, select the **Budget** tab.

For reference only: The Budget tab will be available once the feature is rolled out

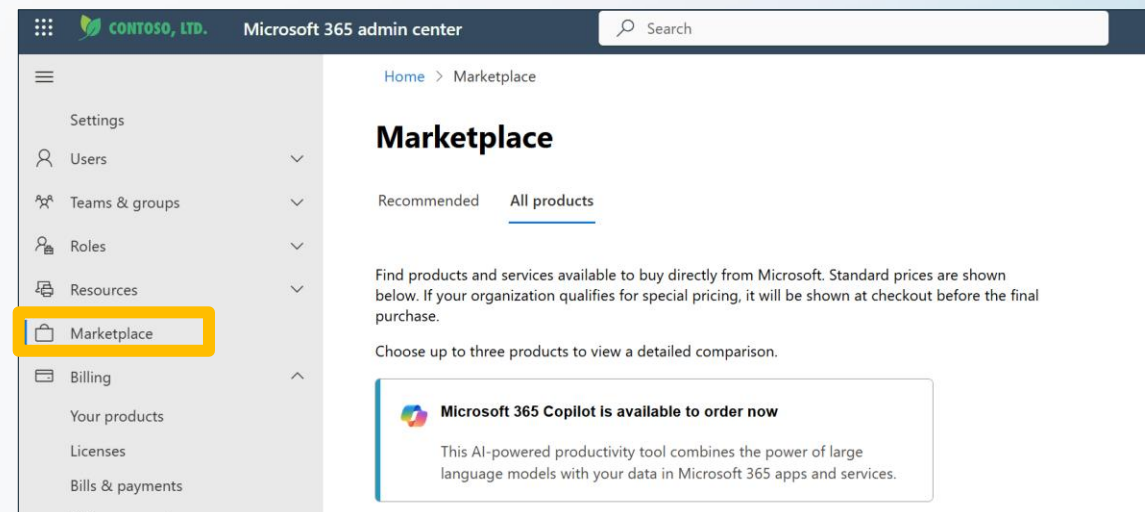

Microsoft 365 Admin Center: Pre-purchase capacity packs for Microsoft 365 Copilot Chat and SharePoint Agents

This feature integrates pre-purchased capacity packs into Microsoft 365 Admin Center for Copilot experiences.

- Administrators can apply pre-purchased message capacity to Microsoft 365 Copilot Chat, SharePoint Agents, and other compatible scenarios before incurring pay-as-you-go charges.
- Capacity packs, available as monthly or yearly subscriptions in the M365 Admin Center marketplace, provide a fixed number of prepaid messages, simplifying administration by eliminating the need to set up pay-as-you-go multiple times.

For reference only: Marketplace in the M365 Admin Center

Microsoft 365 Copilot: Visual Creator Agent will be retired and no longer available

Starting in mid-July, **the Visual Creator agent will no longer be preinstalled** in Copilot Chat, but users can still access it from the Agent Store if allowed by tenant policy and generate images directly in Copilot Chat.

In late July 2025, **the full removal of the Visual Creator agent from the Agent Store will be completed**, the Visual Creator agent within Microsoft 365 Copilot will be discontinued, and users will be advised to transition to the new Create module for generating content.

M365 Copilot Connectors: Expanded indexing support for connectors

We're introducing enhanced indexing capabilities for M365 Copilot connectors (formerly Graph connectors). This update enables indexing of comments and attachments, improving the quality and relevance of M365 Copilot responses and Microsoft Search results.

This enhancement applies to the following connectors:

- Azure DevOps Work Items
- Confluence Cloud
- Confluence On-Prem
- ServiceNow Knowledge

M365 Copilot Connectors: Support for Webhooks for improved content freshness

We're introducing **Webhooks for Content Freshness in the Azure DevOps Work Items Copilot connector** (formerly Graph connector).

- This new capability enables **near real-time indexing of content updates**, ensuring your users receive the most relevant and up-to-date Copilot answers and search results.

The screenshot shows the Microsoft 365 admin center interface. On the left, the 'Search & intelligence' section is active, displaying a list of connections. The main area shows the 'Azure DevOps Work Items' connector setup wizard. The steps are: 1. Give a name that will be displayed to users in results (Display name: AzureDevOps). 2. Provide basic information about your ADO instance (Azure DevOps organization: Example: fabrikam). 3. Authenticate your AzureDevOps instance (Authentication type: Select a method). 4. Rollout to limited audience (toggle: off). A 'Notice' section at the bottom states: 'By enabling this connection, you authorize Microsoft to create an index of third-party data in your Microsoft 365 tenant subject to your configurations. All data that is indexed by this connection is your Customer Data. Learn more in the Product Terms and Microsoft Privacy Statement. The length of the crawl frequency that you set may impact your data controller's compliance responsibilities, please follow this link to learn more.' On the right, a sidebar titled 'Power your Copilot with Azure DevOps' provides additional context and requirements.

Microsoft 365 Admin Center: Agent usage report

A new agents usage report will be available in the Microsoft 365 Admin Center:

- The report will be scoped to **include agents in M365 Copilot and Copilot Chat with usage by both M365 Copilot licensed and unlicensed users.**
- The report will include total active agent users, total active agents, active user segmentation by licensed and unlicensed users, and active users and active agent segmentation by publisher type (i.e. user-created agents, agents built by your org, agents built by Microsoft, agents built by Microsoft partners).
- The report will also include usage details per user, agent, and user-agent pair.

Index data from third-party systems into Microsoft 365 with Copilot connectors for people data

Microsoft 365 Copilot Connectors for People Data (formerly known as Microsoft Graph Connectors) enable organizations to seamlessly integrate people-related information from third-party systems into Microsoft 365.

Copilot in Planner (Preview) will no longer be included in Planner and Project Plan 3 and Plan 5

Effective early August 2025, **Copilot in Planner (Preview) will no longer be included in the following plans:**

- **Planner and Project Plan 3**
- **Planner and Project Plan 5**

Users licensed only with Planner and Project Plan 3 or Plan 5 will lose access to Copilot in Planner (Preview) after this date.

- Access will continue for users with a Microsoft 365 Copilot license.

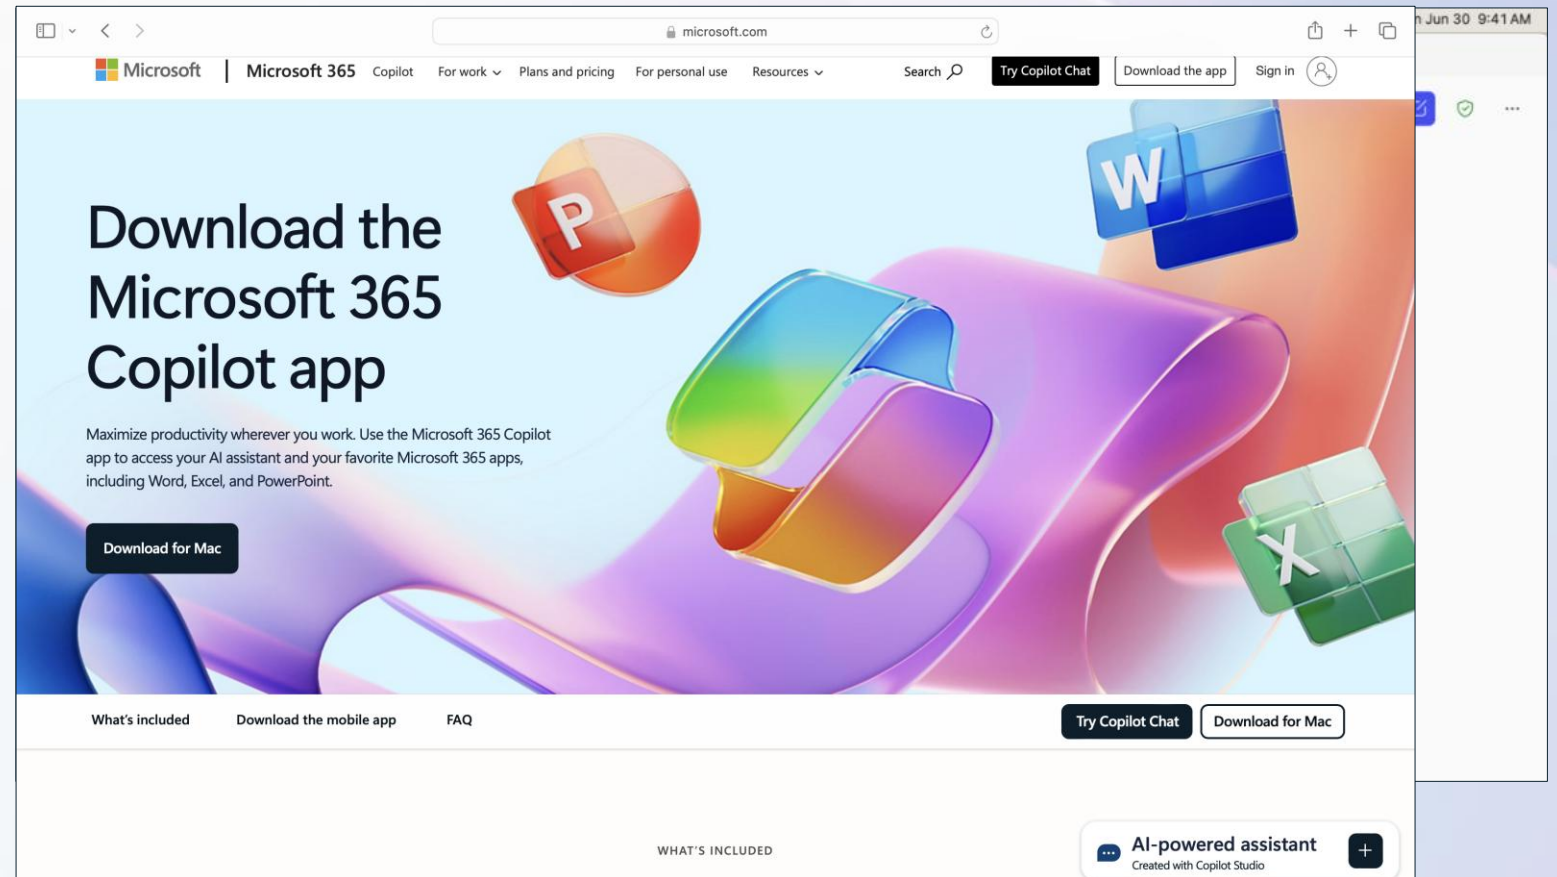

Microsoft 365 Copilot app for Mac

The Microsoft 365 Copilot app is now available for MacOS, offering AI-powered tools and features directly from the Mac Dock.

- Users must manually download the Microsoft 365 Copilot app for Mac.
- This app does not replace the Microsoft 365 Copilot web app (<https://m365.cloud.microsoft/>), which users can still access via their web browser.

M365 Copilot App: Ask Microsoft 365 Copilot

Users will be able to send their content like text and images present on their Windows screen to Copilot Chat for a seamless interaction with Copilot.

- Right-click on your content to **ask Copilot about it on Copilot PC devices**.

The screenshot shows a web browser window displaying a document titled "Network Observability" (Page 17 of 22). The document contains a diagram titled "Figure 11: Concept of locker-box" which illustrates the flow of data between Network Participants, a Registry, a Locker-box, and a Locker-box vault. The diagram includes steps for lock acquisition, verification, and data storage. Below the diagram, there is a section titled "Considering the limitations of data sharing to develop 'Locker-box', ONDC network has the following approach:" followed by a list of bullet points.

Overlaid on the right side of the browser window is a Copilot chat window. The chat window shows a message from the user: "Analyzing the image: Faces may be blurred to protect privacy. Here's a simplified version of the flowchart in your image, breaking down the lock acquisition and release process into clearer steps:". Below this message is a section titled "Simplified Lock Process Overview" with a sub-heading "1. Initiation by Participants". The chat window also includes a "Message Copilot" input field and a "Provide a document summary of the simplified lock process" button.

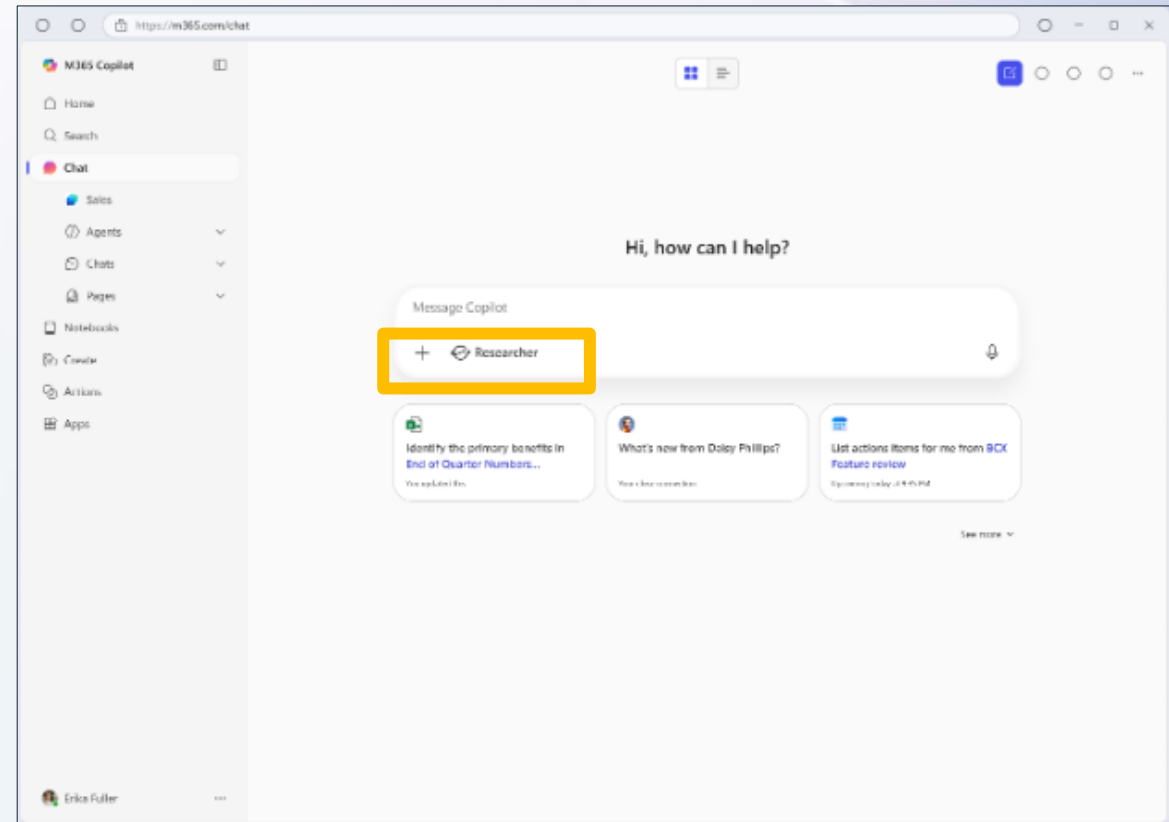

Researcher on M365 Copilot Prompt Box

The Microsoft 365 Copilot Prompt Box now features the Researcher agent to enhance research tasks using OpenAI's models.

- The Researcher agent, previously accessible only via the *Left Nav* as a standalone experience, will now also appear as a button in the M365 Copilot Prompt Box across Microsoft 365 apps, including Teams Outlook, and the Copilot Chat experience.
- No admin action is needed, but availability can be managed via the Microsoft 365 Admin Center.

Copilot Chat now offers better search refinement on CIQ menu File tab

Users can **now refine file searches with new File Type Filters** and **People Refiners** in the Files tab of the CIQ menu, enhancing search efficiency and productivity.

You may consider notifying your users about this update to help them take advantage of the new filters.

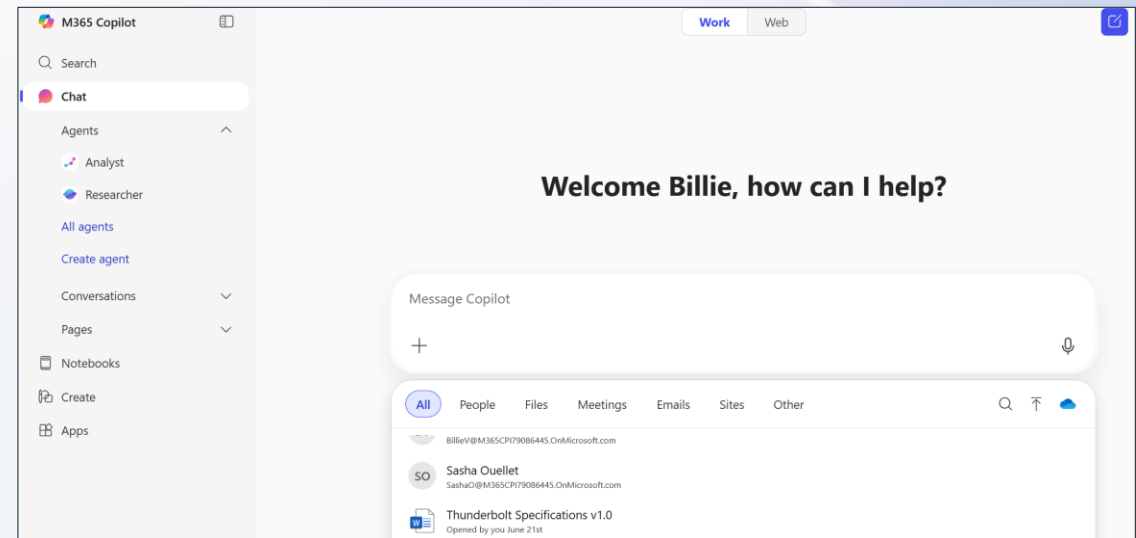

Microsoft 365 Copilot: Viva Engage discussion posts added to grounding sources

Microsoft 365 Copilot now includes Viva Engage public community and Storyline discussion posts as grounding sources for more contextually relevant responses.

- Only content from public communities and Storylines is included—***private or restricted content is not used.***
- This feature is on by default and is enabled automatically for tenants with both Viva Engage and Microsoft 365 Copilot.

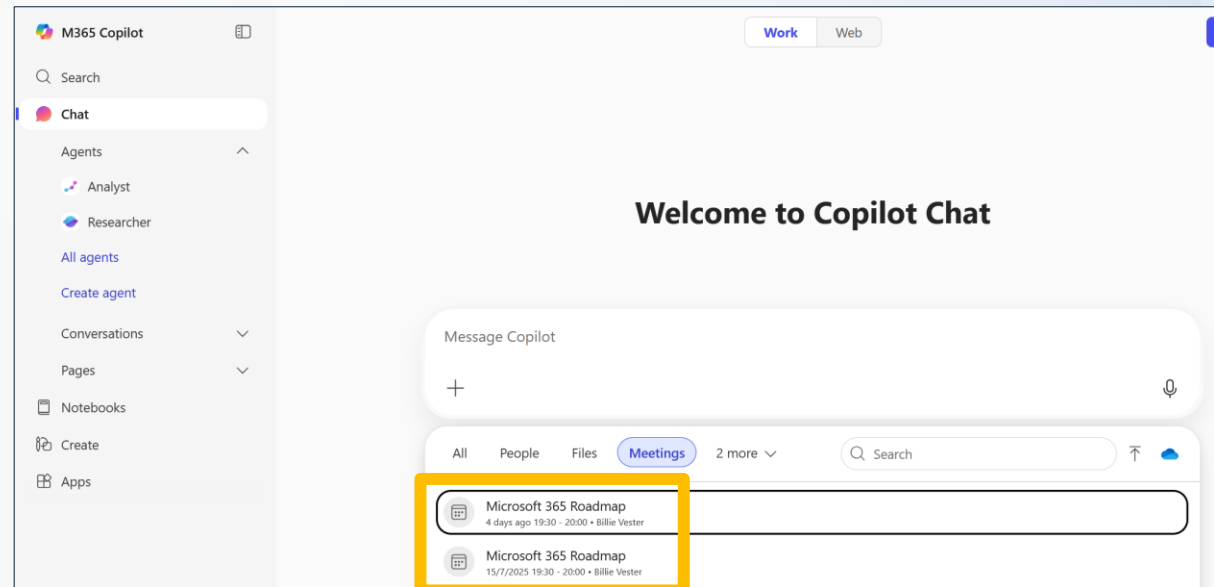

For reference only: Current grounding options in Microsoft 365 Copilot

Copilot Chat now offers meeting series selection on CIQ menu

Enhanced Copilot Chat now **allows users to include both individual meetings and entire meeting series in prompts**, improving context and relevance.

Example of a meeting series in a prompt

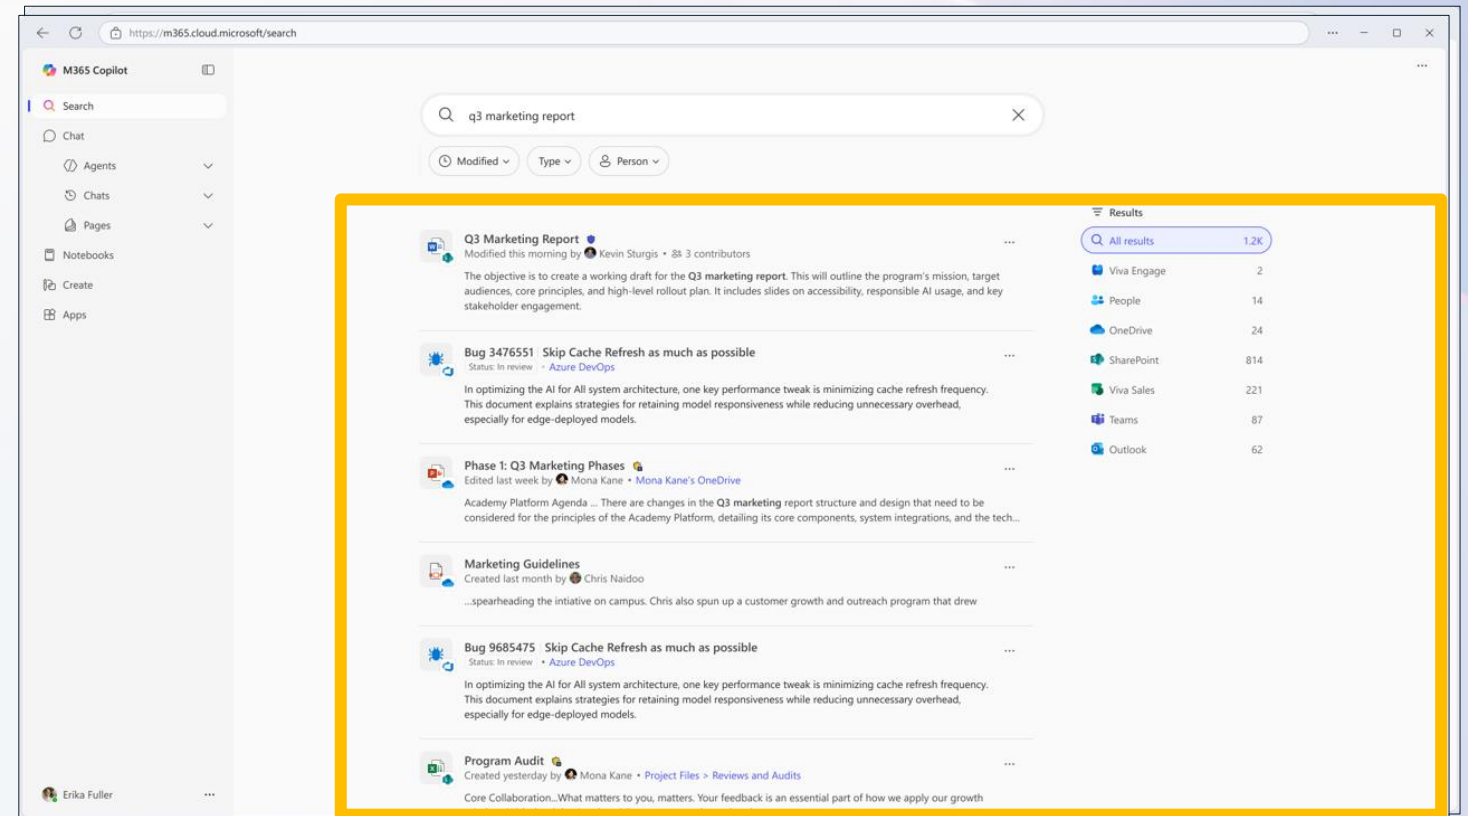

Microsoft 365 Copilot Search

Microsoft 365 Copilot Search, an AI-powered search interface integrated with Copilot chat, is being introduced for users with eligible Microsoft 365 Copilot licenses, enhancing personalized search and task execution across platforms.

Ensure eligible users are appropriately licensed to access this new experience.

Copilot Chat now supports new file types in search grounding

Microsoft 365 Copilot Chat is expanding its file type support to include CAD, ZIP, and MP4, enhancing its ability to retrieve and reason over a wider variety of files.

- No action is required, but users must have a Microsoft 365 Copilot Chat license to utilize this feature.

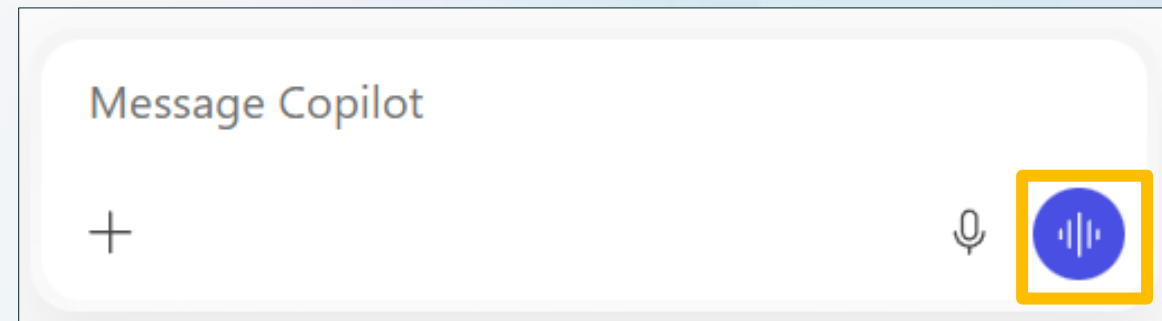

Realtime voice in M365 Copilot Chat and M365 Copilot

Microsoft 365 Copilot introduces voice chat, allowing hands-free interaction for brainstorming and quick searches.

- Users will notice a new voice chat icon in the input box, and no admin action is required.

Voice input icon in Copilot Chat on iOS / Android

Voice input options in Copilot Chat on Windows / Mac / Web

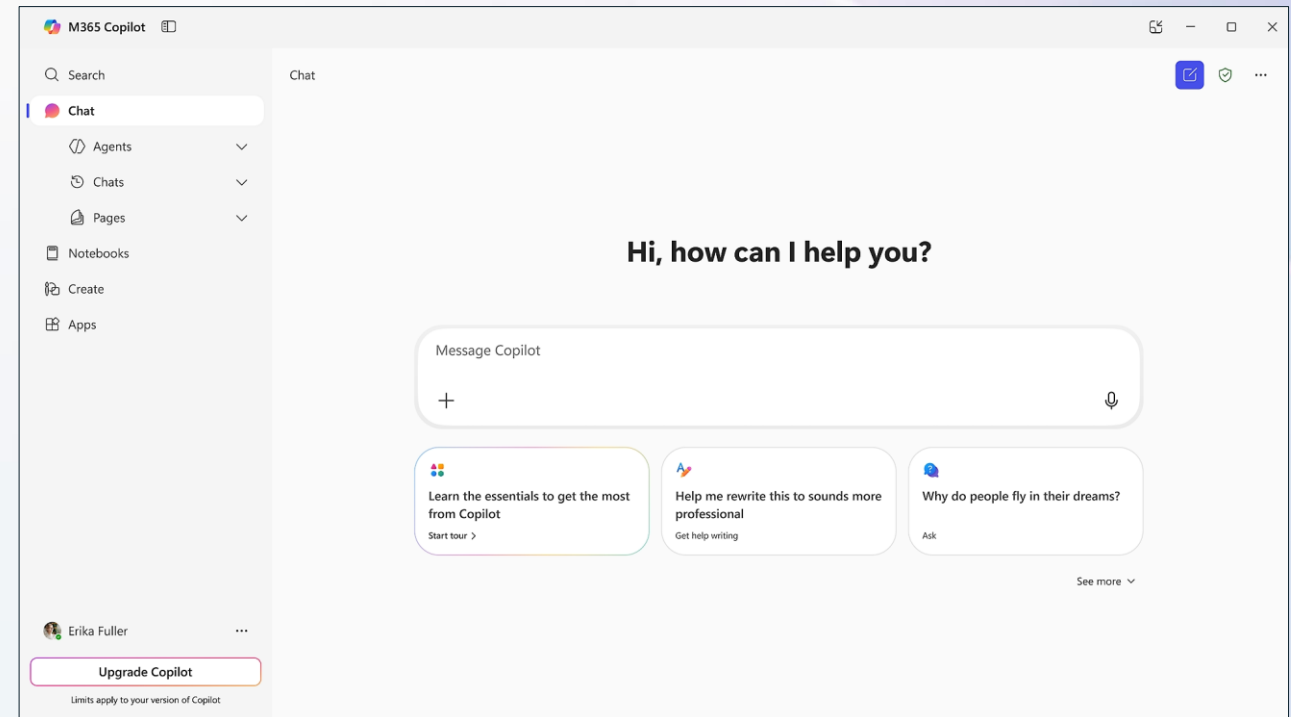

Microsoft 365 Copilot Chat for EDU customers ages 13 and older

Microsoft 365 Copilot Chat **is available at no additional cost for Microsoft 365 EDU users ages 13 and older** who sign in with their Microsoft Entra account (no Microsoft 365 Copilot license required).

- Microsoft 365 Copilot Chat offers enterprise data protection (EDP), and secure AI chat, powered by the latest large language models with optional web grounding. Admins must take action to enable access.

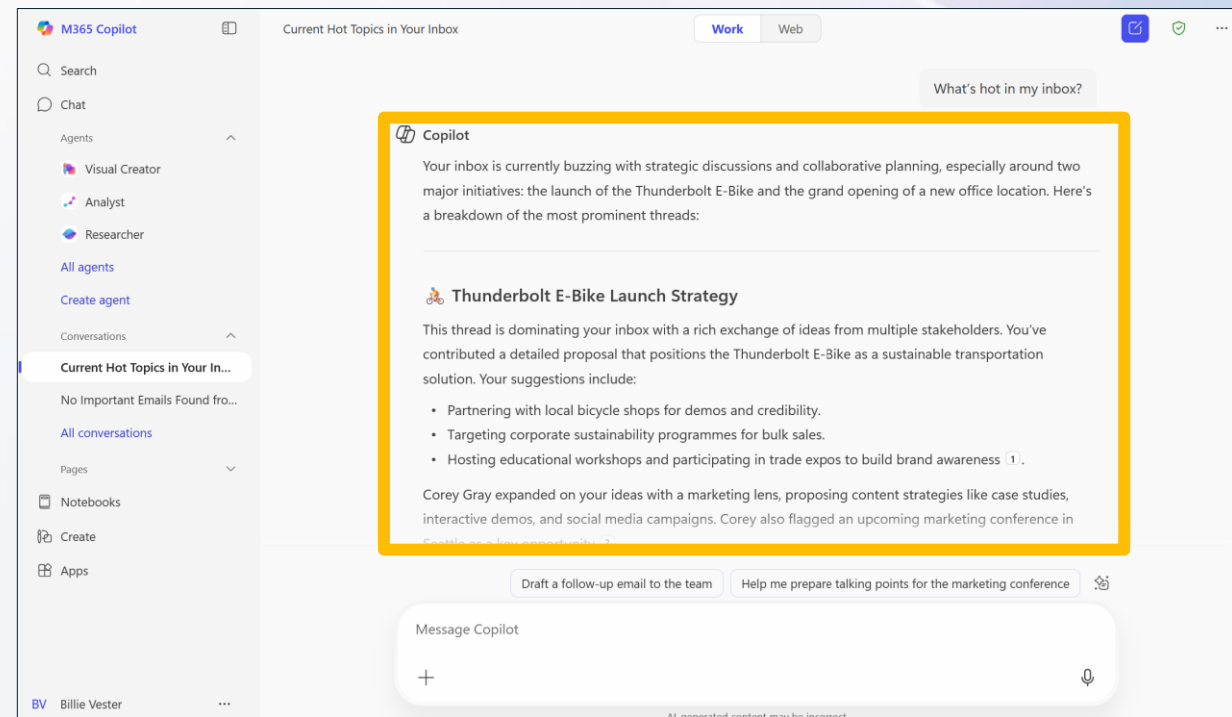

Microsoft Copilot: Catch up on important emails in Copilot Chat

Copilot Chat helps you stay on top of your inbox by highlighting important and actionable emails.

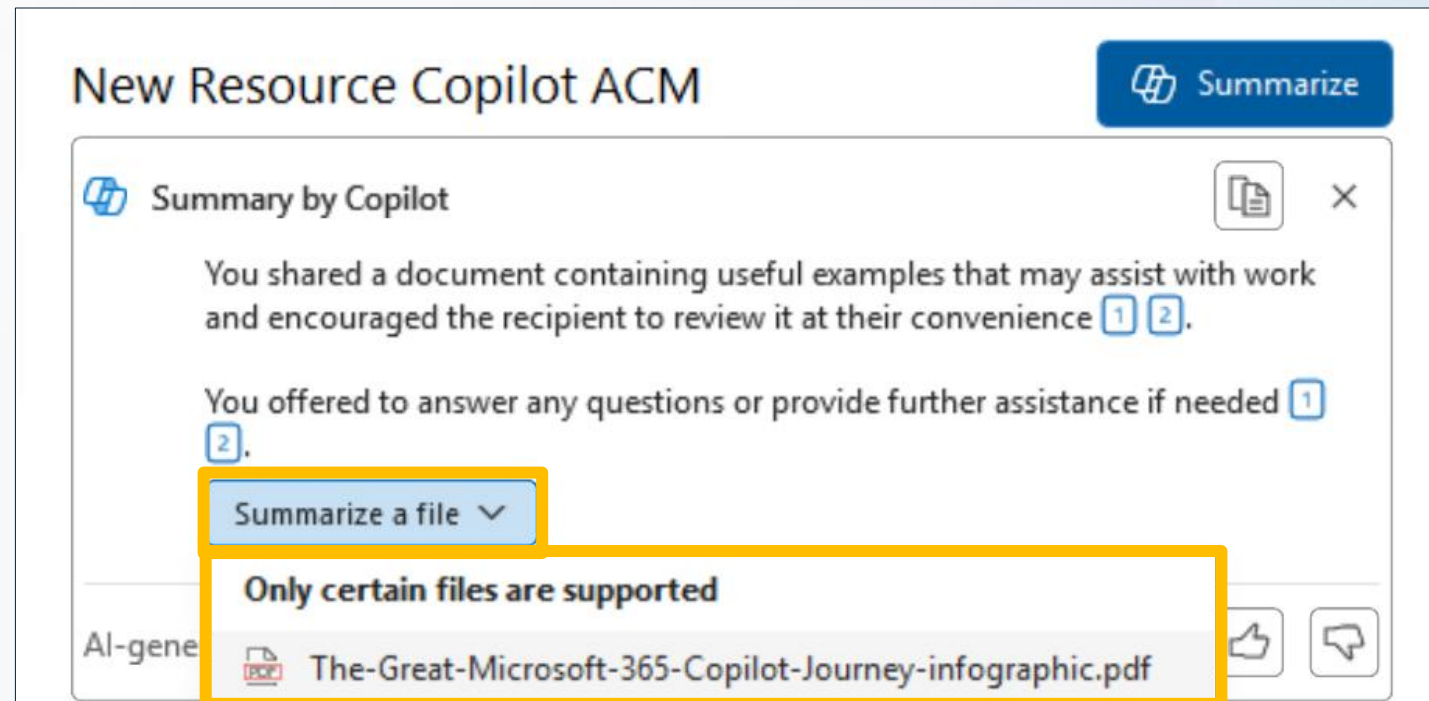

- These include messages from your manager, leadership, top collaborators, or emails with tasks, when using prompts like *"What's hot in my inbox?"* or *"What were the important emails from last week?"*

Copilot in classic Outlook: Summarize email attachments with Copilot in classic Outlook for Windows

Microsoft is enhancing Copilot in **classic Outlook for Windows to summarize email body content and attachments** like PDF, Word, and PowerPoint directly in the reading pane.

Copilot in Word: Content suggestions in Word

Select the **Suggestions tab** within the Copilot summary at the top of a Word document for **suggestions on improving the content of the document**.

Summary Insights Discussion Activity **Suggestions** Audio overview ⓘ Stop ^

This newsletter draft has a clear structure and provides a solid foundation for organizing content, but it currently relies heavily on placeholder text and repeated generic descriptions. To create a more engaging and informative newsletter, consider replacing the placeholders with original, topic-specific content and reducing redundancy.

✓ **Replace Placeholder and Repetitive Content with Original Material:** Many sections use placeholder text or repeat the same generic explanation about newsletters, which can make the publication feel unfinished and unengaging. To improve, substitute these sections with unique, relevant information tailored to each topic or article, providing value to your readers. 1 2

Example: Instead of "Add description text here to get your subscribers interested in your topic," write a brief summary of the featured property or trend, such as "Discover how urban lofts are reshaping city living in our exclusive feature this month."

> **Clarify and Differentiate Section Topics:** The newsletter includes multiple sections with similar headings and repeated content, which may confuse readers or reduce their interest. Distinguish each section by providing specific, topic-focused introductions and content that clearly relates to the section heading. 3 4

AI-generated content may be incorrect

Copilot in Word: Recent activity is part of Copilot's dynamic document snapshot in Word

Select the **Activity** tab within the Copilot summary at the top of a document for a **summary** of recent comments and changes.

- Choose a time window of 3 days, 1 week, or 2 weeks.

The screenshot shows the Microsoft Word Copilot interface. At the top, there are tabs: Summary, Insights, Discussion, **Activity** (highlighted with a yellow box), and Suggestions. To the right of the tabs are icons for Audio overview, information, and a close button. Below the tabs, the 'Activity since creation' section is visible. It contains a table with the following data:

Created by	All contributors	Last edited	Views
Anna Yesterday at 5:03 PM		Billie Vester 6 min ago	Unique viewers: 2 Total views: 12

Below the table, there are sections for 'Comments since last visit' and 'Updates since last visit', both stating 'You're all caught up—no comments to read from your last visit on Jul 27, 2025, 12:29 PM' and 'You're all caught up—no updates from your last visit on Jul 27, 2025, 12:29 PM' respectively. At the bottom left, a dropdown menu is open, showing options: 'Since last visit' (selected), 'Past 3 days', 'Past week', 'Past 2 weeks', and 'Since last visit' (checked). A yellow box highlights this dropdown menu. At the bottom right, there is a warning: 'AI-generated content may be incorrect' with thumbs up and down icons. The document title 'MODERN LIVING' is visible at the bottom.

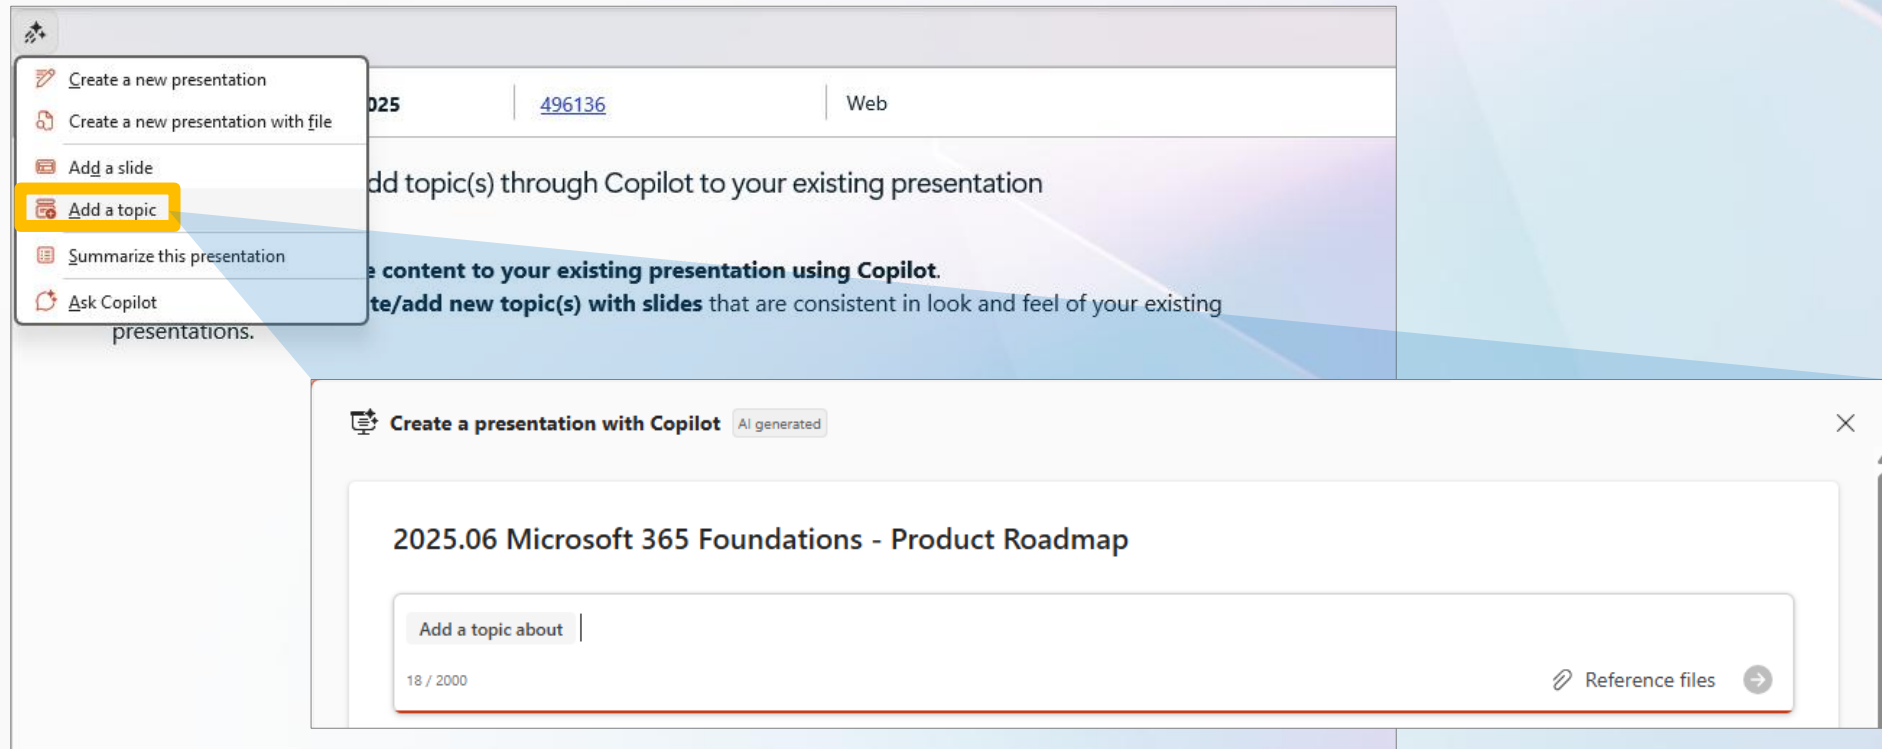

Copilot in PowerPoint: Add topic(s) through Copilot to your existing presentation

You will be able to **add more content to your existing presentation using Copilot.**

This will help users **generate/add new topic(s) with slides** that are consistent in look and feel of their existing presentations.

Microsoft 365 Copilot Chat entry point in Microsoft Edge for Business

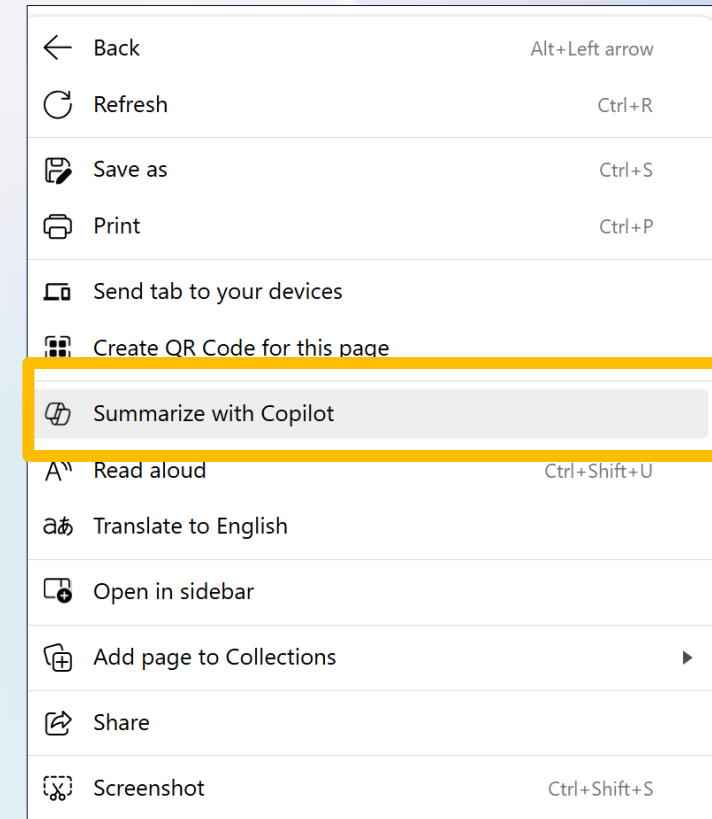

Microsoft 365 introduces two new Copilot access points in Edge for Business:

- A Copilot Chat **summarization option** in the right-click context menu
- Integration with **Find on Page (Ctrl+F)** to enhance in-browser productivity

These features are on by default.

However, if your organization restricts Copilot from accessing page content via Data Loss Prevention (DLP), Copilot will not process the page content.

If Copilot is disabled in your tenant, these features will not function as intended.

For reference only: Right-click menu in Microsoft Edge showing the new "Summarize with Copilot" option

Researcher in Copilot Notebooks

The Researcher Agent is being integrated into Copilot Notebooks, allowing users to perform complex research across enterprise data sources using OpenAI's model.

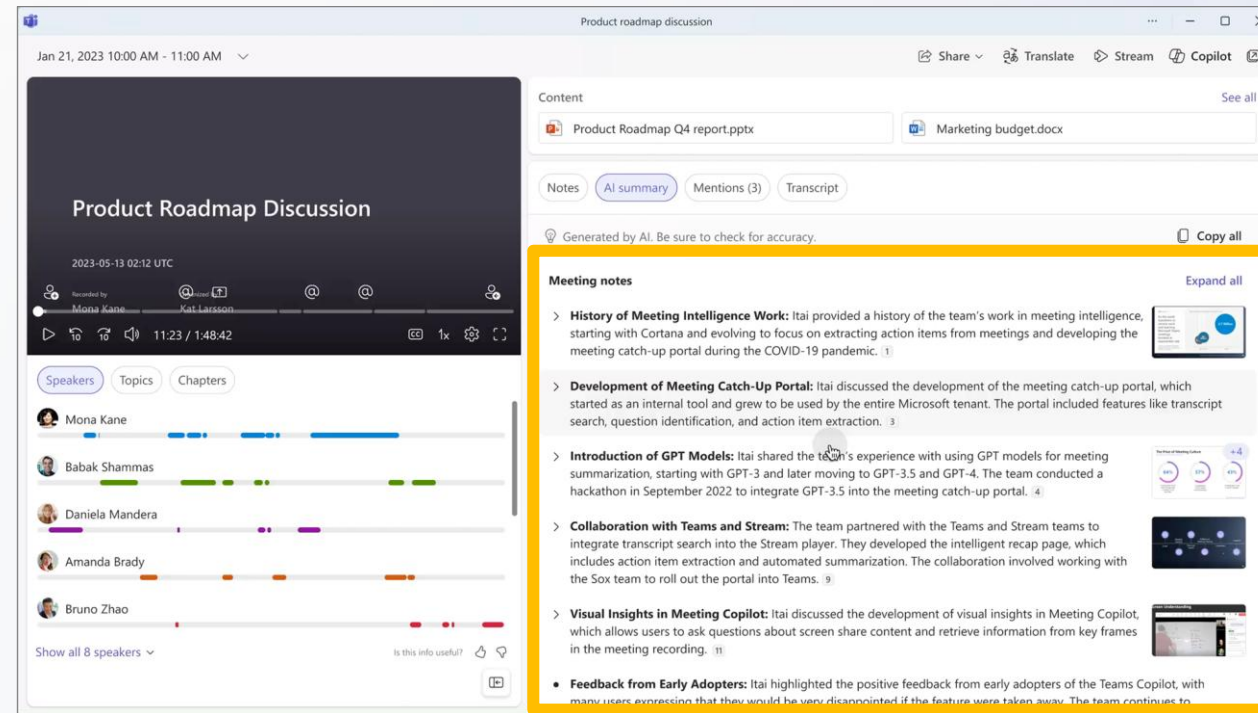

- No specific action is required, but users relying on research-intensive workflows may benefit from the enhanced experience.
- This feature will be on by default for tenants with access to both Copilot Notebooks and the Researcher Agent.

Microsoft Copilot in Teams: Visual Insight for intelligent recap

Microsoft Copilot in Teams will soon include shared-screen content in its intelligent meeting recaps, providing more comprehensive summaries.

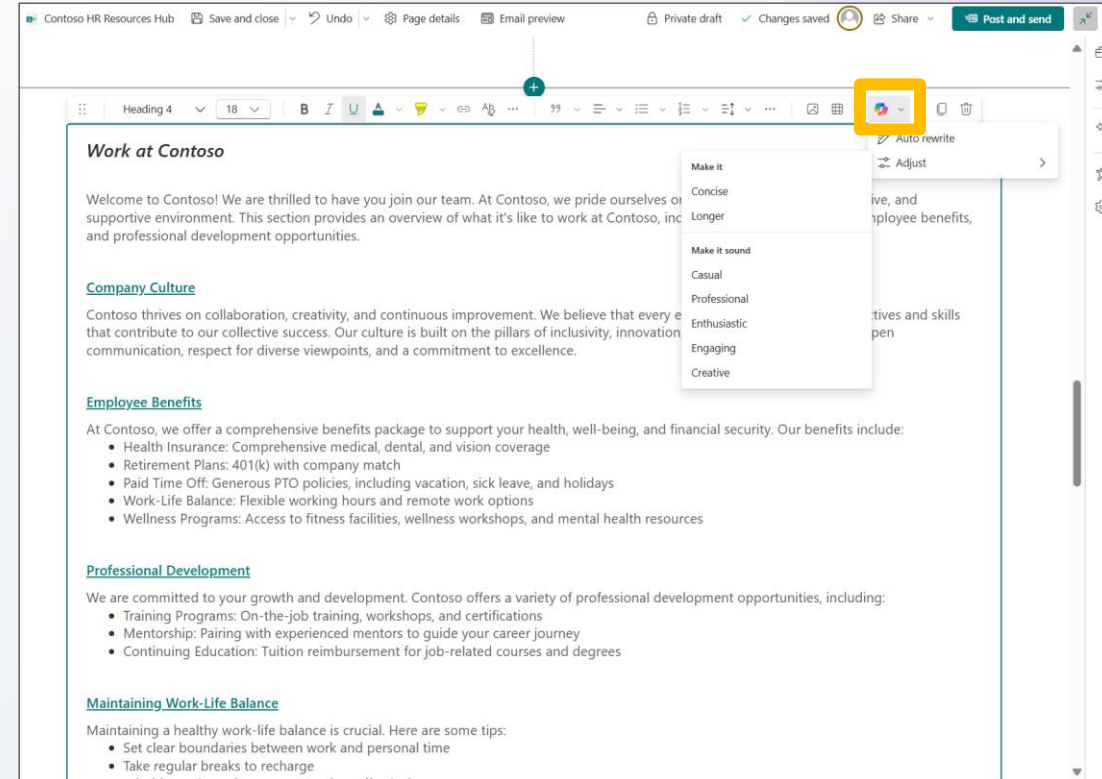

Copilot in SharePoint: Text editor Copilot 'Refine' update

SharePoint is updating the capabilities of its text editor Copilot. Now, you can not only use copilot to rewrite your existing text but also use it to keep writing or add a grounding document.

- By answering the question *"what do you want copilot to change"*, you can perform any number of refinements to your existing content.

For reference only: Text editor options available today

Expanded Copilot in Viva Engage updates

Microsoft 365 is enhancing Copilot in Engage to become a personalized AI companion, offering new features like Community Catch-Up, Information Discovery, and Recall for licensed users.

- Ensure users needing these features have a Microsoft 365 Copilot license to access the updates.

Copilot capabilities in Viva Engage

	M365 Copilot license	M365 Copilot + C&C/Viva Suite license	C&C/Viva Suite license
Enhanced Copilot experience in Engage Contextual copilot experience helps users with their productivity by helping them catch up, search and re-find content along with improved writing assistance when creating new posts. Note: These features are built on the Avalon/M365 Copilot platform and leverage Microsoft Graph data for a deeply integrated experience.	✓	✓	
Engage Copilot v1 Writing assistance when creating new posts.			✓

Enhanced Copilot in Engage

Proactive, Personalized, Contextual and expanded across all of Engage

Proactive catch-up cards to deliver value in the user's workflows

Explore new updates across Engage from Henry Brill and others

Contextual pre-populated prompts

Hero scenarios: Catch up, search, refine

Expanded entry point available across Engage

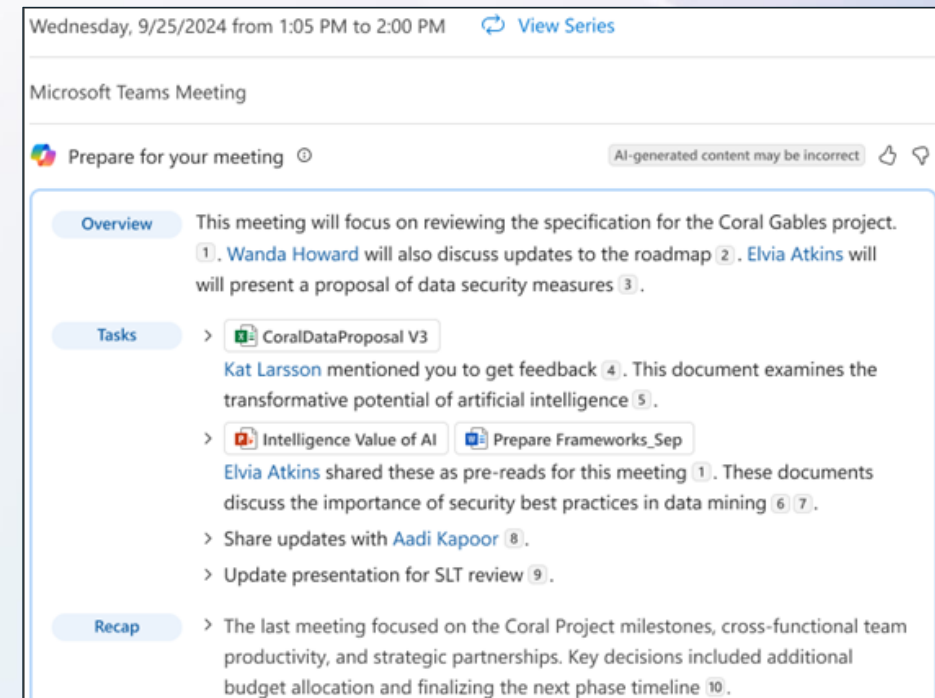

These features are built on the Avalon/M365 Copilot platform and leverage Microsoft Graph data for a deeply integrated experience

Copilot in Outlook: Copilot Prepare for calendar meetings (GCC)

When you have an upcoming meeting, Copilot proactively shows you a "Prepare" button in your inbox which helps you quickly get context by creating a summary of the meeting and showing and summarizing relevant files, leveraging the power of the Microsoft Graph.

- Now you have all the most important details you need and can arrive prepared and ready to engage in a productive conversation.
- This feature will be available in the new Outlook for Windows and web.

Examples of information Copilot can provide include summaries of meeting-related emails, your specific actionable tasks, and a recap of the previous meeting

Microsoft Purview compliance portal: Restrict Microsoft 365 Copilot processing on content with sensitivity labels for GCC and DoD

Microsoft Purview Data Loss Prevention is extended to Microsoft 365 Copilot.

- This feature will allow DLP policies to provide detection of sensitivity labels in enterprise grounding data and restrict access of the content in Microsoft 365 Copilot.

The screenshot shows the 'Create policy' wizard in the Microsoft Purview portal. The 'Locations' step is highlighted in the left-hand navigation pane. The main area is titled 'Choose where to apply the policy' and includes two informational notes. Below the notes is a table with columns for 'Location', 'Scope', and 'Actions'. The 'Microsoft 365 Copilot' location is selected with a checkmark and is highlighted by a yellow box. At the bottom, there are 'Back', 'Next', and 'Cancel' buttons.

Location	Scope	Actions
Exchange email	Turn on location to scope	
SharePoint sites	Turn on location to scope	
☒ Microsoft 365 Copilot	All users & groups	Edit

The DLP policy will allow the selection of Microsoft 365 Copilot as a location

Microsoft 365 Copilot Chat coming to GCC environments

Microsoft 365 Copilot Chat (“Copilot Chat”) will be available by default at no additional cost for Entra account users with an eligible Microsoft 365 subscription:

- Microsoft 365 F1, F3, G3, or G5
- Office 365 F1, F3, G3, or G5

Copilot Chat will be available by default from the web. It will also be available and pinned by default in the Microsoft 365 Copilot app (web, desktop), Teams (web, desktop), and Outlook (web, desktop). If Copilot Chat availability for any of these entry points changes, we will inform you.

Web grounding in Copilot Chat will be off by default unless you have explicitly allowed for web grounding using the “Allow web search in Copilot” policy.

Microsoft 365 Copilot Chat coming to DoD environments

Microsoft 365 Copilot Chat Copilot is available at no additional cost for Microsoft 365 DOD users who sign in with their Microsoft Entra account (no Microsoft 365 Copilot license required).

- Microsoft 365 Copilot Chat offers enterprise data protection (EDP), and secure AI chat designed for work, powered by the latest large language models with optional web grounding.
- The general availability of this release will be delivered to the users with web grounding OFF by default to meet US Government requirements.
- This will help protect sensitive information which should not leave the DOD compliance boundary.

(Updated) Intelligent recap access for multi-tenant organizations in GCC

Copilot users in a B2B multi-tenant setup can now view intelligent meeting recaps post-meeting from the resource tenant where it was hosted.

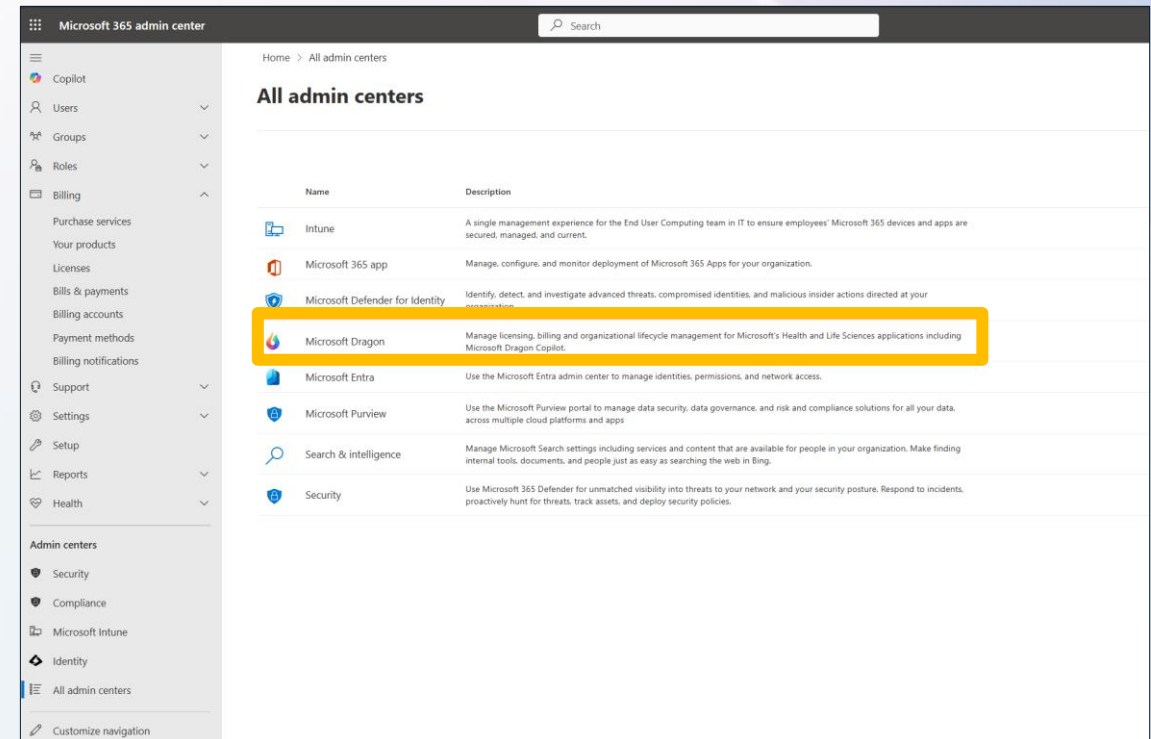

Dragon Copilot launched for US and Canada partners

Microsoft Dragon Copilot is the first AI assistant for clinical workflows.

It brings together the trusted natural language voice dictation capabilities of **Dragon Medical One (DMO)** with the ambient listening capabilities of **DAX Copilot (DAX)**.

- Dragon Copilot generates draft clinical output from recordings, for a clinician's review, which can significantly enhance efficiency and accuracy in healthcare settings.

Microsoft Viva Insights Copilot Analytics: Unified experience for Copilot Dashboard and Insights analyst workbench	485734	Microsoft Viva Insights will integrate Copilot Analytics into a unified experience through the Viva Insights web app, enhancing capabilities for users and analysts.	June 2025
Microsoft 365 Copilot Interaction Export API	491631	The new Microsoft 365 Copilot Interaction Export API enable customers and ISVs to export Copilot interaction data for processing in their security and compliance (S+C) applications. This new Interaction Export API captures the user prompts and Copilot responses in the Copilot private interactions and provide insights into the resources Copilot has accessed to generate the response.	June 2025
Copilot Prepare for Meeting in Calendar	495461	With so many of us in back-to-back meetings, it can be a real struggle to stay on top of pre-reads, action items, and even what each meeting is about. Copilot can identify and summarize the key points so you can show up prepared in just a few minutes.	June 2025
Custom Dictionary	487428	Tenant administrators can now upload a Custom Dictionary through the M365 Admin Portal's Copilot Settings page to include tenant-specific terminologies. This enhancement improves entity recognition in Teams meeting transcripts, benefiting both Recap and Copilot's understanding of the content.	July 2025
(Updated) Microsoft 365 Admin Center: Onboard SharePoint agents as a Pay-as-you-go scenario	MC1075905	Microsoft 365 introduced pay-as-you-go departmental billing for SharePoint Agents in Copilot, enabling precise cost management.	July 2025

Copilot Search management and insights	495460	Enable AI administrators to configure, customize, and measure Copilot Search across their organization. This feature provides centralized tools to manage search connectors, tailor search experiences to organizational needs, and gain actionable insights into adoption, usage patterns, and content engagement.	June 2025
Copilot surfaces important emails in new priority view	495261	Copilot makes it easy to identify high-priority emails and emails that need a reply, by offering a priority view directly within your Outlook inbox.	June 2025
Microsoft Copilot Dashboard in Viva Insights: New prompt categories	486698	Prompt categories Ask and find/ Catch up/ Draft and brainstorm for key Copilot use cases will be available in the Microsoft Copilot Dashboard in Microsoft Viva Insights.	June 2025
Copilot Agents in M365 Copilot App: Agent Store will be available in Microsoft 365 Copilot App for iOS and Android	482545	Microsoft 365 Copilot is expanding its mobile experience with an agent store.	June 2025
Summarize email attachments with Copilot in classic Outlook for Windows	491020	Copilot users will now be able to summarize PDF, Word, and PowerPoint email attachments in classic Outlook for Windows.	July 2025

Copilot Dashboard - Updated meeting metrics for Intelligent Recap	MC1085574 494687	Copilot Dashboard users can now view metrics that reflect both summarized and recapped meeting activity, offering a more complete view of Copilot's impact in Teams. These updates replace previous Copilot Assisted Hour calculations and meeting metrics with unified "summarized or recapped" metrics, helping leaders better understand usage across their organization.	September 2025
Use Copilot to rephrase text as desired through custom prompt in PowerPoint	494831 494833	Now you will be able to rewrite text using Copilot through natural language prompting in PowerPoint.	July 2025
Microsoft SharePoint: New web part for FAQs powered by Microsoft 365 Copilot	MC107497 482198	The feature will automatically generate FAQ content, supporting Event, Product, and Policy types.	July 2025

Expanded Input Box on Copilot Chat	496597	Users will be able to expand the Input Box to a full screen view when they type long prompts with lengthy context or instructions.	July 2025
Use ContextIQ file suggestions in Copilot Chat	497112	With a Microsoft 365 license, use the ContextIQ '/' to quickly add context to your Copilot Chat prompt from your files.	July 2025
1-click to create a Briefing page based on content in Copilot Notebook	497134	The 1-click page generation feature helps you complete tasks quickly. With a single click, Copilot creates a Briefing page based on your notebook content—no prompt writing needed.	July 2025
1-click to create a FAQ page based on content in Copilot Notebook	497133	The 1-click page generation feature helps you complete tasks quickly. With a single click, Copilot creates a FAQ page based on your notebook content—no prompt writing needed.	July 2025
Increased efficiency with auto-generated Copilot Pages	497161	Copilot Chat can automatically create and open a Page side-by-side when it detects a relevant scenario, enabling instant editing, steering, and sharing.	July 2025

Copilot in Outlook: Create a meeting from an email thread with Copilot	494154	The new "Schedule with Copilot" feature in Microsoft 365 allows users to automatically create meeting invitations from email threads	July 2025
Researcher is in Microsoft Word	497833	Researcher agent is now available in Microsoft Word, empowering you to tackle complex, multi-step research tasks with ease. Whether you're exploring new topics or synthesizing information, the agent delivers high-quality, accurate insights—helping you work smarter and faster.	July 2025
Use Copilot to rephrase text as desired through custom prompt in PowerPoint	494832	Now you will be able to rewrite text using Copilot through natural language prompting in PowerPoint.	July 2025
Reference an Excel file when creating a presentation with Copilot for PowerPoint	493733 493732 493731	You can now reference an Excel file when you create a presentation with Copilot within the PowerPoint application.	July 2025

Scope prompts to specific Channels in Teams in Copilot Chat	497915 429645	Users will be able to search for and select specific Teams Channels in the Context IQ menu to scope and ground their prompts in Copilot Chat, enabling more focused and relevant responses.	August 2025
Unified Conversations (Chat History) List in Copilot Chat	498545	This change will mean that users now see a single, streamlined list of all your conversations. No more switching between tabs or wondering where to look for specific conversations.	August 2025
Microsoft 365 Admin Center: Usage reports - Microsoft 365 Copilot search	497545	A new usage report will be available in the Microsoft 365 Admin Center for search in Microsoft 365 Copilot.	August 2025
Microsoft 365 Admin Center: Usage reports - Copilot Chat - Usage intensity and new app coverage	495549	The Copilot Chat usage report will include metrics on prompts submitted and expanded coverage across new host applications.	August 2025
List email attachments in M365 Copilot App	497909	Users will be able to list the file attachments that they received or sent over email in M365 Copilot App.	August 2025

Say "Hey Copilot" to activate voice conversations with the Microsoft 365 Copilot app on Windows	497848	With the Microsoft 365 Copilot app on Windows, say "Hey Copilot" to activate real-time voice conversations with Copilot.	August 2025
Copilot in Outlook: Immersive Search	498319	After completing a search in Outlook, a user will see a Copilot entry point that will take them to an LLM generated summary of their search query (emails, Teams messages and documents) within their Copilot side pane.	August 2025
Copilot in Outlook: Enterprise and Web Grounding for Draft with Copilot	497670	Draft with Copilot now has access to your enterprise data to help you craft high quality emails grounded in the right context.	August 2025
Copilot in Outlook: Summarize email with Copilot chat in Outlook	498320	Users without a Microsoft 365 Copilot license can now easily summarize emails in a single click, using Copilot chat. Users must have access to Copilot chat and pinning enabled to utilize.	August 2025
Copilot in Word: Easier access to Researcher in Microsoft Word	497913 497914 497833	The Researcher agent now has easier entry points on the Word canvas —making it faster to go from idea to polished research report without breaking your flow.	August 2025

Copilot in PowerPoint: Reference an Excel file when creating a slide with Copilot for PowerPoint	497537 497541	You can now reference an Excel file when you create a slide with Copilot for PowerPoint.	August 2025
Microsoft Copilot Dashboard in Viva Insights: Enhanced scope drilldown	495463	Leaders and managers can drilldown and explore data in Copilot Dashboard by indirect groups, unlocking a new layer of visibility into Copilot adoption and impact.	August 2025
Reference a PDF file when creating a slide with Copilot for PowerPoint	497540 497541 497536	You can now reference a PDF file when you create a slide with Copilot in PowerPoint.	August 2025
Frontier and Microsoft agent user request approval flow in the Microsoft 365 Admin Center	494809	For Admins, agents in the Frontier program can be managed through the Microsoft 365 Admin Center. They are listed under the agents & connectors tab in Copilot Control System, where you can view all agent inventory for your organization. Agents built by Microsoft and available in the Frontier program will be displayed in the Agent Store.	August 2025

Copilot in Word: Auto-update document sections from new sources	497937	Easily refresh parts of your document using content from other files—without copying and pasting. Copilot keeps your formatting intact while pulling in the latest updates from new sources.	August 2025
Copilot in PowerPoint uses enterprise assets hosted on SharePoint OAL or Templafy when creating a slide	496365 496367	Once your organization's assets are integrated into a SharePoint Organization Asset Library (OAL) or connected through Templafy to Microsoft 365 Copilot, you'll be able to easily create slides using your organization's approved images	August 2025
Copilot in Excel: Improved Python-powered answers in Copilot in Excel	490212	Copilot in Excel now provides improved direct answers to your data analysis questions, using Python.	August 2025
Copilot in Edge: Summarization, Translation, and Citation will soon be supported by Microsoft Copilot and Microsoft 365 Copilot Chat in our menus	497135	Menus in Edge where the user has highlighted content in the browser will soon support a summarization, translation, and citation with Microsoft Copilot and Microsoft 365 Copilot Chat.	August 2025

Sections with Copilot in SharePoint	498547	Sections with Copilot is a new SharePoint authoring tool that allows users to create full-fidelity SharePoint sections with just a prompt.	August 2025
Copilot in Word: Document snapshot in Word personalizes output	497297	The document snapshot helps the user focus faster by surfacing the most important information for them based on their personal context.	September 2025
Copilot in Outlook: Copilot Proactive Drafts	497671	Copilot will detect emails that are most likely to need a response and pre-generate three options for you review and select from.	September 2025
Copilot in Outlook: Continue editing in Outlook from Copilot Chat	494510	When Copilot detects that you're trying to write an email—like saying “Draft an email to my team thanking them for their hard work on Project K”—you’ll see an “Edit in Outlook” button.	September 2025
Microsoft Copilot: Press and hold Win + C or Copilot key to activate voice on the Microsoft 365 Copilot app	497849	Press and hold Win + C keys, or the dedicated Copilot key for applicable devices, and the Microsoft 365 Copilot app will activate voice	September 2025

Microsoft 365 Admin Center: Agent-Level Controls for Pay-as-you-go	496363	This feature introduces admin controls for managing AI agents on a consumption basis within Microsoft 365 Copilot.	September 2025
Copilot Dashboard: Scoped Access	497111	Scoped access enables managers to view Copilot insights specific to their own organizations both on the Copilot Dashboard and in additional Copilot reports on the Reports page.	September 2025
Access SharePoint agents in the Microsoft 365 Copilot app	MC1099692	Microsoft 365 will soon allow users to access recently used SharePoint agents directly within the Copilot app.	September 2025
Microsoft Copilot (Microsoft 365): Lists in Context IQ	422308	Users will be able to search for and select SharePoint Lists through the Context IQ menu to help ground their prompts when using Copilot Chat.	January 2026

Viva Engage

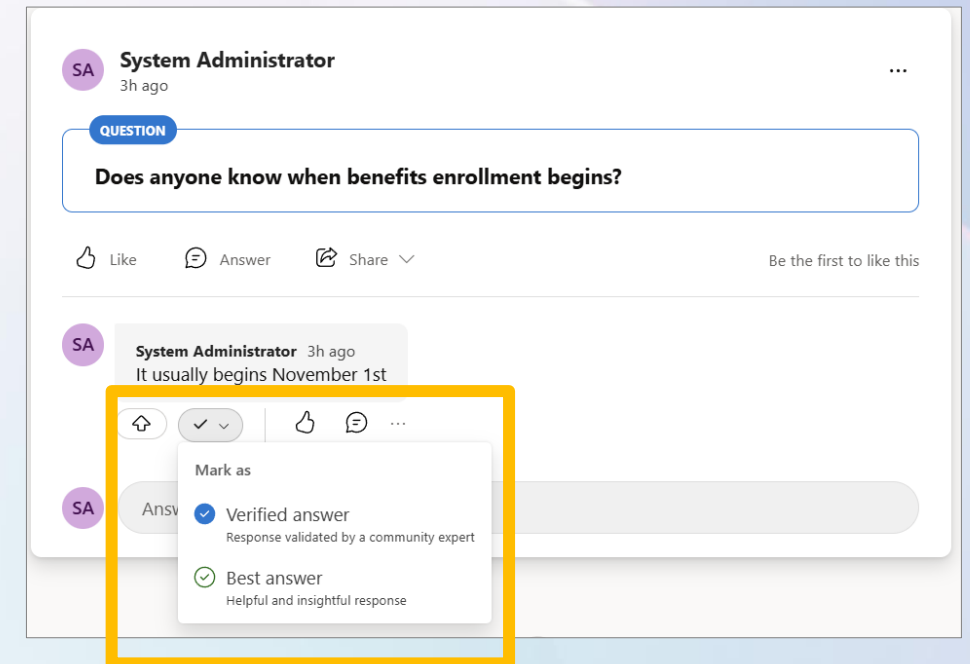

Viva Engage: Streamlined verified answers for community experts

Viva Engage is **consolidating answer verification options** to "verified answer" for community experts to streamline and reduce confusion.

After this change:

- **Community experts will only see the "verified answer" option**
- Question askers will continue to only see the "best answer" option
- Community admins will be able to choose between both options

No admin action is required, but community admins and experts should be informed of the update for workflow adjustments.

For reference only: Current user experience for marking answers for Community experts

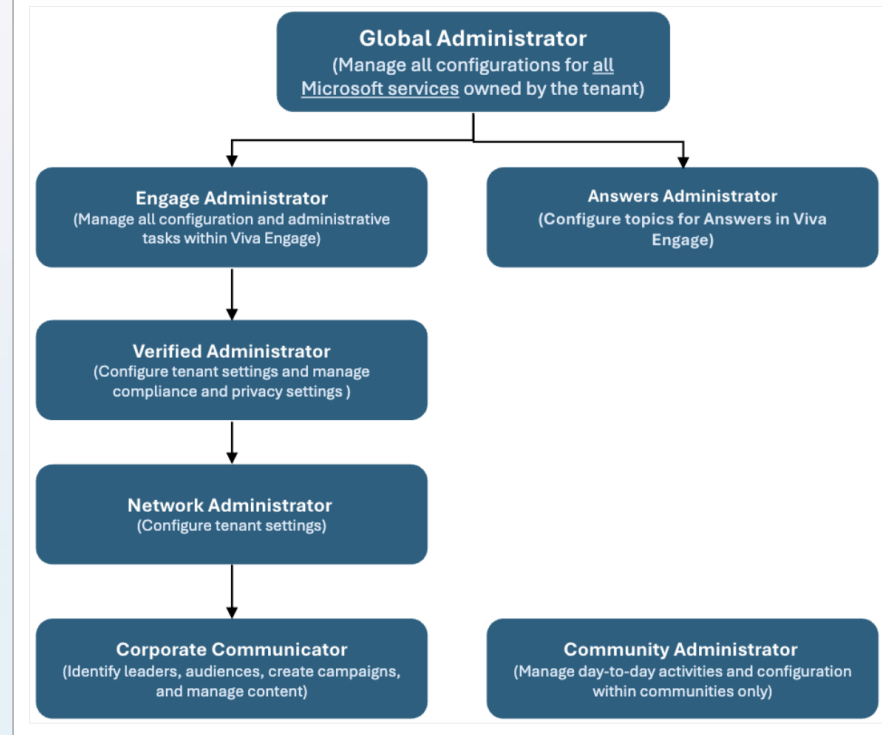

Viva Engage: New Microsoft Graph APIs for Viva Engage role management

New Viva Engage role management APIs in Microsoft Graph are **now available in beta**, allowing IT admins to automate and manage roles like Corporate Communicator and Verified Administrator.

These **new APIs provide greater flexibility and control** for IT admins by enabling:

- Automated role assignments
- Programmatic retrieval of role data
- Streamlined admin workflows across large organizations

Role hierarchy

For reference only: Viva Engage admin roles and hierarchy

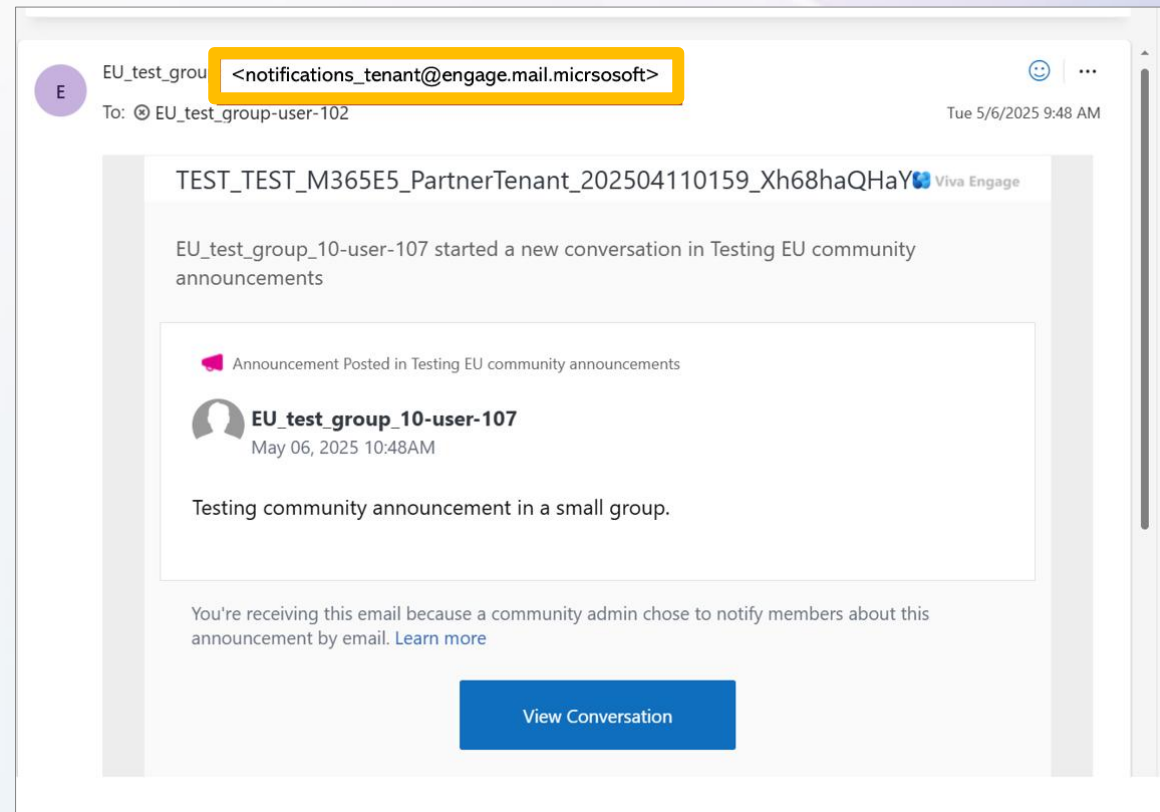

Viva Engage: Email sender domain migration from @yammer.com to @engage.mail.microsoft

Microsoft 365 is **updating email sender domains** for Viva Engage from @yammer.com to new domains for a consistent brand experience.

The domain will vary by region:

- U.S. and global regions will migrate to **@engage.mail.microsoft**
- EU regions will migrate to **@eu.engage.mail.microsoft**

Admins **may need to update transport rules, email gateways, and user Outlook rules** if custom configurations based on the old domain are used.

***For reference only:** Sample email notification with new domain for U.S. and global regions*

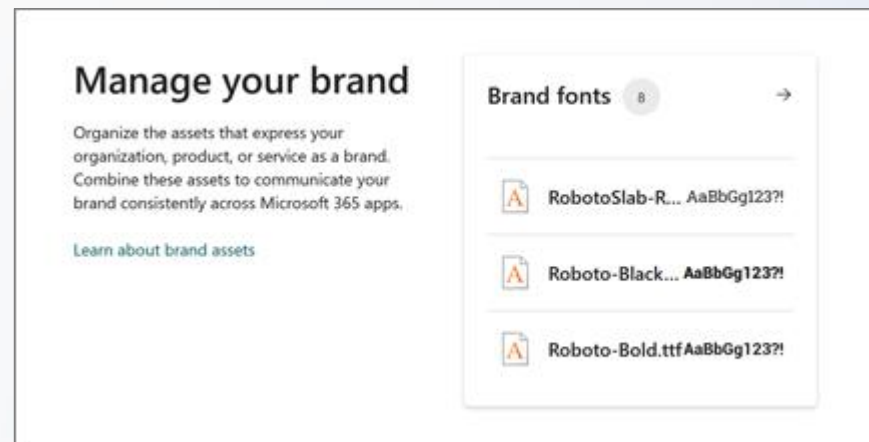

Viva Amplify

Viva Amplify: Custom font and theme support for Viva Amplify

Viva Amplify now supports **custom themes and fonts published to Brand Center**, empowering communicators to align their campaigns with brand identity and visual consistency across channels like Outlook and SharePoint.

For reference only: Uploaded custom fonts files in the Brand Center app

Viva Amplify: Copilot enhancements for smarter authoring

With our latest release, Copilot is now smarter and more helpful than ever, leveraging your files and even meeting content to generate high-quality communications with ease.

Key enhancements include:

- **Smarter prompt tuning:** We've fine-tuned how drafts and rewrites are handled, resulting in clearer, better-formatted output that aligns with your tone and goals.
- **Create content from files and meetings:** You can now use Word and Excel files, or even meeting recordings, as inputs to help generate content.
- **Unified content generation flow:** We've migrated to a common service that brings a consistent and scalable experience across all your AI tools in SharePoint and Viva Amplify.

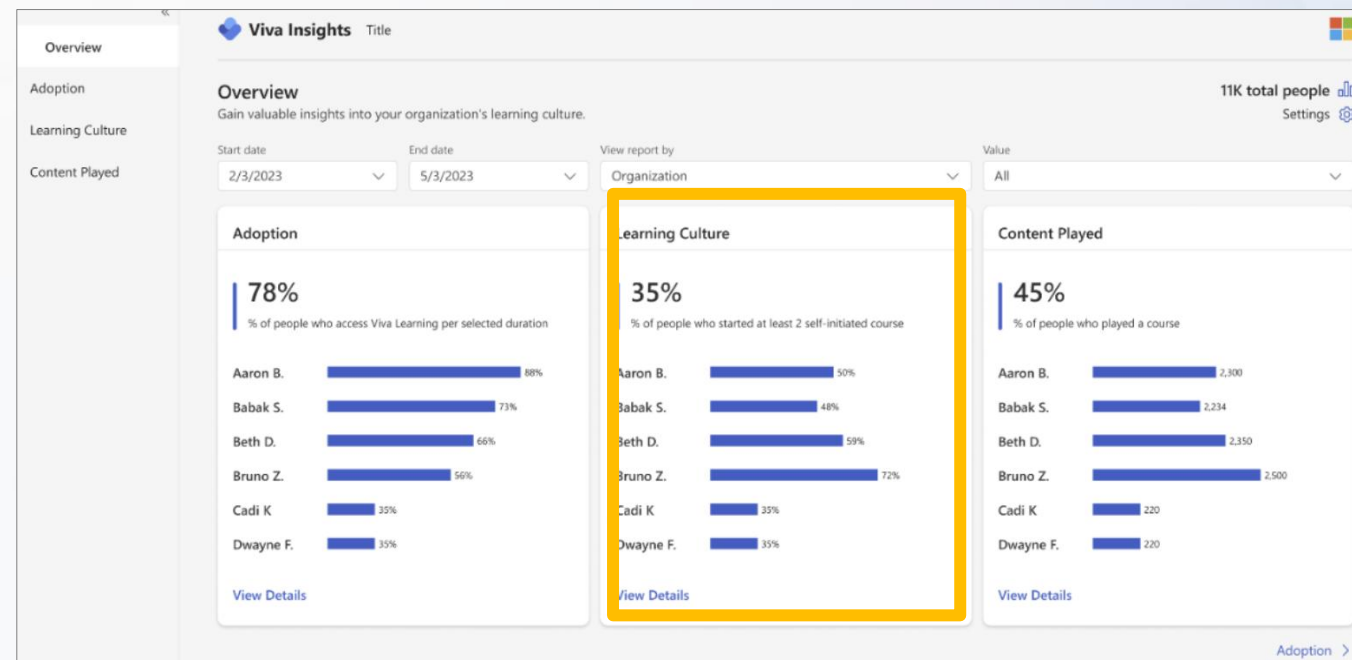

Viva Insights

Microsoft Viva Insights: New Viva Learning Culture report

Microsoft is introducing the Viva Learning Culture Report in Viva Insights, offering **in-depth employee engagement metrics with Viva Learning content, visualized in Power BI**. Eligible users should ensure they have the necessary licenses to access this feature.

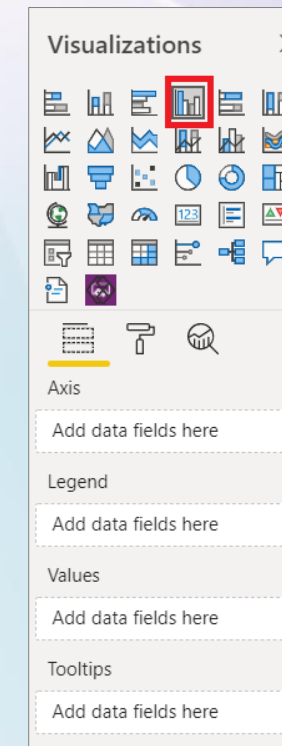

Viva Insights Learning Culture Report

Microsoft Viva: Customize visuals and pages in embedded Power BI reports

Analysts can now use **embedded PowerBI edit tools to customize their reports** to add visuals, pages and change themes, text and more, and then publish it to their organization.

For reference only: Power BI visualization options

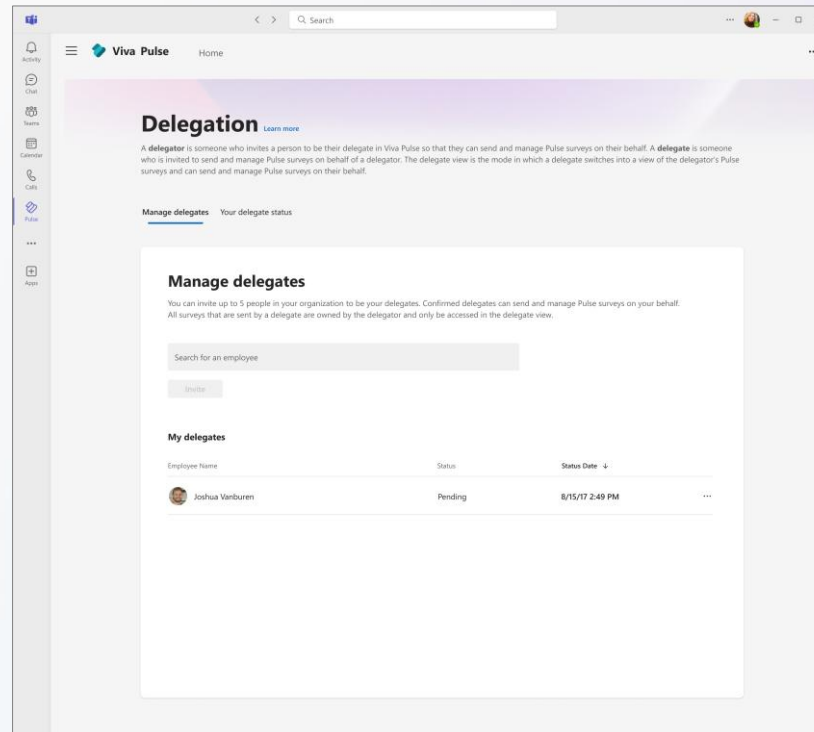

Viva Pulse

Viva Pulse: New delegation feature

Microsoft Viva Pulse is introducing a **delegation feature**, allowing designated roles **to manage Pulse surveys on behalf of organizational leaders.**

Delegation feature for Viva Pulse

Microsoft Teams

Microsoft Teams: Teams meeting join URL validation

Microsoft Teams will **validate meeting join URLs to prevent altered or rewritten links from being used**, starting on the following dates:

- September 30, 2025 for Worldwide
- November 30, 2025 for GCC/DoD

Security products must avoid rewriting these URLs to prevent users from being blocked; this can be done by either whitelisting Teams URLs or disabling rewriting for Teams links.

Microsoft Teams: New file attachment feature in external 1:1 and group chats

Microsoft Teams is introducing a feature allowing file attachments in external 1:1 and group chats, enhancing collaboration.

This feature is off by default. Admins can enable this feature by setting the ***FileSharingInChatsWithExternalUsers*** parameter to "True" in the *CsTeamsFilesPolicy* PowerShell cmdlet.

Users will see an "Attach file" option in the + menu of the chat compose box when messaging external users

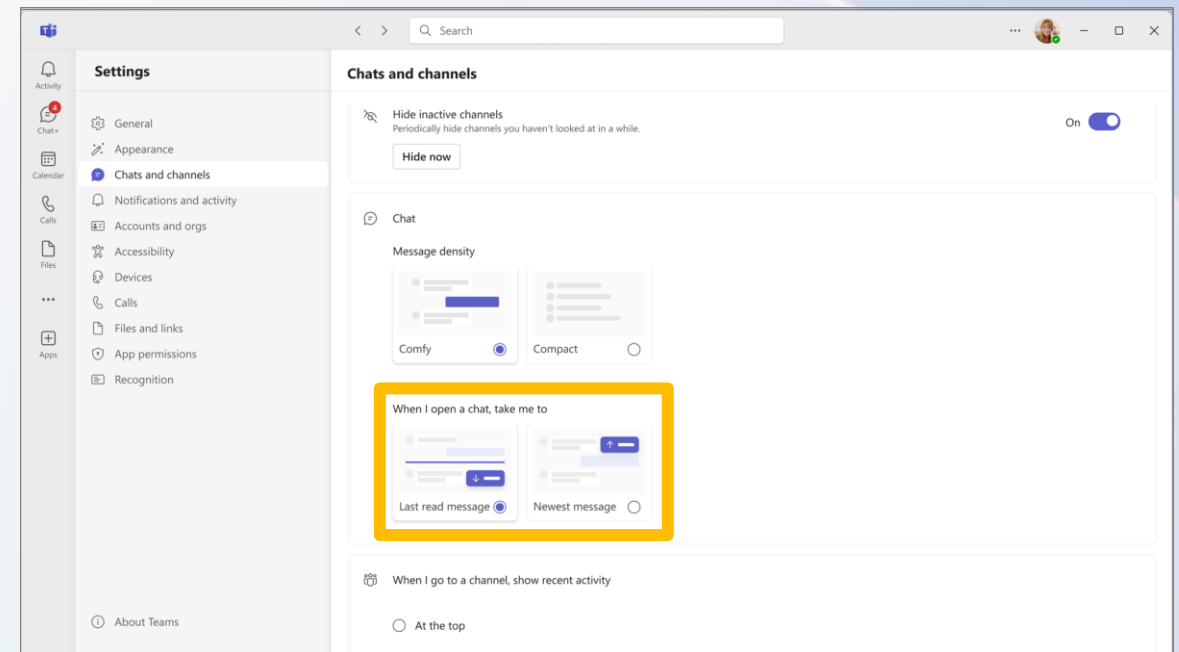

Any file shared by an external user will have an "External" tag

Microsoft Teams: When selecting "Unread Chats," users will land on the last read message

Microsoft Teams will soon update the **Unread Chats feature** to give users more control over where they land when opening unread chats:

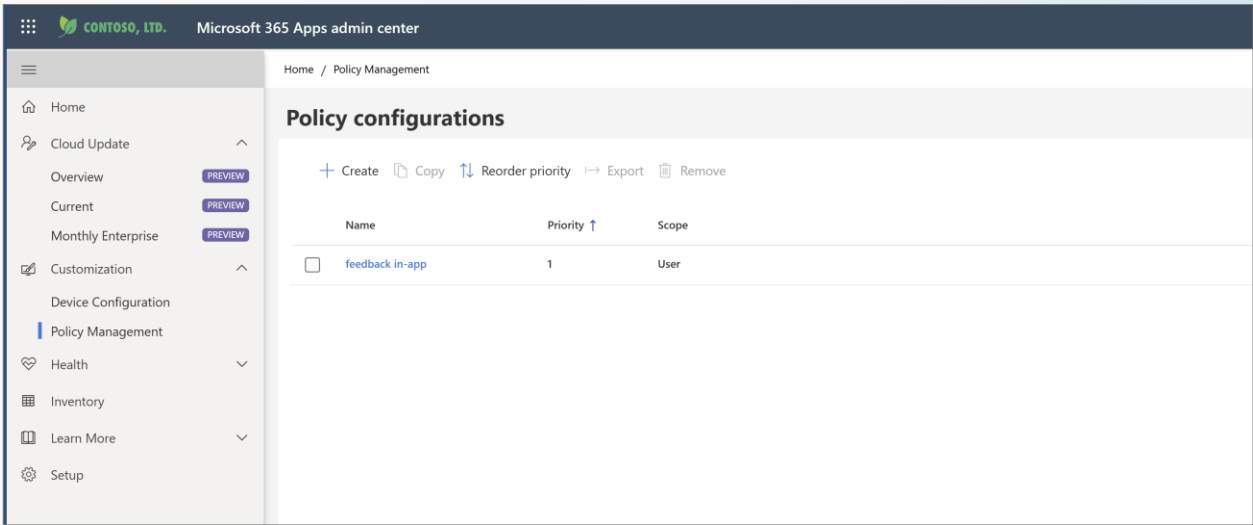

- **Last read message (default):** Users will land on the last message they read allowing them to resume conversations without scrolling. Users can jump to the newest message with the *"Jump to newest"* button.
- **Newest message (optional):** Users can change their preference in *Settings > Chats and channels > Chat > When I open a chat, take me to* and choose to land on the newest message. Users can jump to the last read message with the *"Jump to last read"* button.

Microsoft Teams: In-app survey feedback will be managed by default with Microsoft 365 Cloud Policy

Survey feedback for **the Teams desktop and web clients will no longer use Teams-specific feedback policies**; instead, **survey feedback will now be governed by the same Microsoft 365 Cloud Policy** that controls other feedback entry points (such as *Give a compliment* or *Report a problem*).

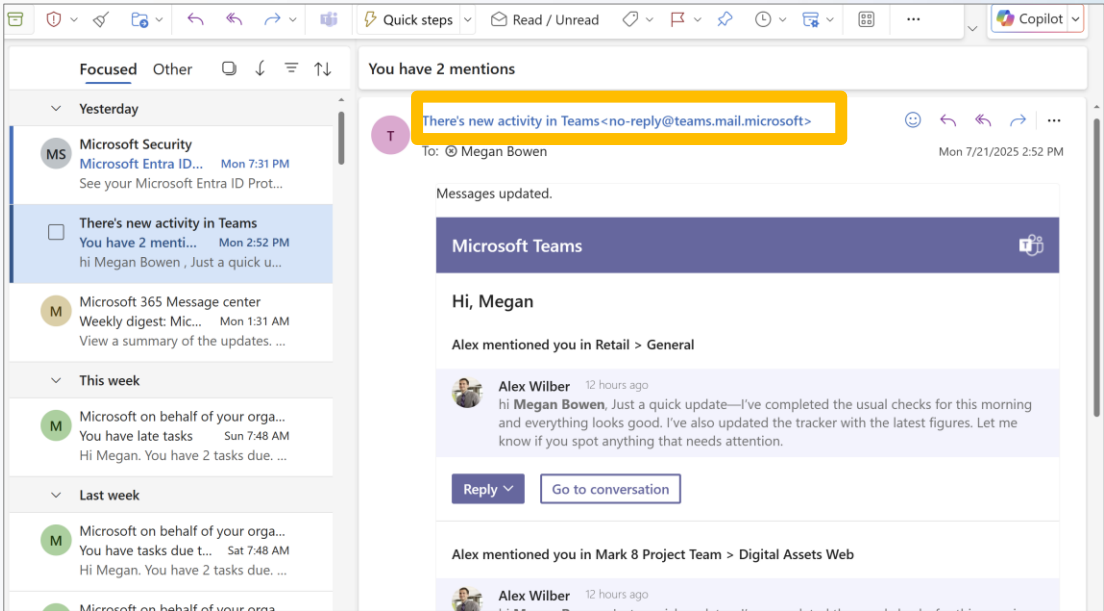

- This unification simplifies administration by enabling centralized control of all feedback experiences.
- Teams for iOS and Android will continue to use Teams-specific feedback policies for now.

For reference only: Policy configuration for Microsoft 365 Cloud Policy

Microsoft Teams: Missed activity emails for Teams will now come from a unified domain

Missed activity emails for Microsoft Teams will now come from “no-reply@teams.mail.Microsoft” instead of “noreply@*email.teams.microsoft.com”. This change aims to give users a more consistent and secure email experience.

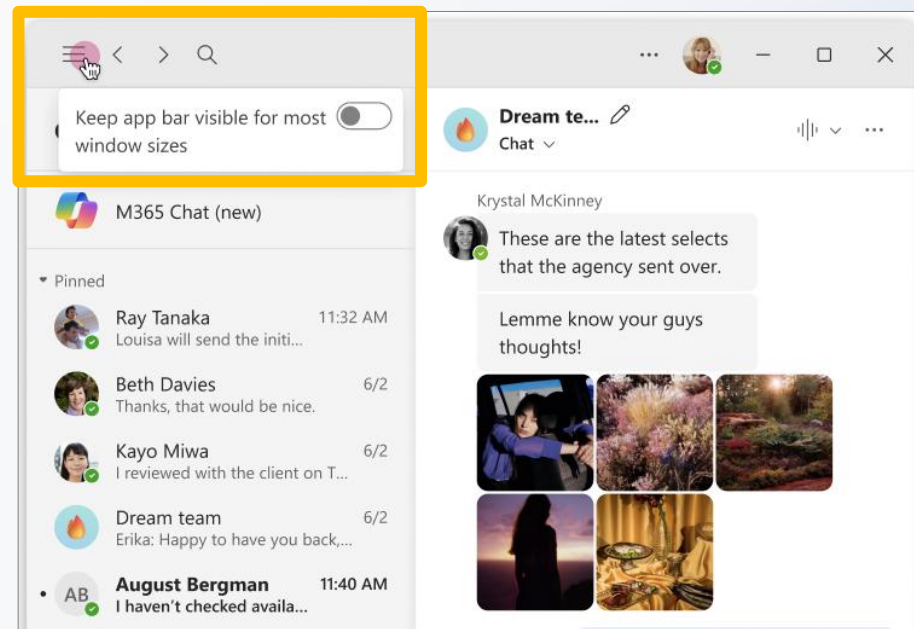

An example of a missed activity email being sent from the unified domain

Microsoft Teams: Pin the app bar from the context (hamburger) menu

Microsoft Teams is introducing the ability **to pin the app bar from the hamburger (≡) context menu**. This provides users with more flexibility in customizing their Teams layout, making it easier to access frequently used apps and tools.

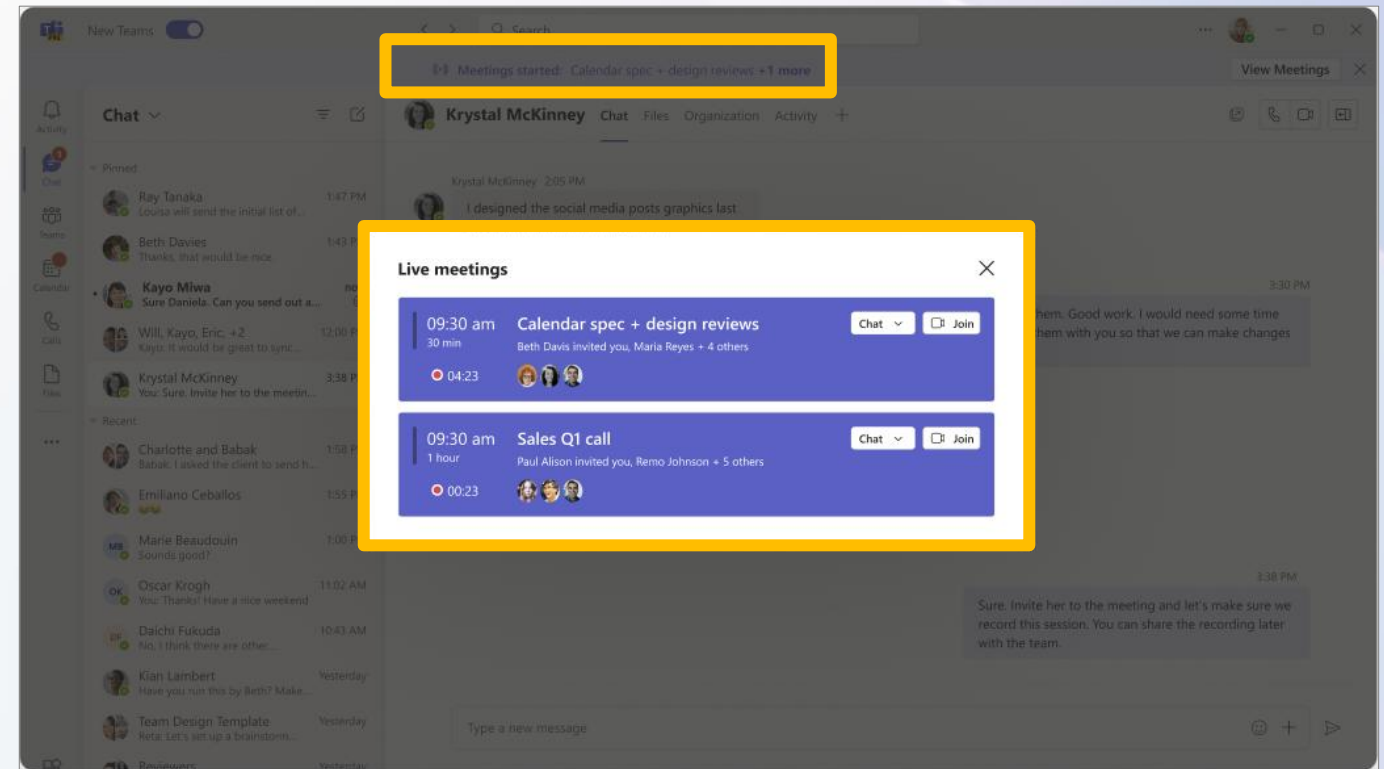

Microsoft Teams: Meeting join bar

Microsoft Teams is introducing a **new banner that allows users to join meetings they've RSVP'd to** as "Yes" or "Tentative".

This feature will be on by default. If desired, users can disable the banner by going to *Settings > Notifications > Meeting Banner*.

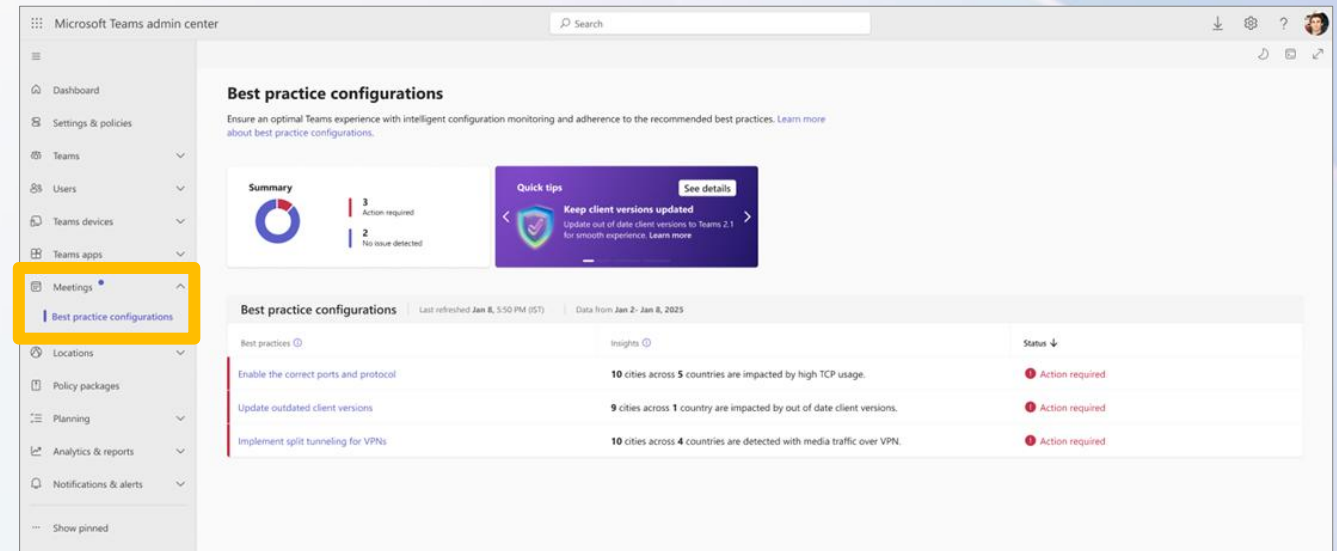

Microsoft Teams: Additional monitoring scenarios in the Best practice configurations dashboard

The Best practice configurations dashboard in the Teams Admin Center is **expanding to monitor additional scenarios** to enhance meeting experiences and align with Microsoft's recommended practices.

The dashboard will monitor three additional scenarios:

- Bypass local proxy
- Bypass cloud proxy
- DNS resolution failures

Admins can export insights and use recommended remediations to address flagged issues.

Best practice configurations dashboard in the Teams Admin Center

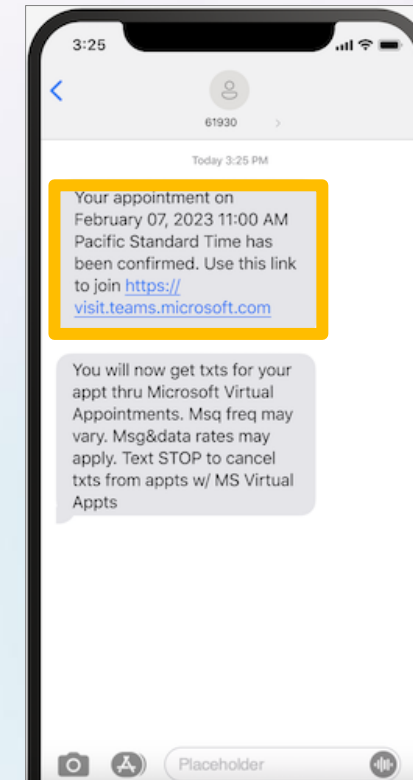

Microsoft Teams: SMS support expands to Australia

Microsoft Teams is **expanding SMS appointment notifications to include Australian phone numbers** for users with a Teams Premium license, enhancing global communication capabilities.

Organizers with a Teams Premium license will be able to send SMS notifications to phone numbers in Australia using Microsoft Bookings, the Virtual Appointment Teams meeting template, and other Teams experiences.

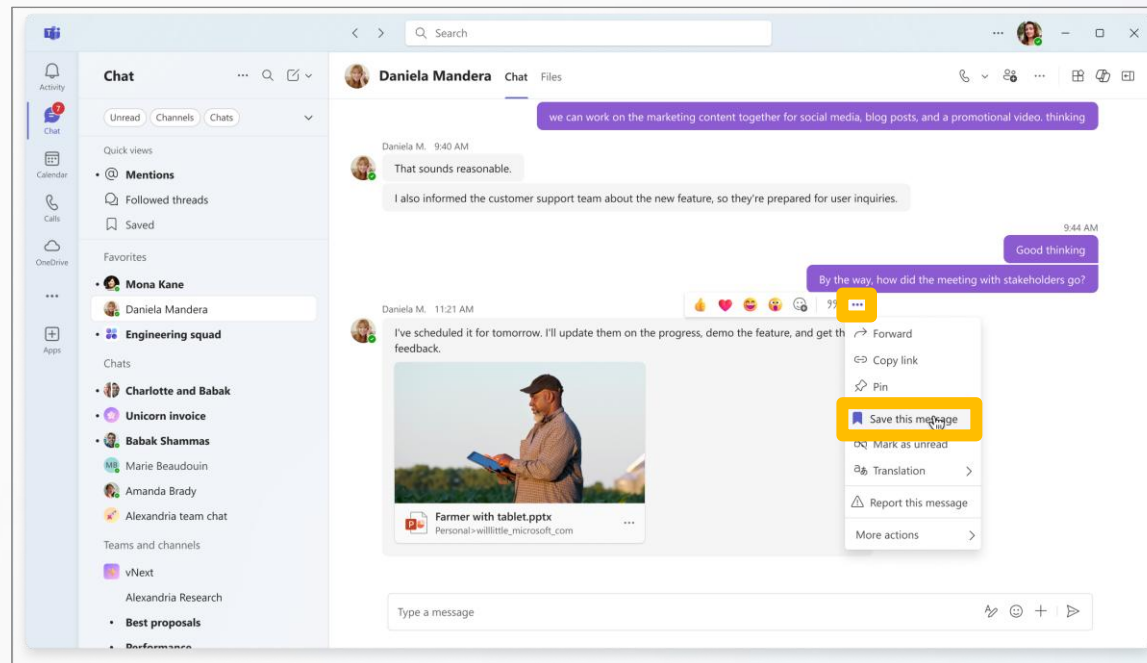

Example of an SMS appointment notification

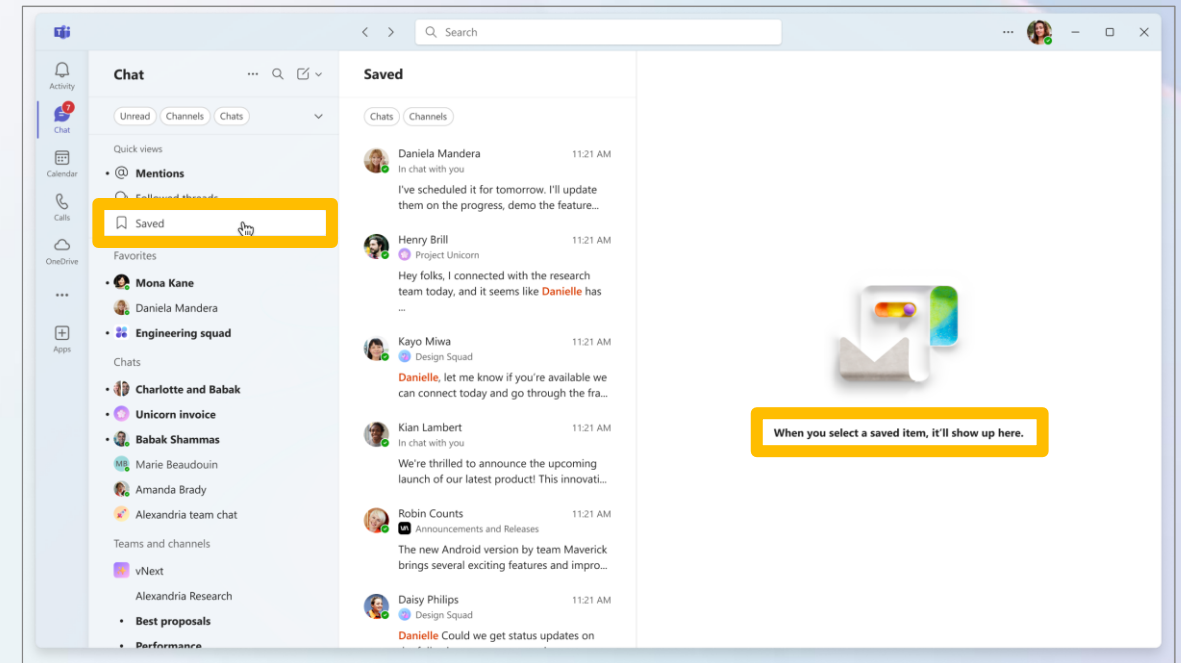

Microsoft Teams: Users can save chats and channel messages for later

Microsoft Teams is introducing a feature that lets users **save chat and channel messages and access them later from the *Saved view*** in their Chat or Teams list, enhancing workflow efficiency. The feature will be enabled by default.

Users can select "Save this message" in the three-dot menu

The saved message will display in the "Saved messages" list

No public documentation at the time of writing

Teams Desktop: Meeting search enhancements

The **search experience** in Microsoft Teams Desktop is improved to make it easier for users **to find and act on meetings - past, present, and future - directly from the search bar.**

From the search results, users can:

- Join ongoing meetings
- View recaps of past meetings
- RSVP to upcoming meetings
- Access meeting chats and shared artifacts

For reference only: Users can search for meetings by typing the meeting name in the Teams search bar

Teams Desktop: Compact notification size for users

Microsoft Teams is introducing a compact toast notification size for Windows users. This feature aims to reduce screen clutter and distractions.

This feature will be off by default. Users can enable it via *Settings > Notifications > Choose Compact*.

Windows users will be able to choose compact toast notification sizes in Teams by navigating to: "Settings" > "Notifications" > "Choose Compact"

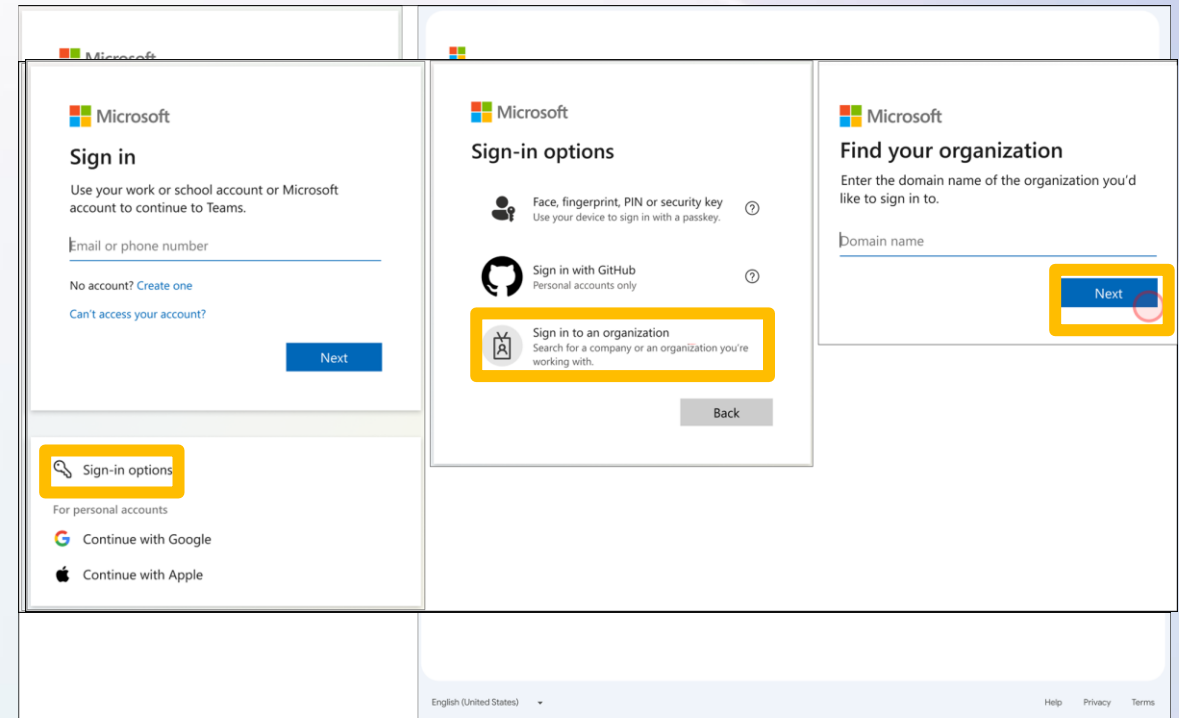

Teams Web: Private Preview for new Apple and Google sign-in options

Microsoft Teams on the Web is launching a **private preview enabling a limited group of consumer users to sign in using Apple or Google credentials**.

No action is required from admins; however, if admins want to ensure users are directed to a branded or custom sign-in experience, **consider using domain hints to bypass the common endpoint**.

- Information on branded and custom sign-in experiences can be found in the links below.

NOTE: These options are intended for consumer Microsoft accounts and **may be visible to both consumer and enterprise users**, depending on your authentication configuration.

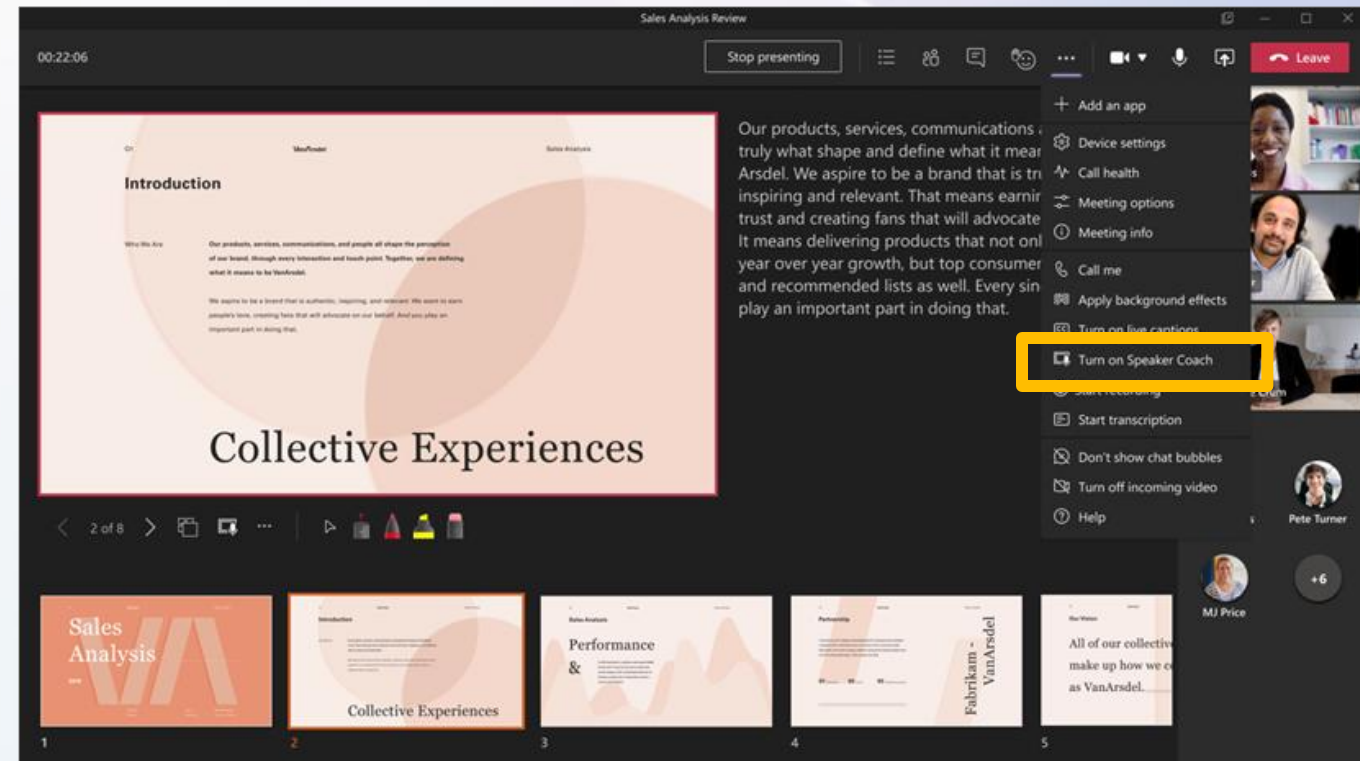

Teams Events: Speaker Coach (Preview) will retire

Microsoft will retire the "Speaker Coach" feature in Teams, which was previously available in Preview. The feature will not be moving to General Availability.

Inform users who may have used "Speaker Coach" about its removal.

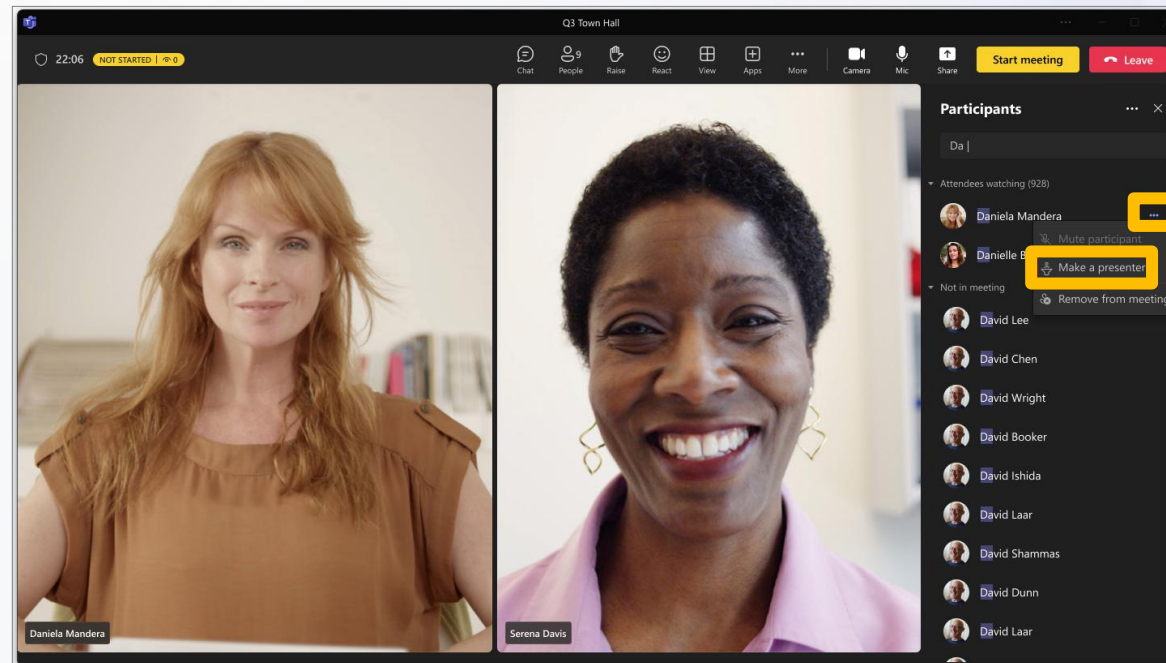

"Speaker Coach" in Teams meetings

Teams Events: Presenters can promote attendees to the green room

Microsoft Teams is updating the green room feature to allow presenters to easily **promote attendees from the waiting room to the green room using the Participants roster.**

Organizers and presenters in the Green room can promote an attendee by finding their name in the roster, clicking the three dots > 'Make a presenter'

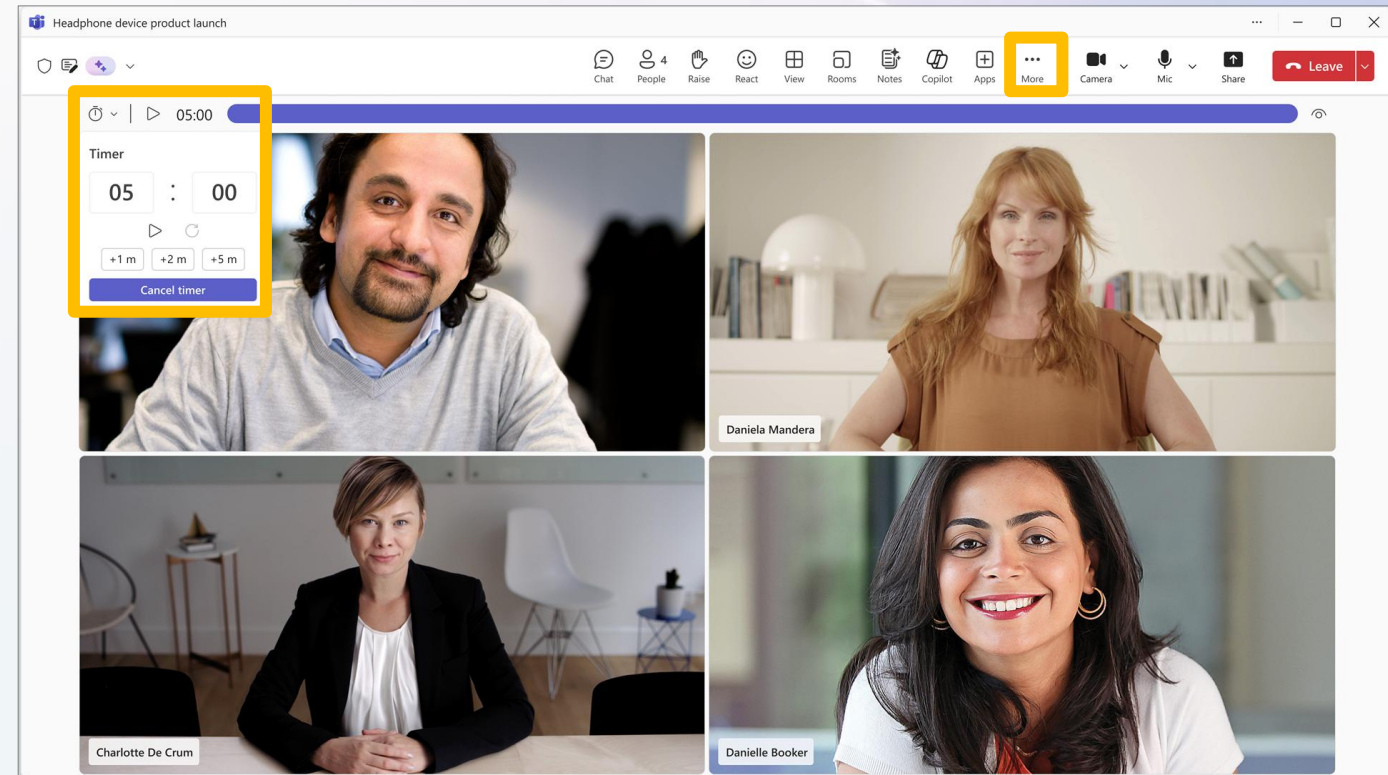

Teams Events: Countdown timer for Teams meetings

Microsoft Teams is introducing a **countdown timer feature for meetings**, allowing participants to set timers up to 100 minutes to manage time effectively.

The timer includes:

- Visual and audio alerts
- Color changes as time runs out
- Negative counting after zero

This feature will only be available in scheduled meetings without defined roles.

The new timer will be accessible from the "More" menu in the meeting controls

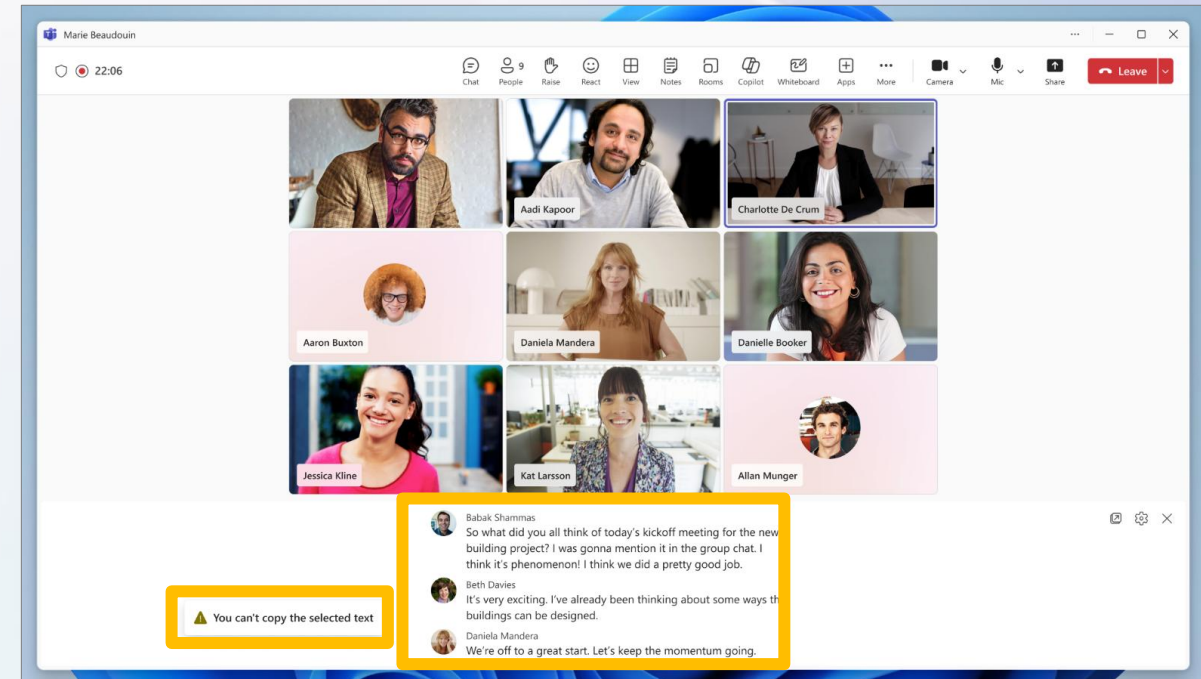

Teams Events: Usability and privacy improvements for live captions and live transcript in meetings

Microsoft Teams is **enhancing usability and privacy for live captions and transcripts.**

Improvements include:

- Scrollable live captions
- Copying text from live captions is now disabled
- Preventing the auto-opening of the *Live transcript* panel

These updates aim to reduce distractions, support compliance, and improve user control.

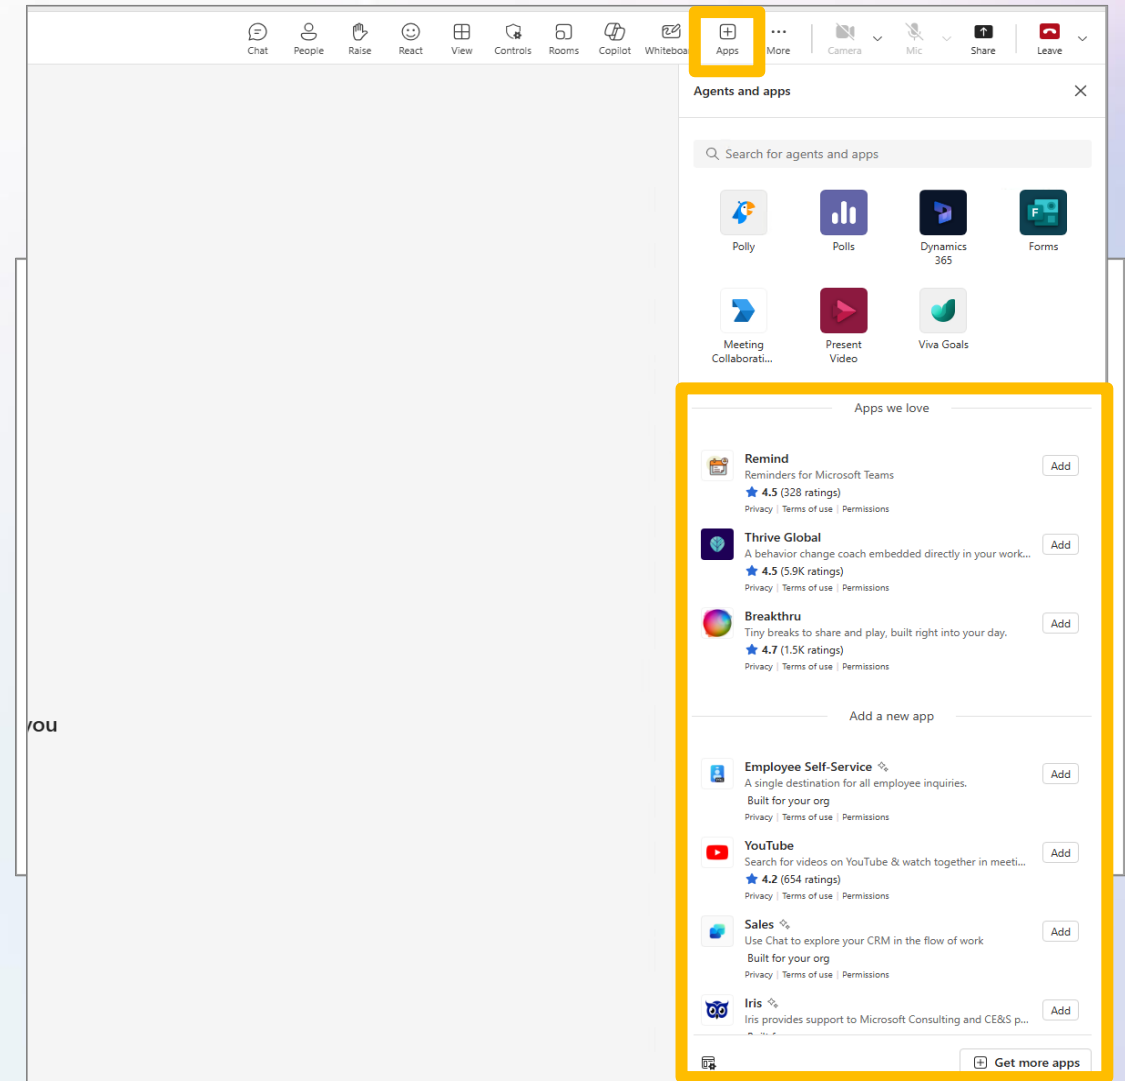

The message "You can't copy the selected text" will appear if a user tries to copy live captions

Teams Apps: App ratings will be visible in context

Microsoft Teams will soon **display app ratings in context** to enhance user trust, app discoverability, and decision-making.

- This change will also encourage developers to maintain higher app quality standards, improving the overall Teams app ecosystem.

Teams Phone: Line key configuration on Teams Phone devices from the Teams Admin Center

In the Teams Admin Center, a new capability will **allow IT admins to configure line keys on Microsoft Teams-certified phone devices**.

- This enhancement simplifies setup and management by enabling assignment of line keys to contact types such as speed dials, call queues, and shared lines.

This feature will be available by default on Teams phone devices that are running the latest application version; the phone device must also be visible in the Teams Admin Center.

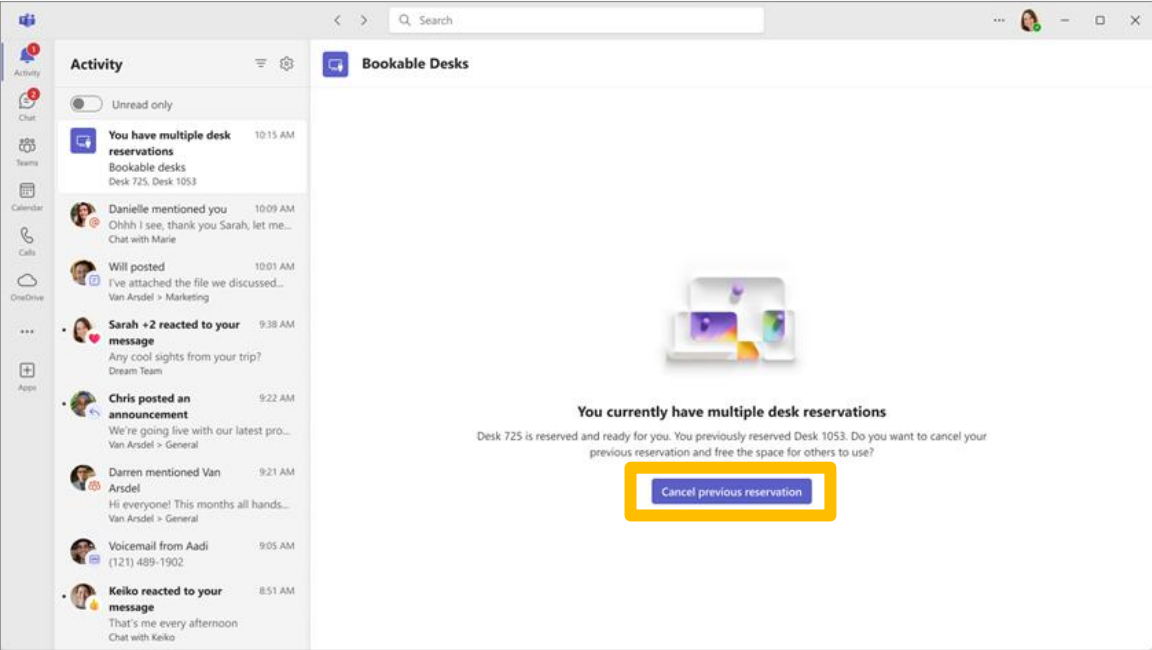

Admins can assign line keys in the Teams Admin Center by going to "Teams Devices" > "Phone" (UI elements subject to change)

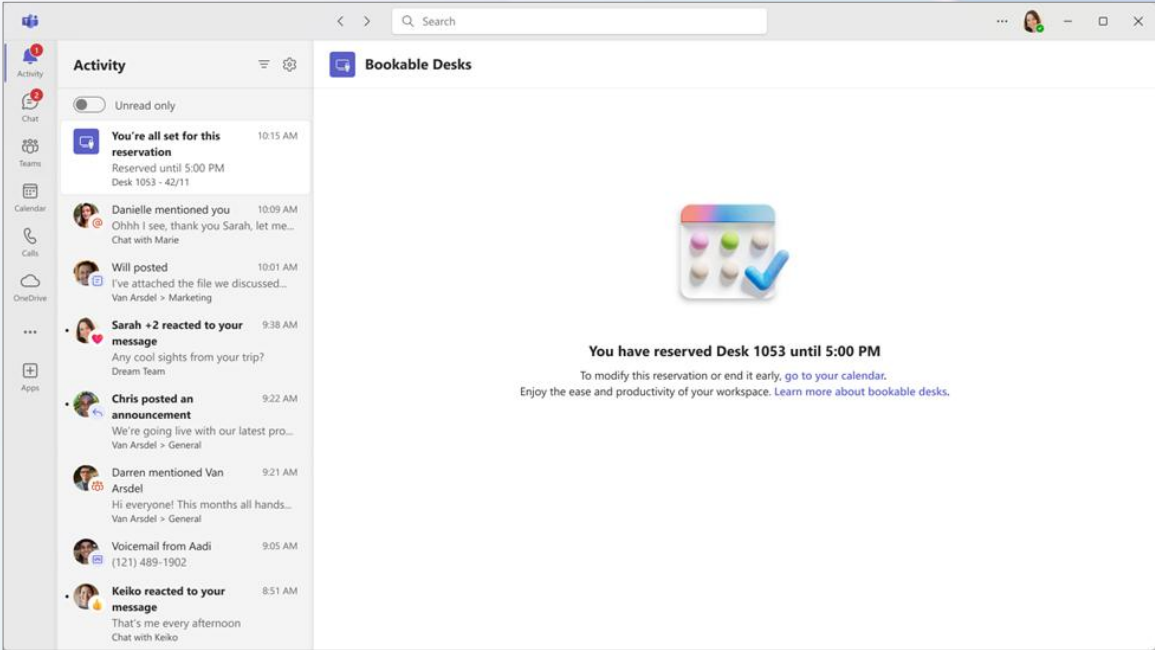

Teams Devices: First run experience and prompting users to release previous reservations

Users will be **notified of multiple desk reservations and prompted to release previous ones** when using bookable desks, with an initial notification providing clarity.

Notification shown when a user connects to a peripheral linked to a different desk than the one reserved

The new in-depth notification for the first time a user receives any notification about a bookable desk

Threads in channels	488300	Threads in channels allow you to start a side conversation within a channel and focus on specific topics while keeping the main conversation clutter-free. You can reply to specific messages and create a separate thread, helping to minimize distractions and foster better collaboration.	June 2025
New bilateral chat policy for restricting external group chats to a maximum of two organizations	490566	Facilitate creation and maintenance of external group chats with bilateral policy enforcement where members in the chat can belong to a maximum of two tenants. Allow tenant admins to control bilateral chat policy and apply it to users and groups.	June 2025
Apply partial settings for Android devices using configuration profiles in the Teams Admin Center	313800	In the Teams Admin Center, admins can now modify, review, and apply configuration settings to Android devices without overriding other settings ensuring only the desired changes are made.	July 2025
Branding will extend to town halls and webinars	MC1092431	Microsoft Teams Premium branding is expanding to include town halls and webinars, enhancing brand engagement through consistent branding elements in various event types.	July 2025
Default Teams Calling global policy to enable users to transcribe or record calls	494151	We're updating the default global calling policy for new tenants to allow users to transcribe or record calls. Previously, these settings were turned off by default in the host global policy. With this update, recording and transcription will be enabled by default in the global calling policy for new tenants and existing tenants who have not modified the host global policy.	July 2025

Inclusive meeting enhancements for sign language users	494843	Sign language users will benefit from an enhanced meeting experience. Interpreters will be clearly identified in the participant roster and visually distinguished throughout meetings. Deaf and hard-of-hearing participants who use sign language will be automatically detected and elevated to active speaker status, ensuring equal prominence with spoken audio participants.	July 2025
--	------------------------	---	-----------

Suggested contacts for call transfers on Teams phone devices	495457	With this feature, you can reduce clicks and save time with intelligent call transfer suggestions based on your recent activity and call history on Teams phone devices.	July 2025
Custom ringtone behavior and ringtones for assigned line keys	495451	Personalize your Teams phone experience by setting unique ringtones and choosing how each line key alerts you—ring only, ring with flash, or flash only. This feature is supported across touch, non-touch, and sidecar devices, giving you full control over how you stay notified.	July 2025
Remote log collection in the Teams Admin Center	491439	Teams Administrators will have the ability to remotely collect client diagnostics logs for troubleshooting from users' devices, aiming to minimize or eliminate the need for user intervention and workflow disruption previously required for collecting diagnostics logs.	July 2025
Advanced Collaboration Analytics for GCC	493742	Advanced Collaboration Analytics for GGC provides Teams admins with insights into external collaboration patterns - covering teams, federated domains, channels, guests, and internal users - along with recommended actions to enhance security for external collaboration.	August 2025
Edit and manage Teams Town Hall instances in Outlook	496986	Organizers and co-organizers can now easily edit the details of Teams Town Hall instances. A direct link to the Teams Town Hall edit page is now accessible from Outlook calendar. This enhancement brings the same seamless editing and registration management experience already available in webinar, bringing a consistent experience across all event types.	August 2025

SQL-like commands in the search bar	496590	Efficiently narrow down your search results by using SQL-like commands in the search bar. Users can quickly filter messages, files, or conversations with precise queries such as from:username, with:username or in:channel.	August 2025
New VDI solution for Teams optimization in Amazon WorkSpaces	498355	A new Virtual Desktop Infrastructure (VDI) solution for Microsoft Teams is now available for Amazon WorkSpaces (Personal and Pooled). This update introduces multimedia offloading and optimization, enabling a high-definition Teams experience—including audio, video, and screen sharing—by offloading media processing to the local device via the SlimCore engine.	August 2025
Support for making a silent test call	490055	Silent Test enables IT administrators to proactively run synthetic Teams call simulations to specific subnets, helping assess network readiness and detect potential issues before they impact users, ensuring a seamless communication experience.	August 2025
Simultaneous role-specific Teams Town hall and Webinar views in Teams Rooms	496368	With a Teams Room on Windows system, both attendees and presenters for Teams Town halls and Webinars can now simultaneously enjoy unique experiences in the same room. This new feature sets the in-room viewing experience on the front of room display to attendee view by default so presenter-specific features, such as the green room and backroom chat, or off-stage presenters are hidden.	September 2025
Deploy Teams frontline worker pilot in the Teams Admin Center	498226	Deploy a frontline worker (FLW) pilot in the Teams Admin Center.	September 2025

Preview of multiple camera view in Teams Rooms on Windows	496148	When multiple camera views are enabled in Teams Rooms on Windows, the preview video on the front-of-room display and the camera settings dialog will show multiple camera views. This feature allows in-room users to be aware of all camera streams that are simultaneously streaming to remote users. This feature is available with the Teams Rooms Pro license.	September 2025
Noise Suppression for Dial-In Participants in Teams Audio Conferences	496150	Microsoft Teams will soon support noise suppression for dial-in participants. This feature automatically filters out background noise (e.g., traffic, typing) for users who join meetings via phone (PSTN). It enhances clarity and reduces distractions for all meeting participants.	September 2025
Slash commands for apps	495002	You can now interact with your favorite apps directly from Teams chat and channels compose box using slash commands. Type "/" and start interacting with Apps and Agents, invoke workflows and more.	September 2025
Automatically set work location by connecting to a Wi-Fi network	488800	When users connect to their organization's Wi-Fi, Teams will automatically set their work location to reflect the building they are working in.	September 2025
Rule-based enablement of Microsoft 365 third-party apps in the Teams Admin Center	485712	This feature allows M365 administrators to define specific criteria for approving third-party Teams applications within their tenant. Administrators can select from a list of predefined, safe criteria, ensuring that only trusted and compliant applications are made available under this rule.	September 2025

Network Strength icon to understand the strength of your network	MC1077865 414513	Quickly understand the strength of your network along with suggestions to conserve bandwidth if you are experiencing networking issues.	October 2025

OneNote for Windows: Export to Word 97-2003 format will retire

The option to **export a OneNote** for Windows desktop section or page **as a Word 97-2003 document (.doc)** is being retired.

- Users should transition to exporting content using modern formats like Word Document (*.docx).

Export notebook to Word in OneNote

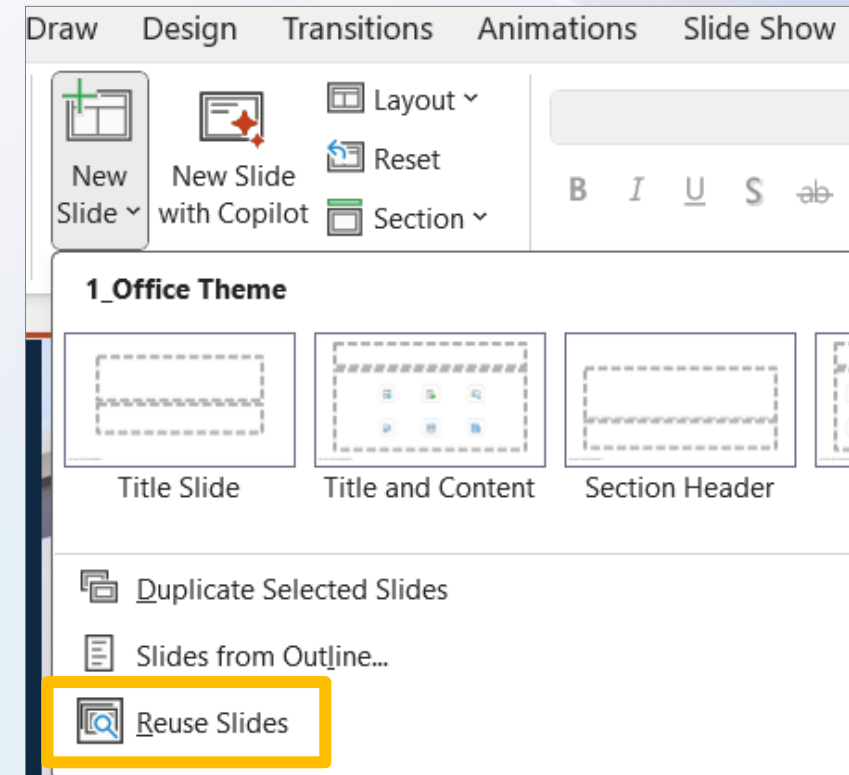

PowerPoint for Windows: Deprecation of Reuse Slides button in the ribbon

Microsoft is **retiring the Reuse Slide feature from the PowerPoint Ribbon**, requiring users to reuse content by copying and pasting slides or duplicating presentations.

Organizations should notify users about this change and encourage the adoption of alternative methods.

Reuse Slides option in PowerPoint

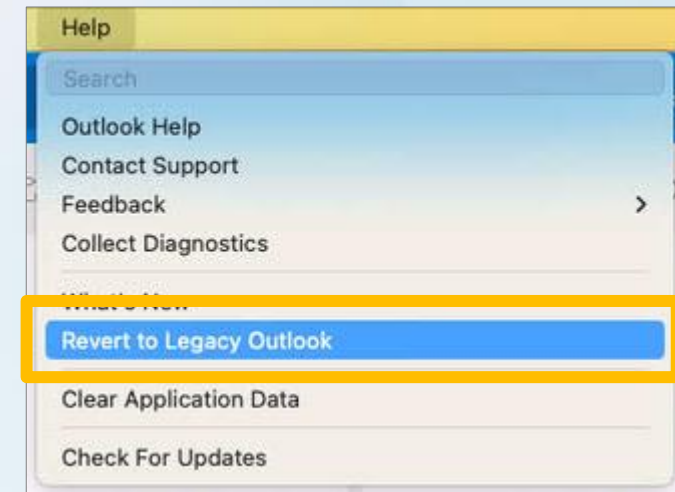

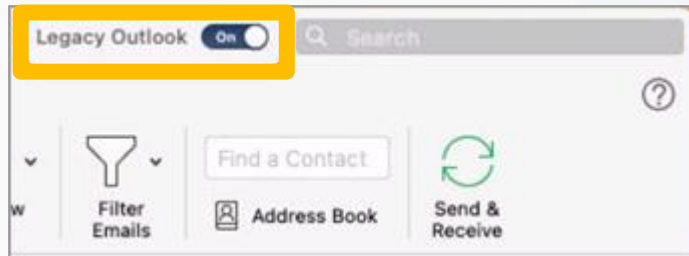

Outlook for Mac: Retiring the admin preference to switch to legacy Outlook

The **New Outlook for Mac will become the default experience for Current Channel users**, retiring the admin preference key EnableNewOutlook.

Organizations should notify users of this change and update training materials.

Revert to Legacy Outlook option

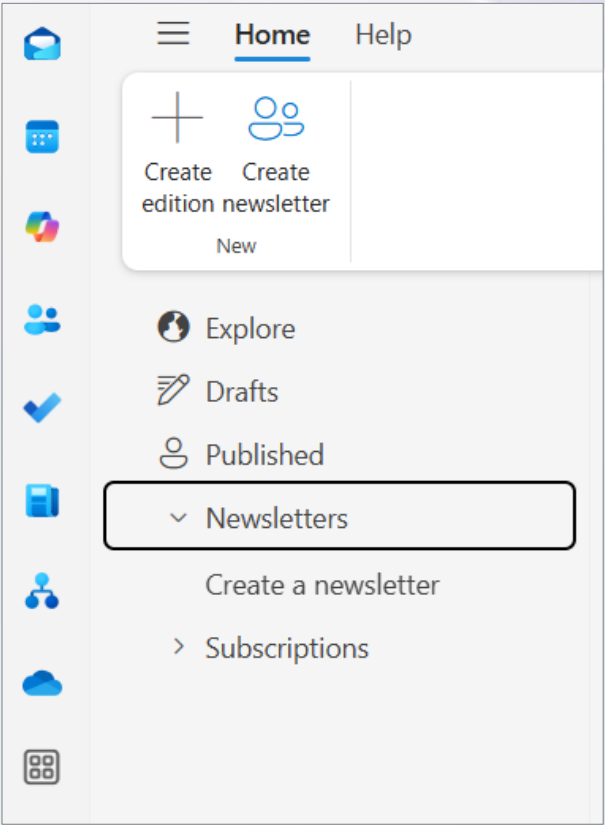

New Outlook for Windows and Web: Outlook Newsletters moving to General Availability (GA)

Outlook Newsletters is now rolling out, allowing users to **create and share recurring email updates internally** by default.

Admins should review OwaMailboxPolicy settings to manage feature access levels.

Newsletter option in Outlook

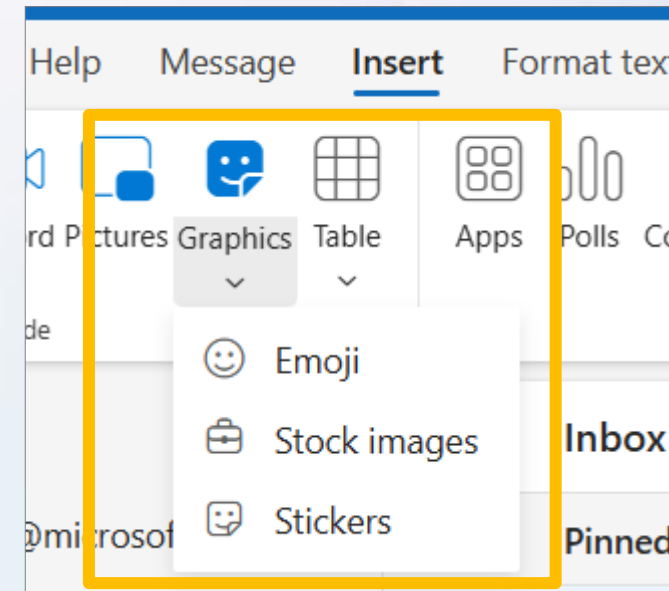

New Outlook for Windows and Web: New Graphics button

When composing a message in the new Outlook for Windows and Outlook on the web, there will be **a new Graphics button** under the Insert ribbon tab.

- This opens a panel that will **allow users to search and pick from a large selection of emoji, stock photos, and stickers**, which are inserted into the message when selected.

Graphics option in the Outlook ribbon

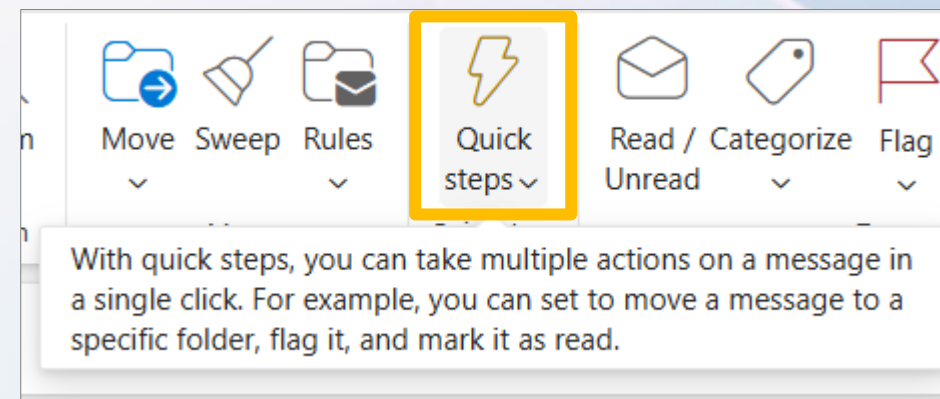

New Outlook for Windows and Web: Quick steps in the pop-out ribbon

Quick Steps are now integrated into the **ribbon** of email pop-out ribbon in the new Outlook for Windows and Web.

- Users can **access and execute their configured Quick Steps directly while reading emails** in separate windows.

Quick steps option in the Outlook ribbon

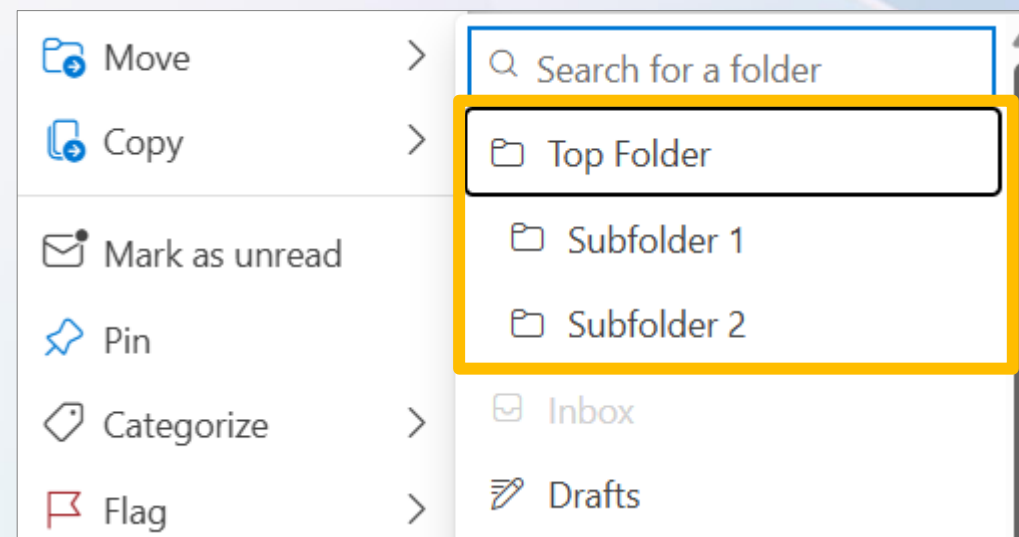

New Outlook for Windows and Web: Expand and collapse folders when moving emails

Users can now **expand and collapse folder trees in the move/copy email dialog**.

- This makes it **easier to navigate large folder structures** and **find the right destination faster**, improving efficiency and control during email triage.

Expand and collapse folders in the move / copy menu

New Outlook for Windows: "Play a sound" rule

You will be able to **set up Outlook rules to play a sound** whenever an email that matches your chosen conditions arrives:

- whether it's from a specific person, includes certain words, or meets any other rule criteria you define.
- This feature helps you **stay alerted to the emails that matter most**.

Outlook for Web: New Account Manager feature

Users can use **the new Account Manager** feature to learn more about their Microsoft account, **display their profile picture, and add new accounts** (if permitted by their organization).

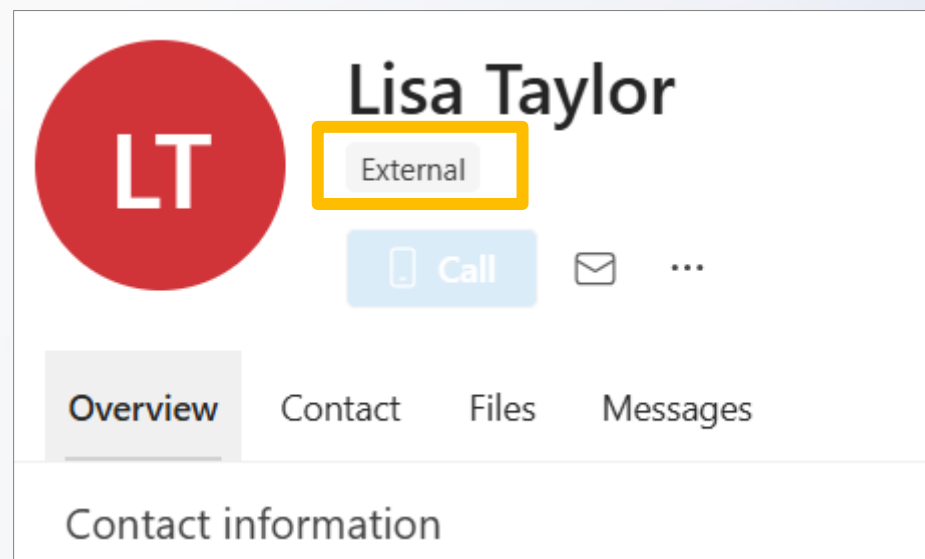

Managing accounts in Outlook for web

Outlook for Web: External tag in profile cards

For **users that are external** to your organization, an **"External"** tag will be shown in the top part of their profile card.

External tag shown in the profile card

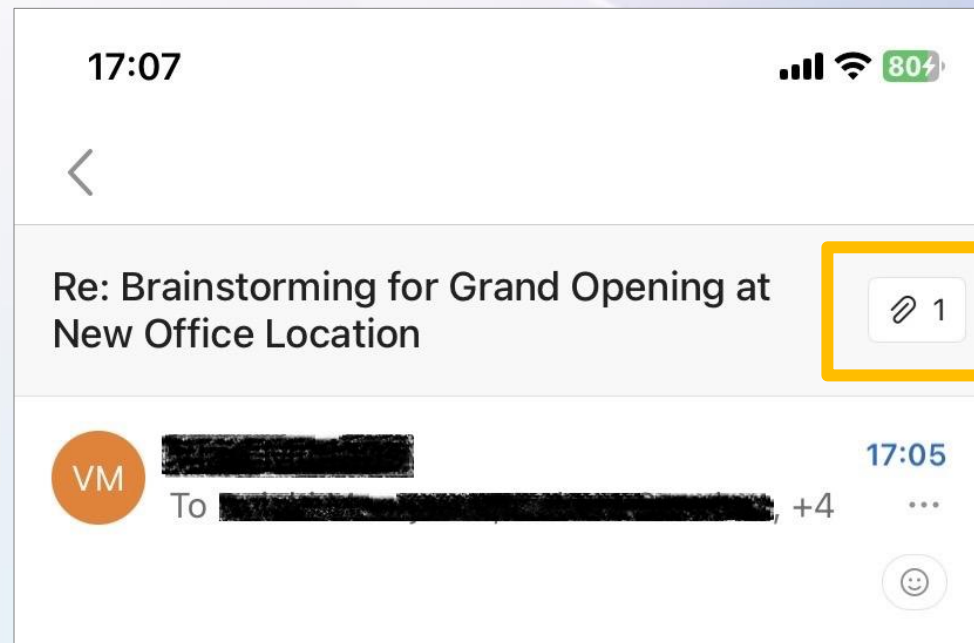

Outlook for iOS and Android: Browse conversation files

This feature makes it **easy for users to find and access all files within a conversation thread**.

- Instead of scrolling through each message to locate attachments, users can quickly **view and manage all files in one place**, accessed from the top of the conversation.

Attachments at the top of conversations in Outlook for iOS

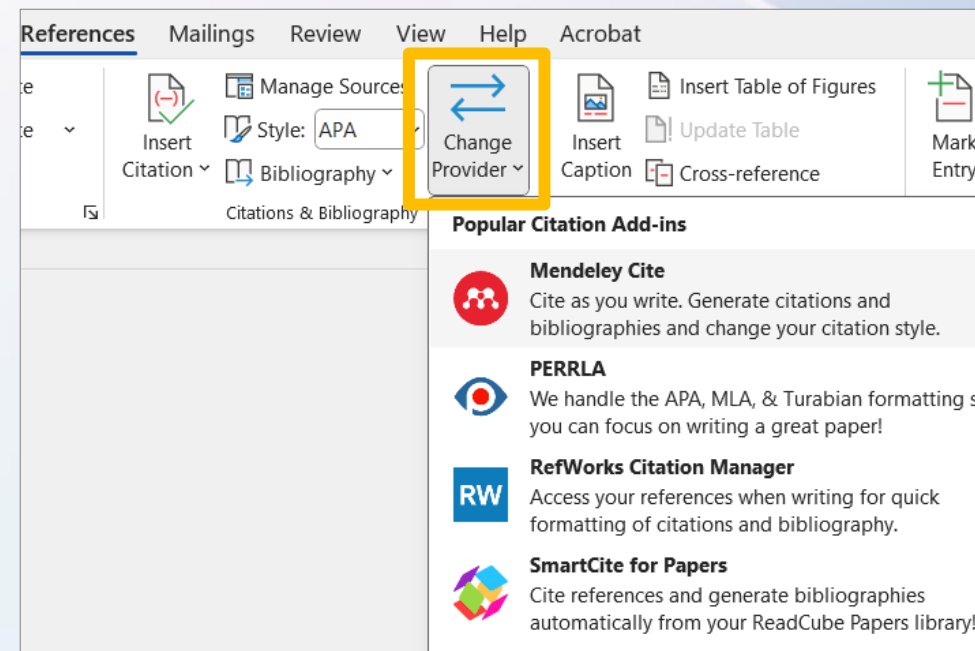

Microsoft Word: Third-party citation add-ins under the References tab

Microsoft Word is introducing **a new entry point in the References tab** to help users discover both built-in and third-party citation tools.

Organizations using custom citation tools should **review third-party options for compliance alignment**.

Third-party citation add-ins and their location within the References tab

Event Updates	491018	If an organizer updates an event that you have been invited to, you will now see Event Updated in the email and the updated location if applicable.	June 2025
Report junk + block or unsubscribe in one same action	495469	We're making it easier to keep your inbox clean and under control. Now, when you report an email as junk, you'll also have the option to unsubscribe—if that's available. This helps stop unwanted messages at the source and keeps your blocked list from getting overloaded. If unsubscribing isn't possible, you'll still be able to block the sender to prevent future emails.	July 2025
Mail Categories	493945	Users will be able to assign and remove categories to mails on Android devices.	June 2025
Product transitions to the cloud.microsoft domain	MC1108835	Microsoft products like Visio are now available on the cloud.microsoft domain, enhancing security and creating a unified domain space. Admins should ensure connections to *.cloud.microsoft are not blocked and consider updating any references to old URLs to prevent confusion.	June 2025
Add attachments while offline in the new Outlook for Windows	496371	We are adding more functionality to offline mode in the new Outlook for Windows. You will now be able to add attachments while drafting your email without an internet connection.	August 2025

Drag and drop files between accounts as attachments	493289	You will now be able to drag emails and files from one account and drop them in another account as attachments in the new Outlook for Windows.	July 2025
Contact Improvements on Outlook Mobile	493753	On Outlook mobile we are improving the "Contacts" experience by showing additional profile information for your contacts, where applicable. Secondly, this improvement hides identical duplicate contacts.	July 2025
Microsoft Places Support to GCC cloud	495465	Microsoft Places features will now be available in GCC cloud	August 2025
Insert Graphic	495467	When composing a message in the new Outlook for Windows and Outlook on the web, there will be a new Graphics button under the Insert ribbon tab. This opens a panel that will allow users to search and pick from a large selection of emoji, stock photos, and stickers, which are inserted into the message when selected.	August 2025
Show teammates' calendars in the left navigation pane	495468	Users can now see their teammates' calendars (including peers, direct reports, and managers) automatically displayed in the left navigation pane of the new outlook.	August 2025

Browse Conversation Files	496592	This feature makes it easy for users to find and access all files within a conversation thread. Instead of scrolling through each message to locate attachments, users can quickly view and manage all files in one place, accessed from the top of the conversation.	July 2025
Expand and collapse folders when moving emails	497418	Users can now expand and collapse folder trees in the move/copy email dialog. This makes it easier to navigate large folder structures and find the right destination faster, improving efficiency and control during email triage.	October 2025
Account Manager	497546	Users can use the new Account Manager feature to learn more about their Microsoft account, display their profile picture, and add new accounts (if permitted by their organization).	August 2025
Offline Support for Calendar - Create, Edit and Delete Event support	MC1101906	The new Outlook for Windows will support creating, editing, and deleting single calendar events offline, enhancing productivity. Ensure offline mode is enabled for users who need this functionality in their settings.	July 2025
Outlook: Report junk + block or unsubscribe in one same action	495469	Users can now unsubscribe from senders when reporting an email as junk, if supported, enhancing inbox management and reducing blocked sender lists. No admin action is required.	July 2025

Outlook for Android: Save an event as a Draft	496595	You can save a meeting as a draft on your calendar if you aren't ready to send the meeting invites. When composing an event with at least one attendee added, select dismiss and then select Save as a Draft. The draft event will show on your calendar as Draft along with the title of the event.	July 2025
Text Prediction turned off by default in Outlook	MC1093235	Microsoft is updating the Text Prediction feature in Outlook, turning it off by default for New Outlook for Windows, Outlook on the web, and for new users on Outlook for iOS and Android. Admins should inform users of this change and guide them on how to re-enable the feature if desired.	July 2025
Outlook for web: Show teammates' calendars in the left navigation pane	495468	Users can now see their teammates' calendars (including peers, direct reports, and managers) automatically displayed in the left navigation pane of the new outlook.	August 2025
Enterprise and Web Grounding for Draft with Copilot	497670	Draft with Copilot now has access to your enterprise data to help you craft high quality emails grounded in the right context. You will be able to review the sources used to generate your email draft before you send the mail.	September 2025
Immersive Search	498319	After completing a search in Outlook, a user will see a Copilot entry point that will take them to an LLM generated summary of their search query (emails, Teams messages and documents) within their Copilot side pane. They will be able to interact further with Copilot to dig deeper into these results and take action items accordingly.	August 2025

Outlook Mobile: New unverified sender banner in reading pane	MC1112452	Outlook Mobile is adding a visual indicator in the reading pane to warn users about emails from unverified senders, ensuring consistency with desktop and web versions.	July 2025
Excel: Organization Data Types retire starting July 31, 2025	MC1107494	Microsoft is retiring Organization Data Types in Excel for Microsoft 365, encouraging the use of Power BI and custom Excel add-ins instead. Organizations should connect Excel to Power BI and explore custom add-in solutions if they rely on these data types.	July 2025

[Embracing the future:
Transitioning to new Outlook for
Windows](#)

Microsoft is transitioning users to the new Outlook for Windows, offering enhanced features and integration while maintaining support for the classic app to ensure a smooth migration experience.

[What's New in Excel \(June 2025\)](#)

Excel introduces new features, including XLOOKUP enhancements, LAMBDA improvements, and expanded data types for enhanced functionality and user experience.

[Smarter Context Awareness for
Copilot in Excel](#)

Copilot in Excel has been enhanced with smarter context awareness, enabling more intuitive and efficient data handling and analysis.

[Text Analysis in Excel](#)

The Excel blog post introduces new text analysis features allowing users to gain insights from text data using capabilities like text summarization, sentiment analysis, and key phrase extraction directly within Excel.

[What's New in Excel \(November
2024\)](#)

Excel's latest update introduces new features including enhanced formula suggestions, improved charting capabilities, and additional data analysis tools, optimizing user experience and productivity.

[Introducing the new Get Data dialog and OneLake catalog in Excel for Windows](#)

Excel introduces a new Get Data dialog and OneLake data hub, enhancing data import capabilities and integration with various data sources.

[Summarize transferred calls in Teams with Copilot](#)

Microsoft Teams now integrates Copilot to summarize transferred calls, enhancing productivity by providing key details from conversations.

[Request more access in Word, Excel, and PowerPoint for the web](#)

The blog post introduces a new feature in Word, Excel, and PowerPoint for the web that allows users to request more access directly within the app when they don't have sufficient permissions to a shared file.

[Customize your email actions toolbar in Outlook for Android and iOS](#)

Outlook for Android and iOS now allows users to customize their email actions toolbar for quicker access to preferred actions.

[Microsoft 365 Insider's guide to ISTE Live 25 and ASCD Annual 25](#)

Microsoft 365 Insiders share highlights and key takeaways from ISTE Live 25 and ASCD Annual 25 conferences, emphasizing educational innovations and new technology integrations.

[Reference PDF and TXT files when creating presentations with Microsoft 365 Copilot in PowerPoint](#)

You can now use PDF and TXT files as reference materials when creating presentations with Microsoft 365 Copilot in PowerPoint.

[Introducing the Microsoft 365 Copilot App Learning Series](#)

Microsoft 365 introduces the Copilot App Learning Series to help users maximize the potential and functionality of the Microsoft 365 Copilot experience.

[Search for templates in Word, Excel, and PowerPoint for iOS](#)

Microsoft 365 is enhancing iOS apps by enabling users to search for templates directly within Word, Excel, and PowerPoint, streamlining document creation on mobile devices.

[Find skill-building volunteer opportunities with Microsoft Copilot](#)

Explore skill-building volunteer opportunities through Microsoft Office, helping users to connect with causes and enhance their skills.

[Trim a video by editing the transcript in Clipchamp](#)

Clipchamp now allows users to trim videos by editing the transcript, enhancing video editing capabilities by synchronizing narrative changes directly with video content.

Enhance your presentation skills with seven expert tips using Microsoft 365 tools, aimed at improving clarity, engagement, and delivery.

Exchange Online

Exchange Online: Changing output format for some database properties in Exchange Online cmdlets

Exchange Online PowerShell cmdlets' property output formats are being updated for improved performance and service alignment. Review any scripts parsing these property values for compatibility.

This update changes the string format of specific properties returned by Exchange Online cmdlets.

- For example, the Database property in the output of Get-Mailbox will change from:

Database: APCP153DG038-db080

to:

Database: APCP153.PROD.OUTLOOK.COM/7ad9dea1-26b7-4088-ad73-708c219faff6

Exchange Online: Releasing Multi-Geo In-Region Routing (IRR)

Microsoft 365 is introducing **Multi-Geo In-Region Routing (IRR) for Exchange Online** to help organizations align email routing with regional data residency requirements. Organizations should prepare by configuring accepted domains for specific geo-regions and reviewing data policies to ensure compliance.

Exchange Online: SMTP onboarding to App Role-Based Access Control (RBAC)

Admins can now **assign the SMTP.SendAsApp role to an app through App Role-Based Access Control (RBAC)**, enabling group-based or scoped access to mailboxes. This eliminates the need for per-mailbox configuration and streamlines onboarding for SMTP clients using OAuth.

No public documentation at the time of writing

Exchange Online: "Mail Bombing" detection technology in Microsoft Defender for Office 365

[MC1096885](#)

Microsoft Defender for Office 365 now includes a "Mail Bombing" detection feature that automatically detects and blocks attacks flooding mailboxes with excessive emails, helping security teams focus on genuine threats.

July 2025

New Message Trace in Exchange Online

[495489](#)

Admins can access the new Message Trace and its capabilities by default when navigating to the Exchange Admin Center > Mail flow > Message Trace. Admins can also leverage the new Message Trace PowerShell cmdlets Get-MessageTraceV2 and Get-MessageTraceDetailV2.

June 2025

Important Update to the Get-FederationInformation Cmdlet in Exchange Online

[MC1081538](#)

Microsoft is updating the Get-FederationInformation cmdlet in Exchange Online to limit the scope of domain data returned. Review and update any scripts or tools using this cmdlet to ensure they pass the required domain(s) as parameters.

July 2025

[Announcing Exchange 2016 / 2019 Extended Security Update program](#)

Microsoft has announced the Extended Security Update program for Exchange Server 2016 and 2019 to provide critical security updates beyond the standard support lifecycle.

[Reduced License Count Requirement for Exchange Online Delicensing Resiliency Feature](#)

Microsoft has lowered the license count requirement for Exchange Online to make it more accessible to organizations with fewer users.

[Introducing more control over Direct Send in Exchange Online](#)

Microsoft has enhanced Exchange Online by providing administrators with more control over the direct send feature, improving email delivery management and security.

[Exchange Server Subscription Edition \(SE\) is now available](#)

Exchange Server Subscription Edition (SE) is now available, offering enhanced security, compliance, and performance features for organizations.

SharePoint Online

Updates to custom scripting in sites and Classic Publishing site creation

SharePoint Online is disabling custom scripting by default for certain classic publishing site templates and restricting the creation of new classic publishing-related site collections.

- Organizations should inform site owners of these changes, promote modern site usage, and use PowerShell to manage exceptions temporarily.

Custom scripts

Allowing users to add scripts can give them more flexibility to customize sites, but you can't audit the scripts or block them from running after they've been added. We recommend limiting the use of custom scripts for security reasons.

[Learn more about allowing custom scripts](#)

 When you set the custom scripts setting to Allowed, it will automatically switch back to Blocked within 24 hours.

Custom scripts setting

- ☒ **Blocked**
Users can't add custom scripts to pages on this site. Previously added scripts can still run.
- ☐ **Allowed**
Users such as site owners who have 'Add and Customize Pages' permission to this site or one of its pages can add scripts.

New file format support for SharePoint Online Content AI document translation

Microsoft 365 expands Content AI document translation in SharePoint Online by supporting new file formats like Markdown, web archives, open formats, structured data, and localization files, enhancing translation capabilities.

The following formats are now supported:

- Markdown files: .mdown, .mdtext, .mdtxt, .mdwn, .mkd, .mkdn
- Web archive formats: .mht, .mhtml
- Open formats: .odt (OpenDocument Text), .rmd (R Markdown)
- Structured data: .tab, .tsv
- Localization formats: .xlf (XLIFF)

Improved processing visibility for Content AI models in SharePoint Online: Autofill and Document Translation

Microsoft 365 is introducing **a new activity pane in SharePoint Online for enhanced visibility into Content AI model processing**, offering real-time insights and improved troubleshooting.

- Key capabilities include:
- Real-time status tracking
 - Detailed processing outcomes
 - Error transparency
 - Filtering and history
 - Improved user experience

SharePoint: Site attestation

Site attestation policy is the newest addition to the site lifecycle management suite. It is a one-stop solution to ensure your sites are secure and compliant by reducing the risk of unmanaged sites.

- This involves **regular reviews by site owners or admins** to check and confirm the accuracy of site information, including the site's necessity, its owners, members, permissions, and sharing settings.
- You can **also choose to automate actions on sites** that remain unattested for more than 3 months to prevent risks of content over exposure.

The policy enables automated and periodic reviews of site's settings, such as ownership, members, permissions, and sharing settings

Site lifecycle management PRO

Create and manage policies that automate tasks across the life cycle of your sites.

Power Platform: Information regarding the ability to re-enable customer-managed key locked environments

Administrators will soon be able **to manually re-enable customer-managed key locked environments via the Power Platform Admin Center**, helping manage environments affected by unhealthy Enterprise policies.

The screenshot displays the Power Platform Admin Center interface. The left sidebar shows the 'Manage' section with various options like Environment groups, Tenant settings, Data, and Products. The main content area shows the details for a specific environment named 'CmkTestRecoverMetadataEnv'. The 'Details' section lists various attributes including Environment URL, Region, Type, Organization ID, and Environment ID. The 'State' is listed as 'Disabled'. A yellow box highlights a 'Environment disabled' notification on the right, which states: 'This Sandbox environment was disabled due to an unhealthy enterprise policy.' Below this notification is a 'Re-enable environment' button. The bottom right section shows 'Access' information, including Security roles, Teams, Users, S2S apps, and Business units.

Power Platform Admin Center: The agent inventory page is now available for Public Preview

The **agent inventory page** for the Power Platform Admin Center is now **in Public Preview**, allowing admins to efficiently manage and organize agent data.

Tenant-level analytics must be enabled and tenant administrators can access the page for use.

The screenshot shows the Power Platform Admin Center interface. The left sidebar contains navigation options: Home, Actions, Manage (highlighted), Security, Copilot, Monitor, Deployment, Licensing, and Support. The 'Manage' section includes sub-options: Environments, Environment groups, Tenant settings, Data, Data (preview), Data integration, Data export, Products, Power Apps, Power Automate, Power Pages, Dynamics 365 Apps, and Copilot Studio (highlighted with a yellow box). The main content area displays the 'Copilot Studio' page, marked as 'PREVIEW'. It includes a search bar and a toggle for 'New admin center'. Below this, a table lists 35 agents with columns for Agent name, Owner, Modified on, Created on, Environment, and Environment type. The first row shows 'MartinPowerPage bot' as the owner, and subsequent rows show 'Copilot in Power Ap...' as the owner. The environments listed include Production, Developer, and Default.

Agent name	Owner	Modified on	Created on	Environment	Environment type
MartinPowerPage bot	a8d122ba-d7ba-4e...	05/14/25	05/14/25		Production
